❖ ONE ❖

Common Sense

LET us see how the writing of *Common Sense* came about. It was in November of 1774 that Paine landed in Philadelphia, a sick and almost beaten man. Five months later, at Lexington, the first real encounter of the American Revolution occurred; that and the Battle of Concord Bridge and the retreat of the British to Boston set into motion a popular people's uprising; two months later, an army of angry New England farmers was hanging onto the flanks of Boston like a pack of wolves, and within Boston the British army of occupation was worriedly on the defensive. And seven months later, there appeared all over the land a slim booklet, entitled *Common Sense*. And by April of 1776, almost every adult in the thirteen colonies had read or had read to him some part of the booklet. In December of 1775, only wild-eyed radicals called for independence; six months later only the most conservative elements—and few they were—of the American popular front stood out against independence. In that six-month period, the country united itself, tightened itself, and set its face solidly against the enemy, the loose alliance of thirteen far-flung colonies becoming a solid coalition.

And by testimony of many, not a little of this was due to the slim book Tom Paine wrote.

His arrival in America was not auspicious. He came to shore sick, unshaven, almost penniless. When he recovered his health, he worked at many things but not staymaking: odds and ends of jobs, teaching, free lance writing, letter writing. But he looked at the

country. He cocked an ear, and he listened. The speech was English, but the dialect was different. The turn of a phrase was bold and sure, and the tall people walked with their heads high. Very tall people; they ate quantities of fresh meat, fresh vegetables. No one pulled a forelock. The speech was English, but the tone was different. What talk—what endless talk! Liberty, freedom, inalienable rights! You may be sure that he listened. Perhaps he read Locke and Voltaire; perhaps he didn't have to read them, since their ideas, in homely phrases, were on every tongue.

Then he found himself a good job. Robert Aitken, a Philadelphia printer, had the idea of a publication to be called *The Pennsylvania Magazine*, and Paine, the Englishman, talked himself into the job of editor.

True, he had no experience at that sort of thing; he must have convinced Aitken in some way, perhaps by showing him the things he had written, perhaps by talking to him. At any rate, under Paine's editorship, the magazine gained a position of some influence, not only in Pennsylvania but in many outlying colonies. Paine himself wrote for the magazine, some things under his own name, some under other names.

During this time, life, for Tom Paine, moved at a tremendously accelerated pace. Keep in mind that his whole personality revolved around the conception of change; for thirty-seven years of his life, change had resisted him and the people about him. And now, here in America, was a situation that changed so rapidly the average person had trouble keeping pace with it. As an editor, Paine met and spoke with people he could not have otherwise known. Washington, Jefferson, Rush, Franklin, Randolph, Sam Adams—how many long hours were spent arguing, discussing, understanding! Paine was an Englishman; that made him a sort of sounding board, for most of the patriots were American born and bred, and they had none too clear a conception of what the old country was like. To them, the American situation was matter of fact; it had come to a head as slowly as a cist; to them, America was their habitat; to Paine, the lower-class Englishman, it was utopia arriving. They didn't realize what a treasure chest they possessed until Paine, like a miser, added and added every asset that was America. The rich

man can't conceive poverty. Their America, their boundless, rich and wonderful land had always been; it always would be. Paine cried: "No! No! You'll lose it—and if you lose it here, all the world loses!"

The idea became an obsession with him. He found it inconceivable that while a few hundred miles to the north, in the colony of Massachusetts, bitter war raged, men here in Pennsylvania could calmly debate the whys and wherefors of union, independence, and resistance. For him, again, it was a matter of dynamics; forces were at work; new forces must be added. A blow must be struck. Nothing "happened"; men took advantage of a situation and consciously made history.

He was an Englishman. These Americans were fools; they were fools to think that the spark they had lit concerned only them; it concerned the whole world; it concerned men of good will in every land. Even then Paine foresaw the international character which the American struggle would assume. They, the patriots, said independence was impossible. Did the impossible exist until it was attempted? They said union was impossible. But if it was impossible, then so was hope—and that Paine would never admit.

He left the *Pennsylvania Magazine*, and, a few shillings in his jeans, he set out to write the case of *America against tyranny and for mankind*. And because to him it was so obvious, so natural a progression of history, of all man's struggles, he knew before he began that it would be called *Common Sense*.

He wrote simply, yet with a shrewd turn for the practical that Yankees would love. When he reasoned, he was calm and cold; when he exhorted, by God, he exhorted. He called names, because those he was against, he hated. No grays for him; black was black, white was white, and a Tory, a reactionary, was a cursed enemy of mankind. He was no sentimentalist, no idealist; a realist, he wrote for the most realistic people he knew, and he wrote in a language they would understand. He was not interested in originating a philosophy; he intended only to turn what democratic philosophy existed into a program of action for men with guns.

And he succeeded. When he had finished the manuscript, he set about finding a printer. His old friend and former employer, Aitken,

turned him down. This was fire—incitement to rebellion. Benjamin Rush and others read the manuscript and realized that here, perhaps, was some of the heat that would fuse the colonies into a united whole. Yet in their wildest dreams, they could not have foreseen the results of the small book.

Through Rush, Robert Bell, a small printer, was persuaded to print the booklet. And early in January, 1776, without fuss or fanfare, there appeared the work entitled *COMMON SENSE* *written by an Englishman*.

Common Sense

ON THE ORIGIN AND DESIGN OF GOVERNMENT IN GENERAL, WITH
CONCISE REMARKS ON THE ENGLISH CONSTITUTION

SOME writers have so confounded society with government, as to leave little or no distinction between them; whereas they are not only different, but have different origins. Society is produced by our wants, and government by our wickedness; the former promotes our happiness *positively* by uniting our affections, the latter *negatively* by restraining our vices. The one encourages intercourse, the other creates distinctions. The first is a patron, the last a punisher.

Society in every state is a blessing, but Government, even in its best state, is but a necessary evil; in its worst state an intolerable one: for when we suffer, or are exposed to the same miseries *by a Government*, which we might expect in a country *without Government*, our calamity is heightened by reflecting that we furnish the means by which we suffer. Government, like dress, is the badge of lost innocence; the palaces of kings are built upon the ruins of the bowers of paradise. For were the impulses of conscience clear, uniform and irresistibly obeyed, man would need no other lawgiver; but that not being the case, he finds it necessary to surrender up a part of his property to furnish means for the protection of the rest; and this he is induced to do by the same prudence which in every other case advises him, out of two evils to choose the least. Wherefore, security being the true design and end of government, it unanswerably follows that whatever form thereof appears most likely to ensure it to us, with the least expense and greatest benefit, is preferable to all others.

In order to gain a clear and just idea of the design and end of govern-

ment, let us suppose a small number of persons settled in some sequestered part of the earth, unconnected with the rest; they will then represent the first peopling of any country, or of the world. In this state of natural liberty, society will be their first thought. A thousand motives will excite them thereto; the strength of one man is so unequal to his wants, and his mind so unfitted for perpetual solitude, that he is soon obliged to seek assistance and relief of another, who in his turn requires the same. Four or five united would be able to raise a tolerable dwelling in the midst of a wilderness, but one man might labour out the common period of life without accomplishing any thing; when he had felled his timber he could not remove it, nor erect it after it was removed; hunger in the mean time would urge him to quit his work, and every different want would call him a different way. Disease, nay even misfortune, would be death; for, though neither might be mortal, yet either would disable him from living, and reduce him to a state in which he might rather be said to perish than to die.

Thus necessity, like a gravitating power, would soon form our newly arrived emigrants into society, the reciprocal blessings of which would supercede, and render the obligations of law and government unnecessary while they remained perfectly just to each other; but as nothing but Heaven is impregnable to vice, it will unavoidably happen that in proportion as they surmount the first difficulties of emigration, which bound them together in a common cause, they will begin to relax in their duty and attachment to each other: and this remissness will point out the necessity of establishing some form of government to supply the defect of moral virtue.

Some convenient tree will afford them a State House, under the branches of which the whole Colony may assemble to deliberate on public matters. It is more than probable that their first laws will have the title only of Regulations and be enforced by no other penalty than public disesteem. In this first parliament every man by natural right will have a seat.

But as the Colony encreases, the public concerns will encrease likewise, and the distance at which the members may be separated, will render it too inconvenient for all of them to meet on every occasion as at first, when their number was small, their habitations near, and the public concerns few and trifling. This will point out the convenience of their consenting to leave the legislative part to be managed by a select number chosen from the whole body, who are supposed to have the same concerns at stake which those have who appointed them, and who will

act in the same manner as the whole body would act were they present. If the colony continue encreasing, it will become necessary to augment the number of representatives, and that the interest of every part of the colony may be attended to, it will be found best to divide the whole into convenient parts, each part sending its proper number: and that the *elected* might never form to themselves an interest separate from the *electors*, prudence will point out the propriety of having elections often: because as the *elected* might by that means return and mix again with the general body of the *electors* in a few months, their fidelity to the public will be secured by the prudent reflection of not making a rod for themselves. And as this frequent interchange will establish a common interest with every part of the community, they will mutually and naturally support each other, and on this, (not on the unmeaning name of king,) depends the *strength of government, and the happiness of the governed*.

Here then is the origin and rise of government; namely, a mode rendered necessary by the inability of moral virtue to govern the world; here too is the design and end of government, viz. Freedom and security. And however our eyes may be dazzled with show, or our ears deceived by sound; however prejudice may warp our wills, or interest darken our understanding, the simple voice of nature and reason will say, 'tis right.

I draw my idea of the form of government from a principle in nature which no art can overturn, viz. that the more simple any thing is, the less liable it is to be disordered, and the easier repaired when disordered; and with this maxim in view I offer a few remarks on the so much boasted constitution of England. That it was noble for the dark and slavish times in which it was erected, is granted. When the world was overrun with tyranny the least remove therefrom was a glorious rescue. But that it is imperfect, subject to convulsions, and incapable of producing what it seems to promise, is easily demonstrated.

Absolute governments, (tho' the disgrace of human nature) have this advantage with them, they are simple; if the people suffer, they know the head from which their suffering springs; know likewise the remedy; and are not bewildered by a variety of causes and cures. But the constitution of England is so exceedingly complex, that the nation may suffer for years together without being able to discover in which part the fault lies; some will say in one and some in another, and every political physician will advise a different medicine.

I know it is difficult to get over local or long standing prejudices, yet

if we will suffer ourselves to examine the component parts of the English constitution, we shall find them to be the base remains of two ancient tyrannies, compounded with some new Republican materials.

First.—The remains of Monarchical tyranny in the person of the King.

Secondly.—The remains of Aristocratical tyranny in the persons of the Peers.

Thirdly.—The new Republican materials, in the persons of the Commons, on whose virtue depends the freedom of England.

The two first, by being hereditary, are independent of the People; wherefore in a *constitutional sense* they contribute nothing towards the freedom of the State.

To say that the constitution of England is an *union* of three powers, reciprocally *checking* each other, is farcical; either the words have no meaning, or they are flat contradictions.

To say that the Commons is a check upon the King, presupposes two things.

First.—That the King it not to be trusted without being looked after; or in other words, that a thirst for absolute power is the natural disease of monarchy.

Secondly.—That the Commons, by being appointed for that purpose, are either wiser or more worthy of confidence than the Crown.

But as the same constitution which gives the Commons a power to check the King by withholding the supplies, gives afterwards the King a power to check the Commons, by empowering him to reject their other bills; it again supposes that the King is wiser than those whom it has already supposed to be wiser than him. A mere absurdity!

There is something exceedingly ridiculous in the composition of Monarchy; it first excludes a man from the means of information, yet empowers him to act in cases where the highest judgment is required. The state of a king shuts him from the World, yet the business of a king requires him to know it thoroughly; wherefore the different parts, by unnaturally opposing and destroying each other, prove the whole character to be absurd and useless.

Some writers have explained the English constitution thus: the King, say they, is one, the people another; the Peers are a house in behalf of the King, the commons in behalf of the people; but this hath all the distinctions of a house divided against itself; and though the expressions be pleasantly arranged, yet when examined they appear idle and ambiguous; and it will always happen, that the nicest construction that words are

capable of, when applied to the description of something which either cannot exist, or is too incomprehensible to be within the compass of description, will be words of sound only, and though they may amuse the ear, they cannot inform the mind: for this explanation includes a previous question, viz. *how came the king by a power which the people are afraid to trust, and always obliged to check?* Such a power could not be the gift of a wise people, neither can any power, *which needs checking*, be from God; yet the provision which the constitution makes supposes such a power to exist.

But the provision is unequal to the task; the means either cannot or will not accomplish the end, and the whole affair is a *Felo de se*: for as the greater weight will always carry up the less, and as all the wheels of a machine are put in motion by one, it only remains to know which power in the constitution has the most weight, for that will govern: and tho' the others, or a part of them, may clog, or, as the phrase is, check the rapidity of its motion, yet so long as they cannot stop it, their endeavours will be ineffectual: The first moving power will at last have its way, and what it wants in speed is supplied by time.

That the crown is this overbearing part in the English constitution needs not be mentioned, and that it derives its whole consequence merely from being the giver of places and pensions is self-evident; wherefore, though we have been wise enough to shut and lock a door against absolute Monarchy, we at the same time have been foolish enough to put the Crown in possession of the key.

The prejudice of Englishmen, in favour of their own government, by King, Lords and Commons, arises as much or more from national pride than reason. Individuals are undoubtedly safer in England than in some other countries: but the will of the king is as much the law of the land in Britain as in France, with this difference, that instead of proceeding directly from his mouth, it is handed to the people under the formidable shape of an act of parliament. For the fate of Charles the First hath only made kings more subtle—not more just.

Wherefore, laying aside all national pride and prejudice in favour of modes and forms, the plain truth is that *it is wholly owing to the constitution of the people, and not to the constitution of the government* that the crown is not as oppressive in England as in Turkey.

An inquiry into the *constitutional errors* in the English form of government, is at this time highly necessary; for as we are never in a proper condition of doing justice to others, while we continue under the influence of some leading partiality, so neither are we capable of doing it to

ourselves while we remain fettered by any obstinate prejudice. And as a man who is attached to a prostitute is unfitted to choose or judge of a wife, so any prepossession in favour of a rotten constitution of government will disable us from discerning a good one.

OF MONARCHY AND HEREDITARY SUCCESSION

MANKIND being originally equals in the order of creation, the equality could only be destroyed by some subsequent circumstance: the distinctions of rich and poor may in a great measure be accounted for, and that without having recourse to the harsh ill-sounding names of oppression and avarice. Oppression is often the *consequence*, but seldom or never the *means* of riches; and tho' avarice will preserve a man from being necessarily poor, it generally makes him too timorous to be wealthy.

But there is another and great distinction for which no truly natural or religious reason can be assigned, and that is the distinction of men into **KINGS** and **SUBJECTS**. Male and female are the distinctions of nature, good and bad the distinctions of Heaven; but how a race of men came into the world so exalted above the rest, and distinguished like some new species, is worth inquiring into, and whether they are the means of happiness or of misery to mankind.

In the early ages of the world, according to the scripture chronology there were no kings; the consequence of which was, there were no wars; it is the pride of kings which throws mankind into confusion. Holland, without a king hath enjoyed more peace for this last century than any of the monarchical governments in Europe. Antiquity favours the same remark; for the quiet and rural lives of the first Patriarchs have a snappy something in them, which vanishes when we come to the history of Jewish royalty.

Government by kings was first introduced into the world by the Heathens, from whom the children of Israel copied the custom. It was the most prosperous invention the Devil ever set on foot for the promotion of idolatry. The Heathens paid divine honours to their deceased kings, and the Christian World hath improved on the plan by doing the same to their living ones. How impious is the title of sacred Majesty applied to a worm, who in the midst of his splendor is crumbling into dust!

As the exalting one man so greatly above the rest cannot be justified on the equal rights of nature, so neither can it be defended on the authority of scripture; for the will of the Almighty as declared by Gideon, and the prophet Samuel, expressly disapproves of government by Kings

All anti-monarchical parts of scripture, have been very smoothly glossed over in monarchical governments, but they undoubtedly merit the attention of countries which have their governments yet to form. *Render unto Cesar the things which are Cesar's* is the scripture doctrine of courts, yet it is no support of monarchical government, for the Jews at that time were without a king, and in a state of vassalage to the Romans.

Near three thousand years passed away, from the Mosaic account of the creation, till the Jews under a national delusion requested a king. Till then their form of government (except in extraordinary cases where the Almighty interposed) was a kind of Republic, administered by a judge and the elders of the tribes. Kings they had none, and it was held sinful to acknowledge any being under that title but the Lord of Hosts. And when a man seriously reflects on the idolatrous homage which is paid to the persons of kings, he need not wonder that the Almighty, ever jealous of his honour, should disapprove a form of government which so impiously invades the prerogative of Heaven.

Monarchy is ranked in scripture as one of the sins of the Jews, for which a curse in reserve is denounced against them. The history of that transaction is worth attending to.

The children of Israel being oppressed by the Midianites, Gideon marched against them with a small army, and victory thro' the divine interposition decided in his favour. The Jews, elate with success, and attributing it to the generalship of Gideon, proposed making him a king, saying, *Rule thou over us, thou and thy son, and thy son's son*. Here was temptation in its fullest extent; not a kingdom only, but an hereditary one; but Gideon in the piety of his soul replied, *I will not rule over you, neither shall my son rule over you*. THE LORD SHALL RULE OVER YOU. Words need not be more explicit: Gideon doth not decline the honour, but denieth their right to give it; neither doth he compliment them with invented declarations of his thanks, but in the positive style of a prophet charges them with disaffection to their proper Sovereign, the King of Heaven.

About one hundred and thirty years after this, they fell again into the same error. The hankering which the Jews had for the idolatrous customs of the Heathens, is something exceedingly unaccountable; but so it was, that laying hold of the misconduct of Samuel's two sons, who were intrusted with some secular concerns, they came in an abrupt and clamorous manner to Samuel, saying, *Behold thou art old, and they sons walk not in thy ways, now make us a king to judge us like all the other nations*. And here we cannot observe but that their motives were bad, viz. that

they might be *like* unto other nations, i. e. the Heathens, whereas their true glory lay in being as much *unlike* them as possible. *But the thing displeased Samuel when they said, give us a King to judge us; and Samuel prayed unto the Lord, and the Lord said unto Samuel, hearken unto the voice of the people in all that they say unto thee, for they have not rejected thee, but they have rejected me, THAT I SHOULD NOT REIGN OVER THEM.* According to all the works which they have done since the day that I brought them up out of Egypt even unto this day, wherewith they have forsaken me, and served other Gods: so do they also unto thee. Now therefore hearken unto their voice, howbeit, protest solemnly unto them and show them the manner of the King that shall reign over them, i. e. not of any particular King, but the general manner of the Kings of the earth whom Israel was so eagerly copying after. And notwithstanding the great distance of time and difference of manners, the character is still in fashion. *And Samuel told all the words of the Lord unto the people, that asked of him a King. And he said, This shall be the manner of the King that shall reign over you. He will take your sons and appoint them for himself for his chariots and to be his horsemen, and some shall run before his chariots (this description agrees with the present mode of impressing men) and he will appoint him captains over thousands and captains over fifties, will set them to ear his ground and to reap his harvest, and to make his instruments of war, and instruments of his chariots, And he will take your daughters to be confectionaries, and to be cooks, and to be bakers (this describes the expense and luxury as well as the oppression of Kings) and he will take your fields and your vineyards, and your olive yards, even the best of them, and give them to his servants. And he will take the tenth of your seed, and of your vineyards, and give them to his officers and to his servants (by which we see that bribery, corruption, and favouritism, are the standing vices of Kings) and he will take the tenth of your men servants, and your maid servants, and your goodliest young men, and your asses, and put them to his work: and he will take the tenth of your sheep, and ye shall be his servants, and ye shall cry out in that day because of your king which ye shall have chosen, AND THE LORD WILL NOT HEAR YOU IN THAT DAY.* This accounts for the continuation of Monarchy; neither do the characters of the few good kings which have lived since, either sanctify the title, or blot out the sinfulness of the origin; the high encomium of David takes no notice of him *officially* as a King, but only as a *man* after God's own heart. *Nevertheless the people refused to obey the voice of Samuel, and they said, Nay, but we will have a king over us, that we may be like all the*

nations, and that our king may judge us, and go out before us and fight our battles. Samuel continued to reason with them but to no purpose; he set before them their ingratitude, but all would not avail; and seeing them fully bent on their folly, he cried out, *I will call unto the Lord, and he shall send thunder and rain* (which was then a punishment, being in the time of wheat harvest) *that ye may perceive and see that your wickedness is great which ye have done in the sight of the Lord,* IN ASKING YOU A KING. *So Samuel called unto the Lord, and the Lord sent thunder and rain that day, and all the people greatly feared the Lord and Samuel. And all the people said unto Samuel, Pray for thy servants unto the Lord thy God that we die not,* for WE HAVE ADDED UNTO OUR SINS THIS EVIL, TO ASK A KING. These portions of scripture are direct and positive. They admit of no equivocal construction. That the Almighty hath here entered his protest against monarchical government is true, or the scripture is false. And a man hath good reason to believe that there is as much of kingcraft as priestcraft in withholding the scripture from the public in popish countries. For monarchy in every instance is the popery of government.

To the evil of monarchy we have added that of hereditary succession; and as the first is a degradation and lessening of ourselves, so the second, claimed as a matter of right, is an insult and imposition on posterity. For all men being originally equals, no one by birth could have a right to set up his own family in perpetual preference to all others for ever, and tho' himself might deserve some decent degree of honours of his contemporaries, yet his descendants might be far too unworthy to inherit them. One of the strongest natural proofs of the folly of hereditary right in Kings, is that nature disapproves it, otherwise she would not so frequently turn it into ridicule, by giving mankind an *Ass for a Lion*.

Secondly, as no man at first could possess any other public honors than were bestowed upon him, so the givers of those honors could have no power to give away the right of posterity, and though they might say "We choose you for our head," they could not without manifest injustice to their children say "that your children and your children's children shall reign over ours forever." Because such an unwise, unjust, unnatural compact might (perhaps) in the next succession put them under the government of a rogue or a fool. Most wise men in their private sentiments have ever treated hereditary right with contempt; yet it is one of those evils which when once established is not easily removed: many submit from fear, others from superstition, and the more powerful part shares with the king the plunder of the rest.

This is supposing the present race of kings in the world to have had an

honorable origin: whereas it is more than probable, that, could we take off the dark covering of antiquity and trace them to their first rise, we should find the first of them nothing better than the principal ruffian of some restless gang, whose savage manners of pre-eminence in subtilty obtained him the title of chief among plunderers; and who by increasing in power and extending his depredations, overawed the quiet and defenseless to purchase their safety by frequent contributions. Yet his electors could have no idea of giving hereditary right to his descendants, because such a perpetual exclusion of themselves was incompatible with the free and restrained principles they professed to live by. Wherefore, hereditary succession in the early ages of monarchy could not take place as a matter of claim, but as something casual or complemental; but as few or no records were extant in those days, the traditionary history stuff'd with fables, it was very easy, after the lapse of a few generations, to trump up some superstitious tale conveniently timed, Mahomet-like, to cram hereditary right down the throats of the vulgar. Perhaps the disorders which threatened, or seemed to threaten, on the decease of a leader and the choice of a new one (for elections among ruffians could not be very orderly) induced many at first to favour hereditary pretensions; by which means it happened, as it hath happened since, that what at first was submitted to as a convenience was afterwards claimed as a right.

England since the conquest hath known some few good monarchs, but groaned beneath a much larger number of bad ones: yet no man in his senses can say that their claim under William the Conqueror is a very honourable one. A French bastard landing with an armed Banditti and establishing himself king of England against the consent of the natives, is in plain terms a very paltry rascally original. It certainly hath no divinity in it. However it is needless to spend much time in exposing the folly of hereditary right; if there are any so weak as to believe it, let them promiscuously worship the Ass and the Lion, and welcome. I shall neither copy their humility, nor disturb their devotion.

Yet I should be glad to ask how they suppose kings came at first? The question admits but of three answers, viz. either by lot, by election, or by usurpation. If the first king was taken by lot, it establishes a precedent for the next, which excludes hereditary succession. Saul was by lot, yet the succession was not hereditary, neither does it appear from that transaction that there was any intention it ever should. If the first king of any country was by election, that likewise establishes a precedent for the next; for to say, that the right of all future generations is taken

away, by the act of the first electors, in their choice not only of a king but of a family of kings for ever, hath no parallel in or out of scripture but the doctrine of original sin, which supposes the free will of all men lost in Adam; and from such comparison, and it will admit of no other, hereditary succession can derive no glory. For as in Adam all sinned, and as in the first electors all men obeyed; as in the one all mankind were subjected to Satan, and in the other to sovereignty; as our innocence was lost in the first, and our authority in the last; and as both disable us from re-assuming some former state and privilege, it unanswerably follows that original sin and hereditary succession are parallels. Dishonourable rank! inglorious connection! yet the most subtle sophist cannot produce a juster simile.

As to usurpation, no man will be so hardy as to defend it; and that William the Conqueror was an usurper is a fact not to be contradicted. The plain truth is, that the antiquity of English monarchy will not bear looking into.

But it is not so much the absurdity as the evil of hereditary succession which concerns mankind. Did it ensure a race of good and wise men it would have the seal of divine authority, but as it opens a door to the *foolish*, the *wicked*, and the *improper*, it hath in it the nature of oppression. Men who look upon themselves born to reign, and others to obey, soon grow insolent. Selected from the rest of mankind, their minds are early poisoned by importance; and the world they act in differs so materially from the world at large, that they have but little opportunity of knowing its true interests, and when they succeed in the government are frequently the most ignorant and unfit of any throughout the dominions.

Another evil which attends hereditary succession is, that the throne is subject to be possessed by a minor at any age; all which time the regency acting under the cover of a king have every opportunity and inducement to betray their trust. The same national misfortune happens when a king worn out with age and infirmity enters the last stage of human weakness. In both these cases the public becomes a prey to every miscreant who can tamper successfully with the follies either of age or infancy.

The most plausible plea which hath ever been offered in favor of hereditary succession is, that it preserves a nation from civil wars; and were this true, it would be weighty; whereas it is the most bare-faced falsity ever imposed upon mankind. The whole history of England disowns the fact. Thirty kings and two minors have reigned in that distracted king-

dom since the conquest, in which time there has been (including the revolution) no less than eight civil wars and nineteen Rebellions. Wherefore instead of making for peace, it makes against it, and destroys the very foundation it seems to stand upon.

The contest for monarchy and succession, between the houses of York and Lancaster, laid England in a scene of blood for many years. Twelve pitched battles besides skirmishes and sieges were fought between Henry and Edward. Twice was Henry prisoner to Edward, who in his turn was prisoner to Henry. And so uncertain is the fate of war and the temper of a nation, when nothing but personal matters are the ground of a quarrel, that Henry was taken in triumph from a prison to a palace, and Edward obliged to fly from a palace to a foreign land; yet, as sudden transitions of temper are seldom lasting, Henry in his turn was driven from the throne, and Edward re-called to succeed him. The parliament always following the strongest side.

This contest began in the reign of Henry the Sixth, and was not entirely extinguished till Henry the Seventh, in whom the families were united. Including a period of 67 years, viz. from 1422 to 1489.

In short, monarchy and succession have laid (not this or that kingdom only) but the world in blood and ashes. 'Tis a form of government which the word of God bears testimony against, and blood will attend it.

If we enquire into the business of a King, we shall find that in some countries they may have none; and after sauntering away their lives without pleasure to themselves or advantage to the nation, withdraw from the scene, and leave their successors to tread the same idle round. In absolute monarchies the whole weight of business civil and military lies on the King; the children of Israel in their request for a king urged this plea, "that he may judge us, and go out before us and fight our battles." But in countries where he is neither a Judge nor a General, as in England, a man would be puzzled to know what is his business.

The nearer any government approaches to a Republic, the less business there is for a King. It is somewhat difficult to find a proper name for the government of England. Sir William Meredith calls it a Republic; but in its present state it is unworthy of the name, because the corrupt influence of the Crown, by having all the places in its disposal, hath so effectually swallowed up the power, and eaten out the virtue of the House of Commons (the Republican part in the constitution) that the government of England is nearly as monarchical as that of France or Spain. Men fall out with names without understanding them. For 'tis the Republican and not the Monarchical part of the Constitution of England

which Englishmen glory in, viz. the liberty of choosing an House of Commons from out of their own body—and it is easy to see that when Republican virtues fail, slavery ensues. Why is the constitution of England sickly, but because monarchy hath poisoned the Republic; the Crown hath engrossed the Commons.

In England a King hath little more to do than to make war and give away places; which, in plain terms, is to impoverish the nation and set it together by the ears. A pretty business indeed for a man to be allowed eight hundred thousand sterling a year for, and worshipped into the bargain! Of more worth is one honest man to society, and in the sight of God, than all the crowned ruffians that ever lived.

THOUGHTS ON THE PRESENT STATE OF AMERICAN AFFAIRS

IN the following pages I offer nothing more than simple facts, plain arguments, and common sense: and have no other preliminaries to settle with the reader, than that he will divest himself of prejudice and prepossession, and suffer his reason and his feelings to determine for themselves: that he will put on, or rather that he will not put off, the true character of a man, and generously enlarge his views beyond the present day.

Volumes have been written on the subject of the struggle between England and America. Men of all ranks have embarked in the controversy, from different motives, and with various designs; but all have been ineffectual, and the period of debate is closed. Arms as the last resource decide the contest; the appeal was the choice of the King, and the Continent has accepted the challenge.

It hath been reported of the late Mr. Pelham (who tho' an able minister was not without his faults) that on his being attacked in the House of Commons on the score that his measures were only of a temporary kind, replied, "*they will last my time.*" Should a thought so fatal and unmanly possess the Colonies in the present contest, the name of ancestors will be remembered by future generations with detestation.

The Sun never shined on a cause of greater worth. 'Tis not the affair of a City, a County, a Province, or a Kingdom; but of a Continent—of at least one-eighth part of the habitable Globe. 'Tis not the concern of a day, a year, or an age; posterity are virtually involved in the contest, and will be more or less affected even to the end of time, by the proceedings now. Now is the seed-time of Continental union, faith and honour. The least fracture now will be like a name engraved with the point of a pin on the

tender rind of a young oak; the wound would enlarge with the tree, and posterity read in it full grown characters.

By referring the matter from argument to arms, a new era for politics is struck—a new method of thinking hath arisen. All plans, proposals, &c. prior to the nineteenth of April, *i. e.* to the commencement of hostilities, are like the almanacks of the last year; which tho' proper then, are superceded and useless now. Whatever was advanced by the advocates on either side of the question then, terminated in one and the same point, *viz.* a union with Great Britain; the only difference between the parties was the method of effecting it; the one proposing force, the other friendship; but it hath so far happened that the first hath failed, and the second hath withdrawn her influence.

As much hath been said of the advantages of reconciliation, which, like an agreeable dream, hath passed away and left us as we were, it is but right that we should examine the contrary side of the argument, and enquire into some of the many material injuries which these Colonies sustain, and always will sustain, by being connected with and dependant on Great Britain. To examine that connection and dependance, on the principles of nature and common sense, to see what we have to trust to, if separated, and what we are to expect, if dependant.

I have heard it asserted by some, that as America has flourished under her former connection with Great Britain, the same connection is necessary towards her future happiness, and will always have the same effect. Nothing can be more fallacious than this kind of argument. We may as well assert that because a child has thrived upon milk, that it is never to have meat, or that the first twenty years of our lives is to become a precedent for the next twenty. But even this is admitting more than is true; for I answer roundly that America would have flourished as much, and probably much more, had no European power taken any notice of her. The commerce by which she hath enriched herself are the necessities of life, and will always have a market while eating is the custom of Europe.

But she has protected us, say some. That she hath engrossed us is true, and defended the Continent at our expense as well as her own, is admitted; and she would have defended Turkey from the same motive, *viz.* for the sake of trade and dominion.

Alas! we have been long led away by ancient prejudices and made large sacrifices to superstition. We have boasted the protection of Great Britain, without considering, that her motive was *interest* not *attach-*

ment; and that she did not protect us from *our enemies on our account*; but from *her enemies on her own account*, from those who had no quarrel with us on any *other account*, and who will always be our enemies on the *same account*. Let Britain waive her pretensions to the Continent, or the Continent throw off the dependance, and we should be at peace with France and Spain, were they at war with Britain. The miseries of Hanover last war ought to warn us against connections.

It hath lately been asserted in parliament, that the Colonies have no relation to each other but through the Parent Country, *i. e.* that Pennsylvania and the Jerseys and so on for the rest, are sister Colonies by the way of England; this is certainly a very roundabout way of proving relationship, but it is the nearest and only true way of proving enmity (or enemyship, if I may so call it.) France and Spain never were, nor perhaps ever will be, our enemies as *Americans*, but as our being the *subjects of Great Britain*.

But Britain is the parent country, say some. Then the more shame upon her conduct. Even brutes do not devour their young, nor savages make war upon their families. Wherefore, the assertion, if true, turns to her reproach; but it happens not to be true, or only partly so, and the phrase *parent or mother country* hath been jesuitically adopted by the King and his parasites, with a low papistical design of gaining an unfair bias on the credulous weakness of our minds. Europe, and not England, is the parent country of America. This new World hath been the asylum for the persecuted lovers of civil and religious liberty from *every part* of Europe. Hither have they fled, not from the tender embraces of the mother, but from the cruelty of the monster; and it is so far true of England, that the same tyranny which drove the first emigrants from home, pursues their descendants still.

In this extensive quarter of the globe, we forget the narrow limits of three hundred and sixty miles (the extent of England) and carry our friendship on a larger scale; we claim brotherhood with every European Christian, and triumph in the generosity of the sentiment.

It is pleasant to observe by what regular gradations we surmount the force of local prejudices, as we enlarge our acquaintance with the World. A man born in any town in England divided into parishes, will naturally associate most with his fellow parishioners (because their interests in many cases will be common) and distinguish him by the name of *neighbour*; if he meet him but a few miles from home, he drops the narrow idea of a street, and salutes him by the name of *townsman*; if he travel out of the county and meet him in any other, he forgets the minor

divisions of street and town, and calls him *countryman*, i. e. *countyman*; but if in their foreign excursions they should associate in France, or any other part of *Europe*, their local remembrance would be enlarged into that of *Englishmen*. And by a just parity of reasoning, all Europeans meeting in America, or any other quarter of the globe, are *countrymen*; for England, Holland, Germany, or Sweden, when compared with the whole, stand in the same places on the larger scale, which the divisions of street, town, and county do on the smaller ones; Distinctions too limited for Continental minds. Not one third of the inhabitants, even of this province, [Pennsylvania], are of English descent. Wherefore, I reprobate the phrase of Parent or Mother Country applied to England only, as being false, selfish, narrow and ungenerous.

But, admitting that we were all of English descent, what does it amount to? Nothing. Britain, being now an open enemy, extinguishes every other name and title: and to say that reconciliation is our duty, is truly farcical. The first king of England, of the present line (William the Conqueror) was a Frenchman, and half the peers of England are descendants from the same country; wherefore, by the same method of reasoning, England ought to be governed by France.

Much hath been said of the united strength of Britain and the Colonies, that in conjunction they might bid defiance to the world. But this is mere presumption; the fate of war is uncertain, neither do the expressions mean anything; for this continent would never suffer itself to be drained of inhabitants, to support the British arms in either Asia, Africa, or Europe.

Besides, what have we to do with setting the world at defiance? Our plan is commerce, and that, well attended to, will secure us the peace and friendship of all Europe; because it is the interest of all Europe to have America a free port. Her trade will always be a protection, and her barrenness of gold and silver secure her from invaders.

I challenge the warmest advocate for reconciliation to show a single advantage that this continent can reap by being connected with Great Britain. I repeat the challenge; not a single advantage is derived. Our corn will fetch its price in any market in Europe, and our imported goods must be paid for buy them where we will.

But the injuries and disadvantages which we sustain by that connection, are without number; and our duty to mankind at large, as well as to ourselves, instruct us to renounce the alliance: because, any submission to, or dependance on, Great Britain, tends directly to involve this Continent in European wars and quarrels, and set us at variance with

nations who would otherwise seek our friendship, and against whom we have neither anger nor complaint. As Europe is our market for trade, we ought to form no partial connection with any part of it. It is the true interest of America to steer clear of European contentions, which she never can do, while, by her dependance on Britain, she is made the make-weight in the scale of British politics.

Europe is too thickly planted with Kingdoms to be long at peace, and whenever a war breaks out between England and any foreign power, the trade of America goes to ruin, *because of her connection with Britain*. The next war may not turn out like the last, and should it not, the advocates for reconciliation now will be wishing for separation then, because neutrality in that case would be a safer convoy than a man of war. Every thing that is right or reasonable pleads for separation. The blood of the slain, the weeping voice of nature cries, 'TIS TIME TO PART. Even the distance at which the Almighty hath placed England and America is a strong and natural proof that the authority of the one over the other, was never the design of Heaven. The time likewise at which the Continent was discovered, adds weight to the argument, and the manner in which it was peopled, encreases the force of it. The Reformation was preceded by the discovery of America: As if the Almighty graciously meant to open a sanctuary to the persecuted in future years, when home should afford neither friendship nor safety.

The authority of Great Britain over this continent, is a form of government, which sooner or later must have an end: And a serious mind can draw no true pleasure by looking forward, under the painful and positive conviction that what he calls "the present constitution" is merely temporary. As parents, we can have no joy, knowing that this government is not sufficiently lasting to ensure any thing which we may bequeath to posterity: And by a plain method of argument, as we are running the next generation into debt, we ought to do the work of it, otherwise we use them meanly and pitifully. In order to discover the line of our duty rightly, we should take our children in our hand, and fix our station a few years farther into life; that eminence will present a prospect which a few present fears and prejudices conceal from our sight.

Though I would carefully avoid giving unnecessary offence, yet I am inclined to believe, that all those who espouse the doctrine of reconciliation, may be included within the following descriptions.

Interested men, who are not to be trusted, weak men who *cannot* see, prejudiced men who will not see, and a certain set of moderate men who think better of the European world than it deserves; and this last class,

by an ill-judged deliberation, will be the cause of more calamities to this Continent than all the other three.

It is the good fortune of many to live distant from the scene of present sorrow; the evil is not sufficiently brought to their doors to make them feel the precariousness with which all American property is possessed. But let our imaginations transport us a few moments to Boston; that seat of wretchedness will teach us wisdom, and instruct us for ever to renounce a power in whom we can have no trust. The inhabitants of that unfortunate city who but a few months ago were in ease and affluence, have now no other alternative than to stay and starve, or turn out to beg. Endangered by the fire of their friends if they continue within the city and plundered by the soldiery if they leave it, in their present situation they are prisoners without the hope of redemption, and in a general attack for their relief they would be exposed to the fury of both armies.

Men of passive tempers look somewhat lightly over the offences of Great Britain, and, still hoping for the best, are apt to call out, *Come, come, we shall be friends again for all this*. But examine the passions and feelings of mankind: bring the doctrine of reconciliation to the touchstone of nature, and then tell me whether you can hereafter love, honour, and faithfully serve the power that hath carried fire and sword into your land? If you cannot do all these, then are you only deceiving yourselves, and by your delay bringing ruin upon posterity. Your future connection with Britain, whom you can neither love nor honour, will be forced and unnatural, and being formed only on the plan of present convenience, will in a little time fall into a relapse more wretched than the first. But if you say, you can still pass the violations over, then I ask, hath your house been burnt? Hath your property been destroyed before your face? Are your wife and children destitute of a bed to lie on, or bread to live on? Have you lost a parent or a child by their hands, and yourself the ruined and wretched survivor? If you have not, then are you not a judge of those who have. But if you have, and can still shake hands with the murderers, then are you unworthy the name of husband, father, friend or lover, and whatever may be your rank or title in life, you have the heart of a coward, and the spirit of a sycophant.

This is not inflaming or exaggerating matters, but trying them by those feelings and affections which nature justifies, and without which we should be incapable of discharging the social duties of life, or enjoying the felicities of it. I mean not to exhibit horror for the purpose of provoking revenge, but to awaken us from fatal and unmanly slumbers, that we may pursue determinately some fixed object. 'Tis not in the

power of Britain or of Europe to conquer America, if she doth not conquer herself by delay and timidity. The present winter is worth an age if rightly employed, but if lost or neglected the whole Continent will partake of the misfortune; and there is no punishment which that man doth not deserve, be he who, or what, or where he will, that may be the means of sacrificing a season so precious and useful.

'Tis repugnant to reason, to the universal order of things, to all examples from former ages, to suppose that this Continent can long remain subject to any external power. The most sanguine in Britain doth not think so. The utmost stretch of human wisdom cannot, at this time, compass a plan, short of separation, which can promise the continent even a year's security. Reconciliation is *now* a fallacious dream. Nature hath deserted the connection, and art cannot supply her place. For, as Milton wisely expresses, "never can true reconcilment grow where wounds of deadly hate have pierced so deep."

Every quiet method for peace hath been ineffectual. Our prayers have been rejected with disdain; and hath tended to convince us that nothing flatters vanity or confirms obstinacy in Kings more than repeated petitioning—and nothing hath contributed more than that very measure to make the Kings of Europe absolute. Witness Denmark and Sweden. Wherefore, since nothing but blows will do, for God's sake let us come to a final separation, and not leave the next generation to be cutting throats under the violated unmeaning names of parent and child.

To say they will never attempt it again is idle and visionary; we thought so at the repeal of the stamp act, yet a year or two undeceived us; as well may we suppose that nations which have been once defeated will never renew the quarrel.

As to government matters, 'tis not in the power of Britain to do this continent justice: the business of it will soon be too weighty and intricate to be managed with any tolerable degree of convenience, by a power so distant from us, and so very ignorant of us; for if they cannot conquer us, they cannot govern us. To be always running three or four thousand miles with a tale or petition, waiting for four or five months for an answer, which, when obtained, requires five or six more to explain it in, will in a few years be looked upon as folly and childishness. There was a time when it was proper, and there is a proper time for it to cease.

Small islands not capable of protecting themselves are the proper objects for government to take under their care; but there is something absurd, in supposing a Continent to be perpetually governed by an island. In no instance hath nature made the satellite larger than its primary

planet; and as England and America, with respect to each other, reverse the common order of nature, it is evident that they belong to different systems. England to Europe: America to itself.

I am not induced by motives of pride, party, or resentment to espouse the doctrine of separation and independence; I am clearly, positively, and conscientiously persuaded that it is the true interest of this Continent to be so; that every thing short of *that* is mere patchwork, that it can afford no lasting felicity,—that it is leaving the sword to our children, and shrinking back at a time when a little more, a little further, would have rendered this Continent the glory of the earth.

As Britain hath not manifested the least inclination towards a compromise, we may be assured that no terms can be obtained worthy the acceptance of the Continent, or any ways equal to the expense of blood and treasure we have been already put to.

The object contended for, ought always to bear some just proportion to the expense. The removal of North, or the whole detestable junto, is a matter unworthy the millions we have expended. A temporary stoppage of trade was an inconvenience, which would have sufficiently balanced the repeal of all the acts complained of, had such repeals been obtained; but if the whole Continent must take up arms, if every man must be a soldier, 'tis scarcely worth our while to fight against a contemptible ministry only. Dearly, dearly do we pay for the repeal of the acts, if that is all we fight for; for, in a just estimation 'tis as great a folly to pay a Bunker-hill price for law as for land. As I have always considered the independancy of this Continent, as an event which sooner or later must arrive, so from the late rapid progress of the Continent to maturity, the event cannot be far off. Wherefore, on the breaking out of hostilities, it was not worth the while to have disputed a matter which time would have finally redressed, unless we meant to be in earnest: otherwise it is like wasting an estate on a suit at law, to regulate the tresspasses of a tenant whose lease is just expiring. No man was a warmer wisher for a reconciliation than myself, before the fatal nineteenth of April, 1775, but the moment the event of that day was made known, I rejected the hardened, sullen-tempered Pharaoh of England for ever; and disdain the wretch, that with the pretended title of FATHER OF HIS PEOPLE can unfeelingly hear of their slaughter, and composedly sleep with their blood upon his soul.

But admitting that matters were now made up, what would be the event? I answer, the ruin of the Continent. And that for several reasons.

First. The powers of governing still remaining in the hands of the King,

he will have a negative over the whole legislation of this Continent. And as he hath shown himself such an inveterate enemy to liberty, and discovered such a thirst for arbitrary powers, is he, or is he not, a proper person to say to these colonies, *You shall make no laws but what I please!* And is there any inhabitant of America so ignorant as not to know, that according to what is called the *present constitution*, this Continent can make no laws but what the king gives leave to; and is there any man so unwise as not to see, that (considering what has happened) he will suffer no law to be made here but such as suits *his* purpose? We may be as effectually enslaved by the want of laws in America, as by submitting to laws made for us in England. After matters are made up (as it is called) can there be any doubt, but the whole power of the crown will be exerted to keep this continent as low and humble as possible? Instead of going forward we shall go backward, or be perpetually quarrelling, or ridiculously petitioning. We are already greater than the King wishes us to be, and will he not hereafter endeavor to make us less? To bring the matter to one point, Is the power who is jealous of our prosperity, a proper power to govern us? Whoever says *No*, to this question, is an Independent for independency means no more than this, whether we shall make our own laws, or, whether the King, the greatest enemy this continent hath, or can have, shall tell us *there shall be no laws but such as I like*.

But the King, you will say, has a negative in England; the people there can make no laws without his consent. In point of right and good order, it is something very ridiculous that a youth of twenty-one (which hath often happened) shall say to several millions of people older and wiser than himself, "I forbid this or that act of yours to be law." But in this place I decline this sort of reply, though I will never cease to expose the absurdity of it, and only answer that England being the King's residence, and America not so, makes quite another case. The King's negative here is ten times more dangerous and fatal than it can be in England; for there he will scarcely refuse his consent to a bill for putting England into as strong a state of defense as possible, and in America he would never suffer such a bill to be passed.

America is only a secondary object in the system of British politics. England consults the good of this country no further than it answers her own purpose. Wherefore, her own interest leads her to suppress the growth of ours in every case which doth not promote her advantage, or in the least interferes with it. A pretty state we should soon be in under

such a second hand government, considering what has happened. Men do not change from enemies to friends by the alteration of a name: And in order to show that reconciliation now is a dangerous doctrine, I affirm, *that it would be policy in the King at this time to repeal the acts, for the sake of reinstating himself in the government of the provinces;* In order that HE MAY ACCOMPLISH BY CRAFT AND SUBTLETY, IN THE LONG RUN, WHAT HE CANNOT DO BY FORCE AND VIOLENCE IN THE SHORT RUN. Reconciliation and ruin are nearly related.

Secondly. That as even the best terms which we can expect to obtain can amount to no more than a temporary expedient, or a kind of government by guardianship, which can last no longer than till the Colonies come of age, so the general face and state of things in the interim will be unsettled and unpromising. Emigrants of property will not choose to come to a country whose form of government hangs but by a thread, and who is every day tottering on the brink of commotion and disturbance; and numbers of the present inhabitants would lay hold of the interval to dispose of their effects, and quit the Continent.

But the most powerful of all arguments is, that nothing but independence, *i. e.* a Continental form of government, can keep the peace of the Continent and preserve it inviolate from civil wars. I dread the event of a reconciliation with Britain now, as it is more than probable that it will be followed by a revolt some where or other, the consequences of which may be far more fatal than all the malice of Britain.

Thousands are already ruined by British barbarity; (thousands more will probably suffer the same fate.) Those men have other feelings than us who have nothing suffered. All they now possess is liberty; what they before enjoyed is sacrificed to its service, and having nothing more to lose they disdain submission. Besides, the general temper of the Colonies, towards a British government will be like that of a youth who is nearly out of his time; they will care very little about her: And a government which cannot preserve the peace is no government at all, and in that case we pay our money for nothing; and pray what is it that Britain can do, whose power will be wholly on paper, should a civil tumult break out the very day after reconciliation? I have heard men say, many of whom I believe spoke without thinking, that they dreaded an independance, fearing that it would produce civil wars: It is but seldom that our first thoughts are truly correct, and that is the case here; for there is ten times more to dread from a patched up connection than from independance. I make the sufferer's case my own, and I protest, that were I driven

from house and home, my property destroyed, and my circumstances ruined, that as a man, sensible of injuries, I could never relish the doctrine of reconciliation, or consider myself bound thereby.

The Colonies have manifested such a spirit of good order and obedience to Continental government, as is sufficient to make every reasonable person easy and happy on that head. No man can assign the least pretence for his fears, on any other grounds, than such as are truly childish and ridiculous, viz., that one colony will be striving for superiority over another.

Where there are no distinctions there can be no superiority; perfect equality affords no temptation. The Republics of Europe are all (and we may say always) in peace. Holland and Switzerland are without wars, foreign or domestic: Monarchical governments, it is true are never long at rest: the crown itself is a temptation to enterprising ruffians at home; and that degree of pride and insolence ever attendant on regal authority, swells into a rupture with foreign powers in instances where a republican government, by being formed on more natural principles, would negotiate the mistake.

If there is any true cause of fear respecting independance, it is because no plan is yet laid down. Men do not see their way out. Wherefore, as an opening into that business I offer the following hints; at the same time modestly affirming, that I have no other opinion of them myself, than that they may be the means of giving rise to something better. Could the straggling thoughts of individuals be collected, they would frequently form materials for wise and able men to improve into useful matter.

Let the assemblies be annual, with a president only. The representation more equal, their business wholly domestic, and subject to the authority of a Continental Congress.

Let each Colony be divided into six, eight, or ten, convenient districts, each district to send a proper number of Delegates to Congress, so that each Colony send at least thirty. The whole number in Congress will be at least 390. Each congress to sit and to choose a President by the following method. When the Delegates are met, let a Colony be taken from the whole thirteen Colonies by lot, after which let the Congress choose (by ballot) a president from out of the Delegates of that Province. In the next Congress, let a Colony be taken by lot from twelve only, omitting that Colony from which the president was taken in the former Congress, and so proceeding on till the whole thirteen shall have had their proper rotation. And in order that nothing may pass into a law but what is satisfactorily just, not less than three fifths of the Congress to be called

a majority. He that will promote discord, under a government so equally formed as this, would have joined Lucifer in his revolt.

But as there is a peculiar delicacy from whom, or in what manner, this business must first arise, and as it seems most agreeable and consistent that it should come from some intermediate body between the governed and the governors, that is, between the Congress and the People, let a Continental Conference be held in the following manner, and for the following purpose,

A Committee of twenty-six members of congress, *viz.* Two for each Colony. Two Members from each House of Assembly, or Provincial Convention; and five Representatives of the people at large, to be chosen in the capital city or town of each Province, for, in behalf of the whole Province, by as many qualified voters as shall think proper to attend from all parts of the Province for that purpose; or, if more convenient, the Representatives may be chosen in two or three of the most populous parts thereof. In this conference, thus assembled, will be united the two grand principles of business, *knowledge* and *power*. The Members of Congress, Assemblies, or Conventions, by having had experience in national concerns, will be able and useful counsellors, and the whole, being impowered by the people, will have a truly legal authority.

The conferring members being met, let their business be to frame a Continental Charter, or Charter of the United Colonies; (answering what is called the Magna Charta of England) fixing the number and manner of choosing Members of Congress, Members of Assembly, with their date of sitting; and drawing the line of business and jurisdiction between them: Always remembering, that our strength is Continental, not provincial. Securing freedom and property to all men, and above all things, the free exercise of religion, according to the dictates of conscience; with such other matter as it is necessary for a charter to contain. Immediately after which, the said conference to dissolve, and the bodies which shall be chosen conformable to the said charter, to be the Legislators and Governors of this Continent for the time being: Whose peace and happiness, may God preserve. AMEN.

Should any body of men be hereafter delegated for this or some similar purpose, I offer them the following extracts from that wise observer on Governments, Dragonetti. "The science," says he, "of the Politician consists in fixing the true point of happiness and freedom. Those men would deserve the gratitude of ages, who should discover a mode of government that contained the greatest sum of individual happiness, with the least national expense." (Dragonetti on "Virtues and Reward.")

But where, say some, is the King of America? I'll tell you, friend, he reigns above, and doth not make havoc of mankind like the Royal Brute of Great Britain. Yet that we may not appear to be defective even in earthly honours, let a day be solemnly set apart for proclaiming the Charter; let it be brought forth placed on the Divine Law, the Word of God; let a crown be placed thereon, by which the world may know, that so far as we approve of monarchy, that in America the law is king. For as in absolute governments the King is law, so in free countries the law ought to be king; and there ought to be no other. But lest any ill use should afterwards arise, let the Crown at the conclusion of the ceremony be demolished, and scattered among the people whose right it is.

A government of our own is our natural right: and when a man seriously reflects on the precariousness of human affairs, he will become convinced, that it is infinitely wiser and safer, to form a constitution of our own in a cool deliberate manner, while we have it in our power, than to trust such an interesting event to time and chance. If we omit it now, some Massanello may hereafter arise, who, laying hold of popular disquietudes, may collect together the desperate and the discontented, and by assuming to themselves the powers of government, finally sweep away the liberties of the Continent like a deluge. Should the government of America return again into the hands of Britain, the tottering situation of things will be a temptation for some desperate adventurer to try his fortune; and in such a case, what relief can Britain give? Ere she could hear the news, the fatal business might be done; and ourselves suffering like the wretched Britons under the oppression of the Conqueror. Ye that oppose independance now, ye know not what ye do: ye are opening a door to eternal tyranny, by keeping vacant the seat of government. There are thousands and tens of thousands, who would think it glorious to expel from the Continent, that barbarous and hellish power, which hath stirred up the Indians and the Negroes to destroy us; the cruelty hath a double guilt, it is dealing brutally by us, and treacherously by them.

To talk of friendship with those in whom our reason forbids us to have faith, and our affections wounded thro' a thousand pores instruct us to detest, is madness and folly. Every day wears out the little remains of kindred between us and them; and can there be any reason to hope, that as the relationship expires, the affection will encrease, or that we shall agree better when we have ten times more and greater concerns to quarrel over than ever?

Ye that tell us of harmony and reconciliation, can ye restore to us the time that is past? Can ye give to prostitution its former innocence?

neither can ye reconcile Britain and America. The last cord now is broken, the people of England are presenting addresses against us. There are injuries which nature cannot forgive; she would cease to be nature if she did. As well can the lover forgive the ravisher of his mistress, as the Continent forgive the murders of Britain. The Almighty hath implanted in us these unextinguishable feelings for good and wise purposes. They are the Guardians of his Image in our hearts. They distinguish us from the herd of common animals. The social compact would dissolve, and justice be extirpated from the earth, or have only a casual existence were we callous to the touches of affection. The robber and the murderer would often escape unpunished, did not the injuries which our tempers sustain, provoke us into justice.

O! ye that love mankind! Ye that dare oppose not only the tyranny but the tyrant, stand forth! Every spot of the old world is overrun with oppression. Freedom hath been hunted round the Globe. Asia and Africa have long expelled her. Europe regards her like a stranger, and England hath given her warning to depart. O! receive the fugitive, and prepare in time an asylum for mankind.

OF THE PRESENT ABILITY OF AMERICA: WITH SOME
MISCELLANEOUS REFLECTIONS

I HAVE never met with a man, either in England or America, who hath not confessed his opinion, that a separation between the countries would take place one time or other: And there is no instance in which we have shown less judgment, than in endeavoring to describe, what we call, the ripeness or fitness of the continent for independence.

As all men allow the measure, and vary only in their opinion of the time, let us, in order to remove mistakes, take a general survey of things, and endeavor if possible to find out the *very* time. But I need not go far, the inquiry ceases at once, for the *time hath found us*. The general concurrence, the glorious union of all things, proves the fact.

'Tis not in numbers but in unity that our great strength lies: yet our present numbers are sufficient to repel the force of all the world. The Continent hath at this time the largest body of armed and disciplined men of any power under Heaven: and is just arrived at that pitch of strength, in which no single colony is able to support itself, and the whole, when united, is able to do any thing. Our land force is more than sufficient, and as to Naval affairs, we cannot be insensible that Britain would never suffer an American man of war to be built, while the Con-

tinient remained in her hands. Wherefore, we should be no forwarder an hundred years hence in that branch than we are now; but the truth is, we should be less so, because the timber of the Country is every day diminishing, and that which will remain at last, will be far off or difficult to procure.

Were the Continent crowded with inhabitants, her sufferings under the present circumstances would be intolerable. The more seaport-towns we had, the more should we have both to defend and to lose. Our present numbers are so happily proportioned to our wants, that no man need be idle. The diminution of trade affords an army, and the necessities of an army create a new trade.

Debts we have none: and whatever we may contract on this account will serve as a glorious memento of our virtue. Can we but leave posterity with a settled form of government, an independent constitution of its own, the purchase at any price will be cheap. But to expend millions for the sake of getting a few vile acts repealed, and routing the present ministry only, is unworthy the charge, and is using posterity with the utmost cruelty; because it is leaving them the great work to do, and a debt upon their backs from which they derive no advantage. Such a thought's unworthy a man of honour, and is the true characteristic of a narrow heart and a piddling politician.

The debt we may contract doth not deserve our regard if the work be but accomplished. No nation ought to be without a debt. A national debt is a national bond; and when it bears no interest, is in no case a grievance. Britain is oppressed with a debt of upwards of one hundred and forty millions sterling, for which she pays upwards of four millions interest. And as a compensation for her debt, she has a large navy; America is without a debt, and without a navy; yet for the twentieth part of the English national debt, could have a navy as large again. The navy of England is not worth at this time more than three millions and a half sterling.

The first and second editions of this pamphlet were published without the following calculations, which are now given as a proof that the above estimation of the navy is a just one. See Entic's "Naval History," Intro., p. 56.

The charge of building a ship of each rate, and furnishing her with masts, yards, sails, and rigging, together with a proportion of eight months boatswain's and carpenter's sea-stores, as calculated by Mr. Burchett, Secretary to the navy.

For a ship of 100 guns,	35,553 £
90 "	29,886
80 "	23,638
70 "	17,785
60 "	14,197
50 "	10,606
40 "	7,558
30 "	5,846
20 "	3,710

And hence it is easy to sum up the value, or cost, rather, of the whole British navy, which, in the year 1757, when it was at its greatest glory, consisted of the following ships and guns.

<i>Ships</i>	<i>Guns</i>	<i>Cost of One</i>	<i>Cost of All</i>
6	100	55,553 £	213,318 £
12	90	29,886	358,632
12	80	23,638	283,656
43	70	17,785	764,755
35	60	14,197	496,895
40	50	10,605	424,240
45	40	7,558	340,110
58	20	3,710	215,180
85 sloops, bombs, and fireships, one with another at		2,000	170,000
Cost,			3,266,786 £
Remains for guns,			233,214
Total,			3,500,000 £

No country on the globe is so happily situated, or so internally capable of raising a fleet as America. Tar, timber, iron, and cordage are her natural produce. We need go abroad for nothing. Whereas the Dutch, who make large profits by hiring out their ships of war to the Spaniards and Portuguese, are obliged to import most of the materials they use. We ought to view the building a fleet as an article of commerce, it being the natural manufactory of this country. 'Tis the best money we can lay out. A navy when finished is worth more than it cost: And is that nice point in national policy, in which commerce and protection are united. Let us build; if we want them not, we can sell; and by that means replace our paper currency with ready gold and silver.

In point of manning a fleet, people in general run into great errors; it is not necessary that one-fourth part should be sailors. The Terrible priva-

teer, captain Death, stood the hottest engagement of any ship last war, yet had not twenty sailors on board, though her complement of men was upwards of two hundred. A few able and social sailors will soon instruct a sufficient number of active landmen in the common work of a ship. Wherefore we never can be more capable of beginning on maritime matters than now, while our timber is standing, our fisheries blocked up, and our sailors and shipwrights out of employ. Men of war, of seventy and eighty guns, were built forty years ago in New England, and why not the same now? Ship building is America's greatest pride, and in which she will, in time, excel the whole world. The great empires of the east are mainly inland, and consequently excluded from the possibility of rivalling her. Africa is in a state of barbarism; and no power in Europe hath either such an extent of coast, or such an internal supply of materials. Where nature hath given the one, she hath withheld the other; to America only hath she been liberal to both. The vast empire of Russia is almost shut out from the sea; wherefore her boundless forests, her tar, iron and cordage are only articles of commerce.

In point of safety, ought we to be without a fleet? We are not the little people now which we were sixty years ago; at that time we might have trusted our property in the streets, or fields rather, and slept securely without locks or bolts to our doors and windows. The case is now altered, and our methods of defence ought to improve with our increase of property. A common pirate, twelve months ago, might have come up the Delaware, and laid the city of Philadelphia under contribution for what sum he pleased; and the same might have happened to other places. Nay, any daring fellow, in a brig of fourteen or sixteen guns, might have robbed the whole Continent, and carried off half a million of money. These are circumstances which demand our attention, and point out the necessity of naval protection.

Some perhaps will say, that after we have made it up with Britain, she will protect us. Can they be so unwise as to mean that she will keep a navy in our harbors for that purpose? Common sense will tell us that the power which hath endeavoured to subdue us, is of all others the most improper to defend us. Conquest may be effected under the pretence of friendship; and ourselves, after a long and brave resistance, be at last cheated into slavery. And if her ships are not to be admitted into our harbours, I would ask, how is she going to protect us? A navy three or four thousand miles off can be of little use, and on sudden emergencies, none at all. Wherefore if we must hereafter protect ourselves, why not do it for ourselves? Why do it for another?

The English list of ships of war is long and formidable, but not a tenth part of them are at any time fit for service, numbers of them are not in being; yet their names are pompously continued in the list; if only a plank be left of the ship; and not a fifth part of such as are fit for service can be spared on any one station at one time. The East and West Indies, Mediterranean, Africa, and other parts, over which Britain extends her claim, make large demands upon her navy. From a mixture of prejudice and inattention we have contracted a false notion respecting the navy of England, and have talked as if we should have the whole of it to encounter at once, and for that reason supposed that we must have one as large; which not being instantly practicable, has been made use of by a set of disguised Tories to discourage our beginning thereon. Nothing can be further from truth than this; for if America had only a twentieth part of the naval force of Britain, she would be by far an over-match for her; because, as we neither have, nor claim any foreign dominion, our whole force would be employed on our own coast, where we should, in the long run, have two to one the advantage of those who had three or four thousand miles to sail over before they could attack us, and the same distance to return in order to refit and recruit. And although Britain, by her fleet, hath a check over our trade to Europe, we have as large a one over her trade to the West Indies, which, by laying in the neighborhood of the Continent, lies entirely at its mercy.

Some method might be fallen on to keep up a naval force in time of peace, if we should judge it necessary to support a constant navy. If premiums were to be given to merchants to build and employ in their service ships mounted with twenty, thirty, forty, or fifty guns (the premiums to be in proportion to the loss of bulk to the merchant), fifty or sixty of those ships, with a few guardships on constant duty, would keep up a sufficient navy, and that without burdening ourselves with the evil so loudly complained of in England, of suffering their fleet in time of peace to lie rotting in the docks. To unite the sinews of commerce and defence is sound policy; for when our strength and our riches play into each other's hand, we need fear no external enemy.

In almost every article of defence we abound. Hemp flourishes even to rankness, so that we need not want cordage. Our iron is superior to that of other countries. Our small arms equal to any in the world. Cannon we can cast at pleasure. Saltpetre and gunpowder we are every day producing. Our knowledge is hourly improving. Resolution is our inherent character, and courage hath never yet forsaken us. Wherefore, what is it that we want? Why is it that we hesitate? From Britain we can expect nothing

but ruin. If she is once admitted to the government of America again, this Continent will not be worth living in. Jealousies will be always arising; insurrections will be constantly happening; and who will go forth to quell them? Who will venture his life to reduce his own countrymen to a foreign obedience? The difference between Pennsylvania and Connecticut, respecting some unlocated lands, shows the insignificance of a British government, and fully proves that nothing but Continental authority can regulate Continental matters.

Another reason why the present time is preferable to all others is, that the fewer our numbers are, the more land there is yet unoccupied, which, instead of being lavished by the king on his worthless dependents, may be hereafter applied, not only to the discharge of the present debt, but to the constant support of government. No nation under Heaven hath such an advantage as this.

The infant state of the Colonies, as it is called, so far from being against, is an argument in favour of independence. We are sufficiently numerous, and were we more so we might be less united. 'Tis a matter worthy of observation that the more a country is peopled, the smaller their armies are. In military numbers, the ancients far exceeded the moderns; and the reason is evident, for trade being the consequence of population, men became too much absorbed thereby to attend to anything else. Commerce diminishes the spirit both of patriotism and military defence. And history sufficiently informs us that the bravest achievements were always accomplished in the non-age of a nation. With the increase of commerce England hath lost its spirit. The city of London, notwithstanding its numbers, submits to continued insults with the patience of a coward. The more men have to lose, the less willing are they to venture. The rich are in general slaves to fear, and submit to courtly power with the trembling duplicity of a spaniel.

Youth is the seed-time of good habits as well in nations as in individuals. It might be difficult, if not impossible, to form the Continent into one government half a century hence. The vast variety of interests, occasioned by an increase of trade and population, would create confusion. Colony would be against colony. Each being able would scorn each other's assistance; and while the proud and foolish gloried in their little distinctions the wise would lament that the union had not been formed before. Wherefore the present time is the true time for establishing it. The intimacy which is contracted in infancy, and the friendship which is formed in misfortune, are of all others the most lasting and unalterable. Our pres-

ent union is marked with both these characters; we are young, and we have been distressed; but our concord hath withstood our troubles, and fixes a memorable era for posterity to glory in.

The present time, likewise, is that peculiar time which never happens to a nation but once, viz., the time of forming itself into a government. Most nations have let slip the opportunity, and by that means have been compelled to receive laws from their conquerors, instead of making laws for themselves. First, they had a king, and then a form of government; whereas the articles or charter of government should be formed first, and men delegated to execute them afterwards; but from the errors of other nations let us learn wisdom, and lay hold of the present opportunity—to begin government at the right end.

When William the Conqueror subdued England, he gave them law at the point of the sword; and, until we consent that the seat of government in America be legally and authoritatively occupied, we shall be in danger of having it filled by some fortunate ruffian, who may treat us in the same manner, and then, where will be our freedom? where our property?

As to religion, I hold it to be the indispensable duty of government to protect all conscientious professors thereof, and I know of no other business which government hath to do therewith. Let a man throw aside that narrowness of soul, that selfishness of principle, which the niggards of all professions are so unwilling to part with, and he will be at once delivered of his fears on that head. Suspicion is the companion of mean souls, and the bane of all good society. For myself, I fully and conscientiously believe that it is the will of the Almighty that there should be a diversity of religious opinions among us. It affords a larger field for our Christian kindness; were we all of one way of thinking, our religious dispositions would want matter for probation; and on this liberal principle I look on the various denominations among us to be like children of the same family, differing only in what is called their Christian names.

In page [97] I threw out a few thoughts on the propriety of a Continental Charter (for I only presume to offer hints, not plans) and in this place I take the liberty of re-mentioning the subject, by observing that a charter is to be understood as a bond of solemn obligation, which the whole enters into, to support the right of every separate part, whether of religion, professional freedom, or property. A firm bargain and a right reckoning make long friends.

I have heretofore likewise mentioned the necessity of a large and equal representation; and there is no political matter which more deserves our

attention. A small number of electors, or a small number of representatives, are equally dangerous. But if the number of the representatives be not only small, but unequal, the danger is increased. As an instance of this, I mention the following: when the petition of the associators was before the House of Assembly of Pennsylvania, twenty-eight members only were present; all the Bucks county members, being eight, voted against it, and had seven of the Chester members done the same, this whole province had been governed by two counties only; and this danger it is always exposed to. The unwarrantable stretch likewise, which that house made in their last sitting, to gain an undue authority over the delegates of that province, ought to warn the people at large how they trust power out of their own hands. A set of instructions for their delegates were put together, which in point of sense and business would have dishonoured a school-boy, and after being approved by a few, a very few, without doors, were carried into the house, and there passed *in behalf of the whole colony*; whereas, did the whole colony know with what ill will that house had entered on some necessary public measures, they would not hesitate a moment to think them unworthy of such a trust.

Immediate necessity makes many things convenient, which if continued would grow into oppressions. Expedience and right are different things. When the calamities of America required a consultation, there was no method so ready, or at that time so proper, as to appoint persons from the several houses of assembly for that purpose; and the wisdom with which they have proceeded hath preserved this Continent from ruin. But as it is more than probable that we shall never be without a CONGRESS, every well wisher to good order must own that the mode for choosing members of that body deserves consideration. And I put it as a question to those who make a study of mankind, whether representation and election is not too great a power for one and the same body of men to possess? When we are planning for posterity, we ought to remember that virtue is not hereditary.

It is from our enemies that we often gain excellent maxims, and are frequently surprised into reason by their mistakes. Mr. Cornwall (one of the Lords of the Treasury) treated the petition of the New York Assembly with contempt, because *that* house, he said, consisted but of twenty-six members, which trifling number, he argued, could not with decency be put for the whole. We thank him for his involuntary honesty.

To CONCLUDE, however strange it may appear to some, or however unwilling they may be to think so, matters not, but many strong and striking reasons may be given to show that nothing can settle our affairs

so expeditiously as an open and determined declaration for independence. Some of which are,

First—It is the custom of Nations, when any two are at war, for some other powers, not engaged in the quarrel, to step in as mediators, and bring about the preliminaries of a peace; But while America calls herself the subject of Great Britain, no power, however well disposed she may be, can offer her mediation. Wherefore, in our present state we may quarrel on for ever.

Secondly—It is unreasonable to suppose that France or Spain will give us any kind of assistance, if we mean only to make use of that assistance for the purpose of repairing the breach, and strengthening the connection between Britain and America; because, those powers would be sufferers by the consequences.

Thirdly—While we profess ourselves the subjects of Britain, we must, in the eyes of foreign nations, be considered as Rebels. The precedent is somewhat dangerous to their peace, for men to be in arms under the name of subjects; we, on the spot, can solve the paradox; but to unite resistance and subjection requires an idea much too refined for common understanding.

Fourthly—Were a manifesto to be published, and despatched to foreign Courts, setting forth the miseries we have endured, and the peaceful methods which we have ineffectually used for redress; declaring at the same time that not being able longer to live happily or safely under the cruel disposition of the British Court, we had been driven to the necessity of breaking off all connections with her; at the same time, assuring all such Courts of our peaceable disposition towards them, and of our desire of entering into trade with them; such a memorial would produce more good effects to this Continent than if a ship were freighted with petitions to Britain.

Under our present denomination of British subjects, we can neither be received nor heard abroad; the custom of all Courts is against us, and will be so, until by an independence we take rank with other nations.

These proceedings may at first seem strange and difficult, but like all other steps which we have already passed over, will in a little time become familiar and agreeable; and until an independence is declared, the Continent will feel itself like a man who continues putting off some unpleasant business from day to day, yet knows it must be done, hates to set about it, wishes it over, and is continually haunted with the thoughts of its necessity.

There is no way now, so many years later, to determine accurately the number of copies of *Common Sense* that were printed, sold, and read. Estimates range from 175,000 to 350,000, and it is not unlikely that the real total was close to or over 300,000. That would be ten percent of the entire population of America, or, translated into terms of a book published today, a sale of thirteen million copies. That would mean, proportionately, that *Common Sense* was the most extraordinary best seller in American history.

In those days there were no copyright laws. The first shipments of books Bell printed were immediately pirated, and printers all over the country set their own editions. Bell himself lost count of the number of copies he turned out on his creaking press, but the total was well over a hundred thousand. Editions were gotten out in Boston, Baltimore, Charleston; in Vermont, Connecticut, in Virginia and the Carolinas during the next ten months. Its influence was tremendous. More than any other single factor of the time, it united the colonies and swung the balance toward Independence.

In what did its appeal lie? Primarily, as I pointed out before, it was a call to action, and much of America's population thought in the realistic terms of action. Paine's headlong and melodramatic attack on monarchy found instant acceptance from a people whose every instinct was to fear and hate a hereditary aristocracy.

His arguments were couched in homely terms. In a time when colloquial writing was almost unknown, he found a language to which the average American was immediately responsive; not the speech of the man in the street but the vivid, fiery roar of the early Methodist and Baptist preachers. In literary terms it was as great a departure as the colloquial would have been, and it has since earned Paine the scorn of generations of critics. But Paine knew his problem, and he approached it soundly. He had an ear for speech, and all the many hours he had spent in England listening to the denunciations of Methodist preachers bore fruit. Note how carefully and cleverly he quotes scripture, mostly from the Old Testament, so dear to the Congregationalists and the Methodists. Note the rhythm of his arguments, the balanced repetition, so like the fierce and beautiful old Hebrew poetry.

Paine was amazingly sensitive to the Yankee; something in him gave him kinship and understanding; the American, boastful, emotional, proud, defiant, yet so amazingly sentimental, was a creature Paine knew from head to heels;—afterwards he suffered from the fact that he did not understand the French or the English half so well. Paine understood the Yankee's pride in his own common sense; that gave him his title and greatest selling point. "All was obvious," he wheedled; and he put things down in dollars and cents. On the surface, he was writing a practical book for practical people; actually he wrote a flaming call to arms, based on the eighteenth century philosophy of natural rights, and we may thank God that the people who read it were not exclusively practical.

Today, there seems to be nothing amazingly revolutionary in *Common Sense*; but when you read Paine, try to read him with the viewpoint of his day. Remember that he called for action in specific and not in abstract terms; he invited men to fight for freedom, whereas others invited men to think of it.

❧ TWO ❧

The Crisis Papers

THERE is no doubt that Paine was utterly dumfounded at the success of *Common Sense*. Catapulted overnight from his place as an anonymous Englishman to a position as foremost protagonist of the rebel cause, he was faced with a curious problem: should he go ahead with this strange, unprecedented trade of propagandist against tyranny? And if so, how should he go about it, and what was his position in this country hurtling toward war? The circumstances made the choice for him; the success of his pamphlet threw him into the forefront of the struggle, and only by the most craven resistance to his own belief in change could he have withdrawn. He did not withdraw, but at the same time, he did not become an American and identify himself completely with the cause of the patriots. He remained an Englishman, and in doing so broadened the whole base of the struggle and at least gropingly found a means whereby nationalism, in its true sense, could become a beginning for international peace and co-operation.

It is not my purpose here to go into the many adventures and experiences of Thomas Paine during the American Revolution. That tale is better told elsewhere; here we are concerned with the series of unique manifestoes which followed *Common Sense*, and which are known to history as *The Crisis Papers* or *The American Crisis*. These exhortations, some of them so magnificently potent that even today they take our breath away, have no precise duplication in history. Modern political leaders have written brilliant interpretations of changing situations; Winston Churchill has

spoken, time and again, words that rallied his whole country behind him; so has Franklin Roosevelt, so has Joseph Stalin. But, none of these is a counterpart to *The Crisis Papers*. Paine was not a political leader; he was not an enlisted soldier; he was an international volunteer who, at times of the deepest despair, spoke up clearly, confidently, and through some magic of his own, rallied the nation behind him. And this self-appointed task, he performed again and again.

Most dramatic, of course, partaking the quality of a legend, is the origin of the first *Crisis*. Paine had gone up into Jersey after the signing of the Declaration of Independence, a document which he considered the fruition of his plea, in *Common Sense*, for complete independence—and which, to a great extent, it was. He went with a group of Philadelphia volunteers, not as a soldier, but as a sort of civilian secretary to their commander. He needed a position of some kind, for he had refused all royalties from *Common Sense*.

At Amboy, the volunteers fell to pieces, as did so many volunteer regiments in the early days of the war. The men deserted and went home; Paine made his way to Fort Lee, where Washington's defeated army was taking a breathing spell. Paine stayed with that army on its heartbreaking retreat to the Delaware River. He lived with the men, marched with them, spoke with them, pleaded with them. His anomalous position, neither a soldier nor an officer, gave him entree to both groups.

If we accept the thesis, and there is much evidence for it, that out of a revolutionary situation will spring certain constant forms, then we may say that Paine became the political instructor to the ragged remnants of George Washington's army. At that time, and remember, it was in 1776, the American Revolution had not yet formulated itself; not in military structure, not in a dynamic ideology for those who fought. An army of twenty thousand had withered away to a few hundred beaten and hopeless men, and this in a period of months. Defeats and desertions robbed the American cause of thousands, and December of 1776 seemed close to the end.

And at that point, Paine wrote his first *American Crisis*.

How he came to write it is, as I said, already beclouded with legend. We do know that he accompanied Washington's army on

the retreat through Jersey, and we know that as the ranks thinned he became more and more of a focal point for whatever ideological strength could be gathered. And that strength became more and more important, as other revolutionists have discovered since. There is no doubt that, at a very low point, Washington asked the author of *Common Sense* whether he could not write something which would do, for this crucial situation, what his book had done for the cause of independence. Whether or not he wrote the *Crisis* on a drumhead, the cold and tattered Continentals gathered around him, is beside the point; time has given it that setting, just as time has robed so many American events with drama we love so much; and I, for one, would not disturb the legend.

We do know that Washington read this essay—we know that he was tremendously moved and ordered it to be read aloud to the assembled brigades. We can picture the scene, the few war-weary and tattered volunteers who had stayed by the cause, the dispirited officers, the lonely commander in chief who had yet to win a battle, and the sergeants-at-arms reading aloud for the first time those immortal words:

“These are the times that try men’s souls . . .”

At that point, I believe, Paine had written only a part of what was later published in Philadelphia; only the ringing, impassioned beginning and end. Yet what he added came up to that, and altogether the document is a work of genius, for me the most unique and constant part of all Paine’s writing. It is for no period, no time, but for the cause of free men always—and more than a century and a half later, the transmitters of the OWI, at a time when there were no victories for us to tell, sent the *Crisis* to all of Europe, where underground newspapers published once more the words with which Paine had rallied America in her darkest hour.

Printed in Philadelphia, the *Crisis* had, if anything, more of a success than *Common Sense*. That is understandable; it was short enough to be set in one block and printed with a single twist of the old up-and-down presses on a single sheet of paper. It was folded and sold as a pamphlet; it was posted everywhere as a bill. It was memorized by thousands, and the phrases “Summer soldier” and “Sunshine patriot,” were on every tongue. It became the battlecry

of the day, and the splendid moral tale of the Tory at Amboy drew a complete and hearty response from the deeply religious American population.

I think that the highest point in Paine's political understanding was reached during the years he wrote his series of *Crisis Papers*, the years between 1776 and 1783. In these seven years, moulded by history, reacting to history, and—and this is most important—understanding history, Paine produced a vital and lasting interpretation of a revolutionary movement. Neither in England nor in France, years later, did he succeed; now he let himself freely be shaped as an instrument of American freedom; in England and France, he tried to impose that same pattern, and thereby he failed. But that in its place.

With the *Crisis*, Paine began to complete his definition of the issues at stake in America. More than any other, he took these issues away from a locality and presented them, and the responsibility for them, to all mankind. He called upon mankind to strike for freedom. He defined men objectively, just as we are forced to today. He became the sparkplug for the fierce and necessary hatred that was growing between patriots and Tories, completing the process he began in *Common Sense*.

Reading the *Crisis Papers* you are presented with a curiously different slant on the American Revolution than what you might have had before. They take that struggle out of the histories and make it come alive. They give you only one small part of the picture, however, for Paine never admitted how bad things were; his propaganda was conscious, and he developed the method into an art. He told what it suited him to tell, and his telling was a weapon.

As to the effect of the *Crisis Papers*, that is hard to measure accurately. We know that in many instances he rallied the country with astonishing effect; on the other hand, some of the later *Crisis Papers* had much less influence. It is more important to see the Revolution as a whole, not the work of one man or another, but the work of many, many men, all operating within a frame of forces, and directing those forces through the conscious application of their will, determination, and courage. And of those men, Paine was by no means the least.

It should be noted that Paine saw a great deal of the war; he saw it from the battlefield and the encampment, and he saw it from the home front, there, I think, more clearly than anyone of his time.

The Crisis

NUMBER I

THESE are the times that try men's souls. The summer soldier and the sunshine patriot will in this crisis, shrink from the service of his country; but he that stands it NOW, deserves the love and thanks of man and woman. Tyranny, like hell, is not easily conquered; yet we have this consolation with us, that the harder the conflict, the more glorious the triumph. What we obtain too cheap, we esteem too lightly; 'tis dearness only that gives everything its value. Heaven knows how to put a proper price upon its goods; and it would be strange indeed, if so celestial an article as FREEDOM should not be highly rated. Britain, with an army to enforce her tyranny, has declared that she has a right (*not only to TAX*) but "*to BIND us in ALL CASES WHATSOEVER,*" and if being *bound in that manner*, is not slavery, then is there not such a thing as slavery upon earth. Even the expression is impious, for so unlimited a power can belong only to God.

Whether the independence of the continent was declared too soon, or delayed too long, I will not now enter into as an argument; my own simple opinion is, that had it been eight months earlier, it would have been much better. We did not make a proper use of last winter, neither could we, while we were in a dependent state. However, the fault, if it were one, was all our own; we have none to blame but ourselves. But no great deal is lost yet; all that Howe has been doing for this month past, is rather a ravage than a conquest, which the spirit of the Jerseys a year ago would have quickly repulsed, and which time and a little resolution will soon recover.

I have as little superstition in me as any man living, but my secret

opinion has ever been, and still is, that God Almighty will not give up a people to military destruction, or leave them unsupportedly to perish, who have so earnestly and so repeatedly sought to avoid the calamities of war, by every decent method which wisdom could invent. Neither have I so much of the infidel in me, as to suppose that he has relinquished the government of the world, and given us up to the care of devils; and as I do not, I cannot see on what grounds the king of Britain can look up to heaven for help against us: a common murderer, a highwayman, or a house-breaker, has as good a pretence as he.

'Tis surprising to see how rapidly a panic will sometimes run through a country. All nations and ages have been subject to them: Britain has trembled like an ague at the report of a French fleet of flat-bottomed boats; and in the fourteenth century the whole English army, after ravaging the kingdom of France, was driven back like men petrified with fear; and this brave exploit was performed by a few broken forces collected and headed by a woman, Joan of Arc. Would that heaven might inspire some Jersey maid to spirit up her countrymen, and save her fair fellow sufferers from ravage and ravishment! Yet panics, in some cases, have their uses; they produce as much good as hurt. Their duration is always short; the mind soon grows through them, and acquires a firmer habit than before. But their peculiar advantage is, that they are the touchstones of sincerity and hypocrisy, and bring things and men to light, which might otherwise have lain forever undiscovered. In fact, they have the same effect on secret traitors which an imaginary apparition would have upon a private murderer. They sift out the hidden thoughts of man, and hold them up in public to the world. Many a disguised tory has lately shown his head, that shall penitentially solemnize with curses the day on which Howe arrived upon the Delaware.

As I was with the troops at Fort Lee, and marched with them to the edge of Pennsylvania, I am well acquainted with many circumstances, which those who live at a distance, know but little or nothing of. Our situation there, was exceedingly cramped, the place being a narrow neck of land between the North River and the Hackensack. Our force was inconsiderable, being not one-fourth so great as Howe could bring against us. We had no army at hand to have relieved the garrison, had we shut ourselves up and stood on our defence. Our ammunition, light artillery, and the best part of our stores, had been removed, on the apprehension that Howe would endeavor to penetrate the Jerseys, in which case Fort Lee could be of no use to us; for it must occur to every thinking man, whether in the army or not, that these kind of field forts are only for temporary

purposes, and last in use no longer than the enemy directs his force against the particular object, which such forts are raised to defend. Such was our situation and condition at fort Lee on the morning of the 20th of November, when an officer arrived with information that the enemy with 200 boats had landed about seven miles above: Major General Green, who commanded the garrison, immediately ordered them under arms, and sent express to General Washington at the town of Hackensack, distant by the way of the ferry, six miles. Our first object was to secure the bridge over the Hackensack, which laid up the river between the enemy and us, about six miles from us, and three from them. General Washington arrived in about three quarters of an hour, and marched at the head of the troops towards the bridge, which place I expected we should have a brush for; however, they did not choose to dispute it with us, and the greatest part of our troops went over the bridge, the rest over the ferry except some which passed at a mill on a small creek, between the bridge and the ferry, and made their way through some marshy grounds up to the town of Hackensack, and there passed the river. We brought off as much baggage as the wagons could contain, the rest was lost. The simple object was to bring off the garrison, and march them on till they could be strengthened by the Jersey or Pennsylvania militia, so as to be enabled to make a stand. We stayed four days at Newark, collected our out-posts with some of the Jersey militia, and marched out twice to meet the enemy, on being informed that they were advancing, though our numbers were greatly inferior to theirs. Howe, in my little opinion, committed a great error in generalship in not throwing a body of forces off from Staten Island through Amboy, by which means he might have seized all our stores at Brunswick, and intercepted our march into Pennsylvania: but if we believe the power of hell to be limited, we must likewise believe that their agents are under some providential control.

I shall not now attempt to give all the particulars of our retreat to the Delaware; suffice for the present to say, that both officers and men, though greatly harassed and fatigued, without rest, covering, or provision, the inevitable consequences of a long retreat, bore it with a manly and martial spirit. All their wishes centred in one, which was, that the country would turn out and help them to drive the enemy back. Voltaire has remarked that King William never appeared to full advantage but in difficulties and in action; the same remark may be made on General Washington, for the character fits him. There is a natural firmness in some minds which cannot be unlocked by trifles, but which, when unlocked, discovers a cabinet of fortitude; and I reckon it among those kind of pub-

lic blessings, which we do not immediately see, that God hath blest him with uninterrupted health, and given him a mind that can even flourish upon care.

I shall conclude this paper with some miscellaneous remarks on the state of our affairs; and shall begin with asking the following question: Why is it that the enemy have left the New-England provinces, and made these middle ones the seat of war? The answer is easy: New-England is not infested with tories, and we are. I have been tender in raising the cry against these men, and I used numberless arguments to show them their danger, but it will not do to sacrifice a world either to their folly or their baseness. The period is now arrived, in which either they or we must change our sentiments, or one or both must fall. And what is a tory? Good God! what is he? I should not be afraid to go with a hundred whigs against a thousand tories, were they to attempt to get into arms. Every tory is a coward; for servile, slavish, self-interested fear is the foundation of toryism; and a man under such influence, though he may be cruel, never can be brave.

But, before the line of irrecoverable separation be drawn between us, let us reason the matter together: your conduct is an invitation to the enemy, yet not one in a thousand of you has heart enough to join him. Howe is as much deceived by you as the American cause is injured by you. He expects you will all take up arms, and flock to his standard, with muskets on your shoulders. Your opinions are of no use to him, unless you support him personally, for 'tis soldiers, and not tories that he wants.

I once felt all that kind of anger, which a man ought to feel, against the mean principles that are held by the tories: a noted one, who kept a tavern at Amboy, was standing at his door, with as pretty a child in his hand, about eight or nine years old, as I ever saw, and after speaking his mind as freely as he thought was prudent, finished with this unfatherly expression, "*Well! give me peace in my day.*" Not a man lives on the continent but fully believes that a separation must some time or other finally take place, and a generous parent should have said, "*If there must be trouble let it be in my day, that my child may have peace;*" and this single reflection, well applied, is sufficient to awaken every man to duty. Not a place upon earth might be so happy as America. Her situation is remote from all the wrangling world, and she has nothing to do but to trade with them. A man can distinguish himself between temper and principle, and I am as confident, as I am that God governs the world, that America will never be happy till she gets clear of foreign dominion. Wars, without ceasing, will break out till that period arrives, and the continent

must in the end be conqueror; for though the flame of liberty may sometimes cease to shine, the coal can never expire.

America did not, nor does not want force; but she wanted a proper application of that force. Wisdom is not the purchase of a day, and it is no wonder that we should err at the first setting off. From an excess of tenderness, we were unwilling to raise an army, and trusted our cause to the temporary defence of a well-meaning militia. A summer's experience has now taught us better; yet with those troops, while they were collected, we were able to set bounds to the progress of the enemy, and, thank God! they are again assembling. I always consider militia as the best troops in the world for a sudden exertion, but they will not do for a long campaign. Howe, it is probable, will make an attempt on this city; should he fail on this side the Delaware, he is ruined: if he succeeds, our cause is not ruined. He stakes all on his side against a part on ours; admitting he succeeds, the consequence will be, that armies from both ends of the continent will march to assist their suffering friends in the middle states; for he cannot go everywhere; it is impossible. I consider Howe the greatest enemy the tories have; he is bringing a war into their country, which, had it not been for him and partly for themselves, they had been clear of. Should he now be expelled, I wish with all the devotion of a *Christian*, that the names of whig and tory may never more be mentioned; but should the tories give him encouragement to come, or assistance if he come, I as sincerely wish that our next year's arms may expel them from the continent, and that congress appropriate their possessions to the relief of those who have suffered in well doing. A single successful battle next year will settle the whole. America could carry on a two years' war by the confiscation of the property of disaffected persons; and be made happy by their expulsion. Say not that this is revenge, call it rather the soft resentment of a suffering people, who, having no object in view but the *good of all*, have staked their *own all* upon a seemingly doubtful event. Yet it is folly to argue against determined hardness; eloquence may strike the ear, and the language of sorrow draw forth the tear of compassion, but nothing can reach the heart that is steeled with prejudice.

Quitting this class of men, I turn with the warm ardor of a friend to those who have nobly stood, and are yet determined to stand the matter out: I call not upon a few, but upon all; not on *this* state or *that* state, but on *every* state; up and help us; lay your shoulders to the wheel; better have too much force than too little, when so great an object is at stake. Let it be told to the future world, that in the depth of winter, when

nothing but hope and virtue could survive, that the city and the country, alarmed at one common danger, came forth to meet and to repulse it. Say not that thousands are gone, turn out your tens of thousands; throw not the burden of the day upon Providence, but "*show your faith by your works,*" that God may bless you. It matters not where you live, or what rank of life you hold, the evil or the blessing will reach you all. The far and the near, the home counties and the back, the rich and the poor, will suffer or rejoice alike. The heart that feels not now, is dead: the blood of his children will curse his cowardice, who shrinks back at a time when a little might have saved the whole, and made *them* happy. (I love the man that can smile at trouble; that can gather strength from distress, and grow brave by reflection.) 'Tis the business of little minds to shrink; but he whose heart is firm, and whose conscience approves his conduct, will pursue his principles unto death. My own line of reasoning is to myself as straight and clear as a ray of light. Not all the treasures of the world, so far as I believe, could have induced me to support an offensive war, for I think it murder; but if a thief breaks into my house, burns and destroys my property, and kills or threatens to kill me, or those that are in it, and to "*bind me in all cases whatsoever,*" to his absolute will, am I to suffer it? What signifies it to me, whether he who does it is a king or a common man; my countryman, or not my countryman; whether it be done by an individual villain or an army of them? If we reason to the root of things we shall find no difference; neither can any just cause be assigned why we should punish in the one case and pardon in the other. Let them call me rebel, and welcome, I feel no concern from it; but I should suffer the misery of devils, were I to make a whore of my soul by swearing allegiance to one whose character is that of a sottish, stupid, stubborn, worthless, brutish man. I conceive likewise a horrid idea in receiving mercy from a being, who at the last day shall be shrieking to the rocks and mountains to cover him, and fleeing with terror from the orphan, the widow, and the slain of America.

There are cases which cannot be overdone by language, and this is one. There are persons too who see not the full extent of the evil which threatens them; they solace themselves with hopes that the enemy, if he succeed, will be merciful. Is this the madness of folly, to expect mercy from those who have refused to do justice; and even mercy, where conquest is the object, is only a trick of war; the cunning of the fox is as murderous as the violence of the wolf; and we ought to guard equally against both. Howe's first object is partly by threats and partly by prom-

ises, to terrify or seduce the people to deliver up their arms and to receive mercy. The ministry recommended the same plan to Gage, and this is what the tories call making their peace, "*a peace which passeth all understanding*," indeed! A peace which would be the immediate forerunner of a worse ruin than any we have yet thought of. Ye men of Pennsylvania, do reason upon these things! Were the back counties to give up their arms, they would fall an easy prey to the Indians, who are all armed; this perhaps is what some tories would not be sorry for. Were the home counties to deliver up their arms, they would be exposed to the resentment of the back counties, who would then have it in their power to chastise their defection at pleasure. And were any one state to give up its arms, *that* state must be garrisoned by Howe's army of Britains and Hessians to preserve it from the anger of the rest. Mutual fear is the principal link in the chain of mutual love, and woe be to that state that breaks the compact. Howe is mercifully inviting you to barbarous destruction, and men must be either rogues or fools that will not see it. I dwell not upon the powers of imagination; I bring reason to your ears; and in language as plain as A, B, C, hold up truth to your eyes.

I thank God that I fear not. I see no real cause for fear. I know our situation well and can see the way out of it. While our army was collected, Howe dared not risk a battle, and it is no credit to him that he decamped from the White Plains, and waited a mean opportunity to ravage the defenceless Jerseys; but it is great credit to us, that, with a handful of men, we sustained an orderly retreat for near an hundred miles, brought off our ammunition, all our field pieces, the greatest part of our stores, and had four rivers to pass. None can say that our retreat was precipitate, for we were near three weeks in performing it, that the country might have time to come in. Twice we marched back to meet the enemy, and remained out till dark. The sign of fear was not seen in our camp, and had not some of the cowardly and disaffected inhabitants spread false alarms through the country, the Jerseys had never been ravaged. Once more we are again collected and collecting, our new army at both ends of the continent is recruiting fast, and we shall be able to open the next campaign with sixty thousand men, well armed and clothed. This is our situation, and who will may know it. By perseverance and fortitude we have the prospect of a glorious issue; by cowardice and submission, the sad choice of a variety of evils—a ravaged country—a depopulated city—habitations without safety, and slavery without hope—our homes turned into barracks and bawdy-houses for Hessians, and a

future race to provide for, whose fathers we shall doubt of. Look on this picture and weep over it! and if there yet remains one thoughtless wretch who believes it not, let him suffer it unlamented.

The Crisis

NUMBER IV

THOSE who expect to reap the blessings of freedom, must, like men, undergo the fatigues of supporting it. The event of yesterday was one of those kind of alarms which is just sufficient to rouse us to duty, without being of consequence enough to depress our fortitude. It is not a field of a few acres of ground, but a cause, that we are defending, and whether we defeat the enemy in one battle, or by degrees, the consequences will be the same.

Look back at the events of last winter and the present year, there you will find that the enemy's successes always contributed to reduce them. What they have gained in ground, they paid so dearly for in numbers, that their victories have in the end amounted to defeats. We have always been masters at the last push, and always shall be while we do our duty. Howe has been once on the banks of the Delaware, and from thence driven back with loss and disgrace: and why not be again driven from the Schuylkill? His condition and ours are very different. He has everybody to fight, we have only his *one* army to cope with, and which wastes away at every engagement: we can not only reinforce, but can redouble our numbers; he is cut off from all supplies, and must sooner or later inevitably fall into our hands.

Shall a band of ten or twelve thousand robbers, who are this day fifteen hundred or two thousand men less in strength than they were yesterday, conquer America, or subdue even a single state? The thing cannot be, unless we sit down and suffer them to do it. Another such a brush, notwithstanding we lost the ground, would, by still reducing the enemy, put them in a condition to be afterwards totally defeated.

Could our whole army have come up to the attack at one time, the

consequences had probably been otherwise; but our having different parts of the Brandywine creek to guard, and the uncertainty which road to Philadelphia the enemy would attempt to take, naturally afforded them an opportunity of passing with their main body at a place where only a part of ours could be posted; for it must strike every thinking man with conviction, that it requires a much greater force to oppose an enemy in several places, than is sufficient to defeat him in any one place.

Men who are sincere in defending their freedom, will always feel concern at every circumstance which seems to make against them; it is the natural and honest consequence of all affectionate attachments, and the want of it is a vice. But the dejection lasts only for a moment; they soon rise out of it with additional vigor; the glow of hope, courage and fortitude, will, in a little time, supply the place of every inferior passion, and kindle the whole heart into heroism.

There is a mystery in the countenance of some causes, which we have not always present judgment enough to explain. It is distressing to see an enemy advancing into a country, but it is the only place in which we can beat them, and in which we have always beaten them, whenever they made the attempt. The nearer any disease approaches to a crisis, the nearer it is to a cure. Danger and deliverance make their advances together, and it is only the last push, in which one or the other takes the lead.

There are many men who will do their duty when it is not wanted; but a genuine public spirit always appears most when there is most occasion for it. Thank God! our army, though fatigued, is yet entire. The attack made by us yesterday, was under many disadvantages, naturally arising from the uncertainty of knowing which route the enemy would take; and, from that circumstance, the whole of our force could not be brought up together time enough to engage all at once. Our strength is yet reserved; and it is evident that Howe does not think himself a gainer by the affair, otherwise he would this morning have moved down and attacked General Washington.

Gentlemen of the city and country, it is in your power, by a spirited improvement of the present circumstance, to turn it to a real advantage. Howe is now weaker than before, and every shot will contribute to reduce him. You are more immediately interested than any other part of the continent: your all is at stake; it is not so with the general cause; you are devoted by the enemy to plunder and destruction: it is the encouragement which Howe, the chief of plunderers, has promised his army. Thus circumstanced, you may save yourselves by a manly resist-

ance, but you can have no hope in any other conduct. I never yet knew our brave general, or any part of the army, officers or men, out of heart, and I have seen them in circumstances a thousand times more trying than the present. It is only those that are not in action, that feel languor and heaviness, and the best way to rub it off is to turn out, and make sure work of it.

Our army must undoubtedly feel fatigue, and want a reinforcement of rest though not of valour. Our own interest and happiness call upon us to give them every support in our power, and make the burden of the day, on which the safety of this city depends, as light as possible. Remember, gentlemen, that we have forces both to the northward and southward of Philadelphia, and if the enemy be but stopped till those can arrive, this city will be saved, and the enemy finally routed. You have too much at stake to hesitate. You ought not to think an hour upon the matter, but to spring to action at once. Other states have been invaded, have likewise driven off the invaders. Now our time and turn is come, and perhaps the finishing stroke is reserved for us. When we look back on the dangers we have been saved from, and reflect on the success we have been blessed with, it would be sinful either to be idle or to despair.

I close this paper with a short address to general Howe. You, sir, are only lingering out the period that shall bring with it your defeat. You have yet scarce began upon the war, and the further you enter, the faster will your troubles thicken. What you now enjoy is only a respite from ruin; an invitation to destruction; something that will lead on to our deliverance at your expense. We know the cause which we are engaged in, and though a passionate fondness for it may make us grieve at every injury which threatens it, yet, when the moment of concern is over, the determination to duty returns. We are not moved by the gloomy smile of a worthless king, but by the ardent glow of generous patriotism. We fight not to enslave, but to set a country free, and to make room upon the earth for honest men to live in. In such a case we are sure that we are right; and we leave to you the despairing reflection of being the tool of a miserable tyrant.

PHILADELPHIA, Sept. 12, 1777.

COMMON SENSE

The Crisis

NUMBER V

TO GEN. SIR WILLIAM HOWE

To argue with a man who has renounced the use and authority of reason, and whose philosophy consists in holding humanity in contempt, is like administering medicine to the dead, or endeavoring to convert an atheist by scripture. Enjoy, sir, your insensibility of feeling and reflecting. It is the prerogative of animals. And no man will envy you these honors, in which a savage only can be your rival and a bear your master.

As the generosity of this country rewarded your brother's services last war, with an elegant monument in Westminster Abbey, it is consistent that she should bestow some mark of distinction upon you. You certainly deserve her notice, and a conspicuous place in the catalogue of extraordinary persons. Yet it would be a pity to pass you from the world in state, and consign you to magnificent oblivion among the tombs, without telling the future beholder why. Judas is as much known as John, yet history ascribes their fame to very different actions.

Sir William hath undoubtedly merited a monument; but of what kind, or with what inscription, where placed or how embellished, is a question that would puzzle all the heralds of St. James's in the profoundest mood of historical deliberation. We are at no loss, sir, to ascertain your real character, but somewhat perplexed how to perpetuate its identity, and preserve it uninjured from the transformations of time or mistake. A statuary may give a false expression to your bust, or decorate it with some equivocal emblems, by which you may happen to steal into reputation and impose upon the hereafter traditionary world. Ill nature or ridicule may conspire, or a variety of accidents combine to lessen, enlarge, or change Sir William's fame; and no doubt but he who has taken so much pains to be singular in his conduct, would choose to be just as singular in his exit, his monument and his epitaph.

The usual honours of the dead, to be sure, are not sufficiently sublime to escort a character like you to the republic of dust and ashes; for however men may differ in their ideas of grandeur or of government here, the grave is nevertheless a perfect republic. Death is not the monarch of the dead, but of the dying. The moment he obtains a conquest he loses a subject, and, like the foolish king you serve, will, in the end, war himself out of all his dominions.

As a proper preliminary towards the arrangement of your funeral honours, we readily admit of your new rank of *knighthood*. The title is perfectly in character, and is your own, more by merit than creation. There are knights of various orders, from the knight of the windmill to the knight of the post. The former is your patron for exploits, and the latter will assist you in settling your accounts. No honorary title could be more happily applied! The ingenuity is sublime! And your royal master hath discovered more genius in fitting you therewith, than in generating the most finished figure for a button, or descanting on the properties of a button mould.

But how, sir, shall we dispose of you? The invention of a statuary is exhausted, and Sir William is yet unprovided with a monument. America is anxious to bestow her funeral favours upon you, and wishes to do it in a manner that shall distinguish you from all the deceased heroes of the last war. The Egyptian method of embalming is not known to the present age, and hieroglyphical pageantry hath outlived the science of decyphering it. Some other method, therefore, must be thought of to immortalise the new knight of the windmill and post. Sir William, thanks to his stars, is not oppressed with very delicate ideas. He has no ambition of being wrapped up and handed about in myrrh, aloes and cassia. Less expensive odours will suffice; and it fortunately happens that the simple genius of America hath discovered the art of preserving bodies, and embellishing them too, with much greater frugality than the ancients. In balmage, sir, of humble tar, you will be as secure as Pharaoh, and in a hieroglyphic of feathers, rival in finery all the mummies of Egypt.

As you have already made your exit from the moral world, and by numberless acts both of passionate and deliberate injustice engraved an "*here lyeth*" on your deceased honour, it must be mere affectation in you to pretend concern at the humours or opinions of mankind respecting you. What remains of you may expire at any time. The sooner the better. For he who survives his reputation, lives out of despite of himself, like a man listening to his own reproach.

Thus entombed and ornamented, I leave you to the inspection of the curious, and return to the history of your yet surviving actions. The character of Sir William hath undergone some extraordinary revolutions since his arrival in America. It is now fixed and known; and we have nothing to hope from your candour or to fear from your capacity. Indolence and inability have too large a share in your composition, ever to suffer you to be anything more than the hero of little villainies and unfinished adventures. That, which to some persons appeared modera-

tion in you at first, was not produced by any real virtue of your own, but by a contrast of passions, dividing and holding you in perpetual irresolution. One vice will frequently expel another, without the least merit in the man; as powers in contrary directions reduce each other to rest.

It became you to have supported a dignified solemnity of character; to have shown a superior liberality of soul; to have won respect by an obstinate perseverance in maintaining order, and to have exhibited on all occasions such an unchangeable graciousness of conduct, that while we beheld in you the resolution of an enemy, we might admire in you the sincerity of a man. You came to America under the high sounding titles of commander and commissioner; not only to suppress what you call rebellion, by arms, but to shame it out of countenance by the excellence of your example. Instead of which, you have been the patron of low and vulgar frauds, the encourager of Indian cruelties; and have imported a cargo of vices blacker than those which you pretend to suppress.

Mankind are not universally agreed in their determination of right and wrong; but there are certain actions which the consent of all nations and individuals hath branded with the unchangeable name of *meanness*. In the list of human vices we find some of such a refined constitution, they cannot be carried into practice without seducing some virtue to their assistance; but *meanness* hath neither alliance nor apology. It is generated in the dust and sweepings of other vices, and is of such a hateful figure that all the rest conspire to disown it. Sir William, the commissioner of George the third, hath at last vouchsafed to give it rank and pedigree. He has placed the fugitive at the council board, and dubbed it companion of the order of knighthood.

The particular act of meanness which I allude to in this description, is forgery. You, sir, have abetted and patronised the forging and uttering counterfeit continental bills. In the same New-York newspapers in which your own proclamation under your master's authority was published, offering, or pretending to offer, pardon and protection to these states, there were repeated advertisements of counterfeit money for sale, and persons who have come officially from you, and under the sanction of your flag, have been taken up in attempting to put them off.

A conduct so basely mean in a public character is without precedent or pretence. Every nation on earth, whether friends or enemies, will unite in despising you. 'Tis an incendiary war upon society, which nothing can excuse or palliate,—an improvement upon beggarly villainy—and shows an inbred wretchedness of heart made up between the venomous malignity of a serpent and the spiteful imbecility of an inferior reptile.

The laws of any civilized country would condemn you to the gibbet without regard to your rank or titles, because it is an action foreign to the usage and custom of war; and should you fall into our hands, which pray God you may, it will be a doubtful matter whether we are to consider you as a military prisoner or a prisoner for felony.

Besides, it is exceedingly unwise and impolitic in you, or any other persons in the English service, to promote or even encourage, or wink at the crime of forgery, in any case whatever. Because, as the riches of England, as a nation, are chiefly in paper, and the far greater part of trade among individuals is carried on by the same medium, that is, by notes and drafts on one another, they, therefore, of all people in the world, ought to endeavour to keep forgery out of sight, and, if possible, not to revive the idea of it. It is dangerous to make men familiar with a crime which they may afterwards practise to much greater advantage against those who first taught them. Several officers in the English army have made their exit at the gallows for forgery on their agents; for we all know, who know any thing of England, that there is not a more necessitous body of men, taking them generally, than what the English officers are. They contrive to make a show at the expense of the tailors, and appear clean at the charge of the washer-women.

England, hath at this time, nearly two hundred million pounds sterling of public money in paper, for which she hath no real property: besides a large circulation of bank notes, bank post bills, and promissory notes and drafts of private bankers, merchants and tradesmen. She hath the greatest quantity of paper currency and the least quantity of gold and silver of any nation in Europe; the real specie, which is about sixteen millions sterling, serves only as change in large sums, which are always made in paper, or for payment in small ones. Thus circumstanced, the nation is put to its wit's end, and obliged to be severe almost to criminality, to prevent the practice and growth of forgery. Scarcely a session passes at the Old Bailey, or an execution at Tyburn, but witnesseth this truth, yet you, sir, regardless of the policy which her necessity obliges her to adopt, have made your whole army intimate with the crime. And as all armies at the conclusion of a war, are too apt to carry into practice the vices of the campaign, it will probably happen, that England will hereafter abound in forgeries, to which art the practitioners were first initiated under your authority in America. You, sir, have the honour of adding a new vice to the military catalogue; and the reason, perhaps, why the invention was reserved for you, is, because no general before was mean enough even to think of it.

That a man whose soul is absorbed in the low traffic of vulgar vice, is incapable of moving in any superior region, is clearly shown in you by the event of every campaign. Your military exploits have been without plan, object or decision. Can it be possible that you or your employers suppose that the possession of Philadelphia will be any ways equal to the expense or expectation of the nation which supports you? What advantages does England derive from any achievements of yours? To *her* it is perfectly indifferent what place you are in, so long as the business of conquest is unperformed and the charge of maintaining you remains the same.

If the principal events of the three campaigns be attended to, the balance will appear against you at the close of each; but the last, in point of importance to us, has exceeded the former two. It is pleasant to look back on dangers past, and equally as pleasant to meditate on present ones when the way out begins to appear. That period is now arrived, and the long doubtful winter of war is changing to the sweeter prospects of victory and joy. At the close of the campaign, in 1775, you were obliged to retreat from Boston. In the summer of 1776, you appeared with a numerous fleet and army in the harbor of New-York. By what miracle the continent was preserved in that season of danger is a subject of admiration! If instead of wasting your time against Long-Island you had run up the North river, and landed any where above New-York, the consequence must have been, that either you would have compelled general Washington to fight you with very unequal numbers, or he must have suddenly evacuated the city with the loss of nearly all the stores of his army, or have surrendered for want of provisions; the situation of the place naturally producing one or the other of these events.

The preparations made to defend New-York were, nevertheless, wise and military; because your forces were then at sea, their numbrs uncertain; storms, sickness, or a variety of accidents might have disabled their coming, or so diminished them on their passage, that those which survived would have been incapable of opening the campaign with any prospect of success; in which case the defence would have been sufficient and the place preserved; for cities that have been raised from nothing with an infinitude of labour and expense, are not to be thrown away on the bare probability of their being taken. On these grounds the preparations made to maintain New-York were as judicious as the retreat afterwards. While you, in the interim, let slip the *very* opportunity which seemed to put conquest in your power.

Through the whole of that campaign you had nearly double the forces

which general Washington immediately commanded. The principal plan at that time, on our part, was to wear away the season with as little loss as possible, and to raise the army for the next year. Long-Island, New-York, forts Washington and Lee were not defended after your superior force was known under any expectation of their being finally maintained, but as a range of outworks, in the attacking of which your time might be wasted, your numbers reduced, and your vanity amused by possessing them on our retreat. It was intended to have withdrawn the garrison from fort Washington after it had answered the former of those purposes, but the fate of that day put a prize into your hands without much honor to yourselves.

Your progress through the Jerseys was accidental; you had it not even in contemplation, or you would not have sent a principal part of your forces to Rhode-Island beforehand. The utmost hope of America in the year 1776, reached no higher than that she might not then be conquered. She had no expectation of defeating you in that campaign. Even the most cowardly tory allowed, that, could she withstand the shock of *that* summer, her independence would be past a doubt. You had *then* greatly the advantage of her. You were formidable. Your military knowledge was supposed to be complete. Your fleets and forces arrived without an accident. You had neither experience nor reinforcements to wait for. You had nothing to do but to begin, and your chance lay in the first vigorous onset.

America was young and unskilled. She was obliged to trust her defence to time and practice; and hath, by mere dint of perseverance, maintained her cause, and brought the enemy to a condition, in which she is now capable of meeting him on any grounds.

It is remarkable that in the campaign of 1776 you gained no more, notwithstanding your great force, than what was given you by consent of evacuation, except fort Washington; while every advantage obtained by us was by fair and hard fighting. The defeat of Sir Peter Parker was complete. The conquest of the Hessians at Trenton, by the remains of a retreating army, which but a few days before you affected to despise, is an instance of their heroic perseverance very seldom to be met with. And the victory over the British troops at Princeton, by a harassed and wearied party, who had been engaged the day before and marched all night without refreshment, is attended with such a scene of circumstances and superiority of generalship, as will ever give it a place in the first rank in the history of great actions.

When I look back on the gloomy days of last winter, and see America

suspended by a thread, I feel a triumph of joy at the recollection of her delivery, and a reverence for the characters which snatched her from destruction. To doubt *now* would be a species of infidelity, and to forget the instruments which saved us *then* would be ingratitude.

The close of that campaign left us with the spirit of conquerors. The northern districts were relieved by the retreat of general Carleton over the lakes. The army under your command were hunted back and had their bounds prescribed. The continent began to feel its military importance, and the winter passed pleasantly away in preparations for the next campaign.

However confident you might be on your first arrival, the result of the year 1776 gave you some idea of the difficulty, if not impossibility of conquest. To this reason I ascribe your delay in opening the campaign of 1777. The face of matters, on the close of the former year, gave you no encouragement to pursue a discretionary war as soon as the spring admitted the taking the field; for though conquest, in that case, would have given you a double portion of fame, yet the experiment was too hazardous. The ministry, had you failed, would have shifted the whole blame upon you, charged you with having acted without orders, and condemned at once both your plan and execution.

To avoid the misfortunes, which might have involved you and your money accounts in perplexity and suspicion, you prudently waited the arrival of a plan of operations from England, which was that you should proceed for Philadelphia by way of the Chesapeake, and that Burgoyne, after reducing Ticonderoga, should take his route by Albany, and, if necessary, join you.

The splendid laurels of the last campaign have flourished in the north. In that quarter America has surprised the world, and laid the foundation of this year's glory. The conquest of Ticonderoga, (if it may be called a conquest) has, like all your other victories, led on to ruin. Even the provisions taken in that fortress (which by general Burgoyne's return was sufficient in bread and flour for nearly 5000 men for ten weeks, and in beef and pork for the same number of men for one month) served only to hasten his overthrow, by enabling him to proceed to Saratoga, the place of his destruction. A short review of the operations of the last campaign will show the condition of affairs on both sides.

You have taken Ticonderoga and marched into Philadelphia. These are all the events which the year hath produced on your part. A trifling campaign indeed, compared with the expenses of England and the conquest of the continent. On the other side, a considerable part of your

northern force has been routed by the New-York militia under general Herkemer. Fort Stanwix has bravely survived a compound attack of soldiers and savages, and the besiegers have fled. The battle of Bennington has put a thousand prisoners into our hands, with all their arms, stores, artillery and baggage. General Burgoyne, in two engagements, has been defeated; himself, his army, and all that were his and theirs are now ours. Ticonderoga and Independence [forts] are retaken, and not the shadow of an enemy remains in all the northern districts. At this instant we have upwards of eleven thousand prisoners, between sixty and seventy [captured] pieces of brass ordnance, besides small arms, tents, stores, etc.

In order to know the real value of those advantages, we must reverse the scene, and suppose general Gates and the force he commanded, to be at your mercy as prisoners, and general Burgoyne, with his army of soldiers and savages, to be already joined to you in Pennsylvania. So dismal a picture can scarcely be looked at. It has all the tracings and colorings of horror and despair; and excites the most swelling emotions of gratitude by exhibiting the miseries we are so graciously preserved from.

I admire the distribution of laurels around the continent. It is the earnest of future union. South-Carolina has had her day of sufferings and of fame; and the other southern states have exerted themselves in proportion to the force that invaded or insulted them. Towards the close of the campaign, in 1776, these middle states were called upon and did their duty nobly. They were witnesses to the almost expiring flame of human freedom. It was the close struggle of life and death, the line of invisible division; and on which the unabated fortitude of a Washington prevailed, and saved the spark that has since blazed in the north with unrivalled lustre.

Let me ask, sir, what great exploits have you performed? Through all the variety of changes and opportunities which the war has produced, I know no one action of yours that can be styled masterly. You have moved in and out, backward and forward, round and round, as if valor consisted in a military jig. The history and figure of your movements would be truly ridiculous could they be justly delineated. They resemble the labours of a puppy pursuing his tail; the end is still at the same distance, and all the turnings round must be done over again.

The first appearance of affairs at Ticonderoga wore such an unpromising aspect, that it was necessary, in July, to detach a part of the forces to the support of that quarter, which were otherwise destined or intended to act against you; and this, perhaps, has been the means of postponing

your downfall to another campaign. The destruction of one army at a time is work enough. We know, sir, what we are about, what we have to do, and how to do it.

Your progress from the Chesapeake, was marked by no capital stroke of policy or heroism. Your principal aim was to get general Washington between the Delaware and Schuylkill, and between Philadelphia and your army. In that situation, with a river on each of his flanks, which united about five miles below the city, and your army above him, you could have intercepted his reinforcements and supplies, cut off all his communication with the country, and, if necessary, have despatched assistance to open a passage for general Burgoyne. This scheme was too visible to succeed: for had general Washington suffered you to command the open country above him, I think it a very reasonable conjecture that the conquest of Burgoyne would not have taken place, because you could, in that case, have relieved him. It was therefore necessary, while that important victory was in suspense, to trepan *you* into a situation in which you could *only* be on the defensive, without the power of affording him assistance. The manœuvre had its effect, and Burgoyne was conquered.

There has been something unmilitary and passive in you from the time of your passing the Schuylkill and getting possession of Philadelphia, to the close of the campaign. You mistook a trap for a conquest, the probability of which had been made known to Europe, and the edge of your triumph taken off by our own information long before.

Having got you into this situation, a scheme for a general attack upon you at Germantown was carried into execution on the 4th of October, and though the success was not equal to the excellence of the plan, yet the attempting it proved the genius of America to be on the rise, and her power approaching to superiority. The obscurity of the morning was your best friend, for a fog is always favourable to a hunted enemy. Some weeks after this you likewise planned an attack on general Washington, while at Whitemarch. You marched out with infinite parade, but on finding him preparing to attack you next morning, you prudently turned about, and retreated to Philadelphia with all the precipitation of a man conquered in imagination.

Immediately after the battle of Germantown, the probability of Burgoyne's defeat gave a new policy to affairs in Pennsylvania, and it was judged most consistent with the general safety of America, to wait the issue of the northern campaign. Slow and sure is sound work. The news of that victory arrived in our camp on the 18th of October, and no sooner

did that shout of joy, and the report of the thirteen cannon reach your ears, than you resolved upon a retreat, and the next day, that is, on the 19th, you withdrew your drooping army into Philadelphia. This movement was evidently dictated by fear; and carried with it a positive confession that you dreaded a second attack. It was hiding yourself among women and children, and sleeping away the choicest part of the campaign in expensive inactivity. An army in a city can never be a conquering army. The situation admits only of defence. It is mere shelter: and every military power in Europe will conclude you to be eventually defeated.

The time when you made this retreat was the very time you ought to have fought a battle, in order to put yourself in condition of recovering in Pennsylvania what you had lost in Saratoga. And the reason why you did not, must be either prudence or cowardice; the former supposes your inability, and the latter needs no explanation. I draw no conclusions, sir, but such as are naturally deduced from known and visible facts, and such as will always have a being while the facts which produced them remain unaltered.

After this retreat a new difficulty arose which exhibited the power of Britain in a very contemptible light; which was the attack and defence of Mud-Island. For several weeks did that little unfinished fortress stand out against all the attempts of admiral and general Howe. It was the fable of Bender realized on the Delaware. Scheme after scheme, and force upon force were tried and defeated. The garrison, with scarce anything to cover them but their bravery, survived in the midst of mud, shot and shells, and were at last obliged to give it up more to the powers of time and gunpowder than to military superiority of the besiegers.

It is my sincere opinion that matters are in much worse condition with you than what is generally known. Your master's speech at the opening of parliament, is like a soliloquy on ill luck. It shows him to be coming a little to his reason, for sense of pain is the first symptom of recovery, in profound stupefaction. His condition is deplorable. He is obliged to submit to all the insults of France and Spain, without daring to know or resent them; and thankful for the most trivial evasions to the most humble remonstrances. The time *was* when he could not deign an answer to a petition from America, and the time now *is* when he dare not give an answer to an affront from France. The capture of Burgoyne's army will sink his consequence as much in Europe as in America. In his speech he expresses his suspicions at the warlike preparations of France and Spain, and as he has only the one army which you command to sup-

port his character in the world with, it remains very uncertain when, or in what quartet it will be most wanted, or can be best employed; and this will partly account for the great care you take to keep it from action and attacks, for should Burgoyne's fate be yours, which it probably will, England may take her endless farewell not only of all America but of all the West-Indies.

Never did a nation invite destruction upon itself with the eagerness and the ignorance with which Britain has done. Bent upon the ruin of a young and unoffending country, she has drawn the sword that has wounded herself to the heart, and in the agony of her resentment has applied a poison for a cure. Her conduct towards America is a compound of rage and lunacy; she aims at the government of it, yet preserves neither dignity nor character in her methods to obtain it. Were government a mere manufacture or article of commerce, immaterial by whom it should be made or sold, we might as well employ her as another, but when we consider it as the fountain from whence the general manners and morality of a country take their rise, that the persons entrusted with the execution thereof are by their serious example an authority to support these principles, how abominably absurd is the idea of being hereafter governed by a set of men who have been guilty of forgery, perjury, treachery, theft and every species of villainy which the lowest wretches on earth could practise or invent. What greater public curse can befall any country than to be under such authority, and what greater blessing than to be delivered therefrom. The soul of any man of sentiment would rise in brave rebellion against them, and spurn them from the earth.

The malignant and venomous tempered general Vaughan has amused his savage fancy in burning the whole town of Kingston, in York government, and the late governor of that state, Mr. Tryon, in his letter to general Parsons, has endeavoured to justify it and declared his wish to burn the houses of every committeeman in the country. Such a confession from one who was once intrusted with the powers of civil government, is a reproach to the character. But it is the wish and the declaration of a man whom anguish and disappointment have driven to despair, and who is daily decaying into the grave with constitutional rottenness.

There is not in the compass of language a sufficiency of words to express the baseness of your king, his ministry and his army. They have refined upon villainy till it wants a name. To the fiercer vices of former ages they have added the dregs and scummings of the most finished rascality, and are so completely sunk in serpentine deceit, that there is not left among them *one* generous enemy.

From such men and such masters, may the gracious hand of Heaven preserve America! And though the sufferings she now endures are heavy, and severe, they are like straws in the wind compared to the weight of evils she would feel under the government of your king, and his pensioned parliament.

There is something in meanness which excites a species of resentment that never subsides, and something in cruelty which stirs up the heart to the highest agony of human hatred; Britain hath filled up both these characters till no addition can be made, and hath not reputation left with us to obtain credit for the slightest promise. The will of God hath parted us, and the deed is registered for eternity. When she shall be a spot scarcely visible among the nations, America shall flourish the favourite of heaven, and the friend of mankind.

For the domestic happiness of Britain and the peace of the world, I wish she had not a foot of land but what is circumscribed within her own island. Extent of dominion has been her ruin, and instead of civilizing others has brutalized herself. Her late reduction of India, under Clive and his successors, was not so properly a conquest as an extermination of mankind. She is the only power who could practise the prodigal barbarity of tying men to mouths of loaded cannon and blowing them away. It happens that general Burgoyne, who made the report of that horrid transaction, in the house of commons, is now a prisoner with us, and though an enemy, I can appeal to him for the truth of it, being confident that he neither can nor will deny it. Yet Clive received the approbation of the last parliament.

When we take a survey of mankind, we cannot help cursing the wretch, who, to the unavoidable misfortunes of nature, shall wilfully add the calamities of war. One would think there were evils enough in the world without studying to increase them, and that life is sufficiently short without shaking the sand that measures it. The histories of Alexander, and Charles of Sweden, are the histories of human devils; a good man cannot think of their actions without abhorrence, nor of their deaths without rejoicing. To see the bounties of heaven destroyed, the beautiful face of nature laid waste, and the choicest works of creation and art tumbled into ruin, would fetch a curse from the soul of piety itself. But in this country the aggravation is heightened by a new combination of affecting circumstances. America was young, and, compared with other countries, was virtuous. None but a Herod of uncommon malice would have made war upon infancy and innocence: and none but a people of the most finished fortitude, dared under those circumstances, have resisted the

tyranny. The natives, or their ancestors, had fled from the former oppressions of England, and with the industry of bees had changed a wilderness into a habitable world. To Britain they were indebted for nothing. The country was the gift of heaven, and God alone is their Lord and Sovereign.

The time, sir, will come when you, in a melancholy hour, shall reckon up your miseries by your murders in America. Life, with you, begins to wear a clouded aspect. The vision of pleasurable delusion is wearing away, and changing to the barren wild of age and sorrow. The poor reflection of having served your king will yield you no consolation in your parting moments. He will crumble to the same undistinguished ashes with yourself, and have sins enough of his own to answer for. It is not the farcical benedictions of a bishop, nor the cringing hypocrisy of a court of chaplains, nor the formality of an act of parliament, that can change guilt into innocence, or make the punishment one pang the less. You may, perhaps, be unwilling to be serious, but this destruction of the goods of Providence, this havoc of the human race, and this sowing the world with mischief, must be accounted for to him who made and governs it. To us they are only present sufferings, but to him they are deep rebellions.

If there is a sin superior to every other, it is that of wilful and offensive war. Most other sins are circumscribed within narrow limits, that is, the power of *one* man cannot give them a very general extension, and many kinds of sins have only a mental existence from which no infection arises; but he who is the author of a war, lets loose the whole contagion of hell, and opens a vein that bleeds a nation to death. We leave it to England and Indians to boast of these honors; we feel no thirst for such savage glory; a nobler flame, a purer spirit animates America. She has taken up the sword of virtuous defence; she has bravely put herself between Tyranny and Freedom, between a curse and a blessing, determined to expel the one and protect the other.

It is the object only of war that makes it honourable. And if there was ever a *just* war since the world began, it is this in which America is now engaged. She invaded no land of yours. She hired no mercenaries to burn your towns, nor Indians to massacre their inhabitants. She wanted nothing from you, and was indebted for nothing to you: and thus circumstanced, her defence is honourable and her prosperity is certain.

Yet it is not on the *justice* only, but likewise on the *importance* of this cause that I ground my seeming enthusiastical confidence of our success. The vast extension of America makes her of too much value in the scale

of Providence, to be cast like a pearl before swine, at the feet of an European island; and of much less consequence would it be that Britain were sunk in the sea than that America should miscarry. There has been such a chain of extraordinary events in the discovery of this country at first, in the peopling and planting it afterwards, in the rearing and nursing it to its present state, and in the protection of it through the present war, that no man can doubt, but Providence hath some nobler end to accomplish than the gratification of the petty elector of Hanover, or the ignorant and insignificant king of Britain.

As the blood of the martyrs hath been the seed of the Christian church, so the political persecutions of England will and have already enriched America with industry, experience, union, and importance. Before the present era she was a mere chaos of uncemented colonies, individually exposed to the ravages of the Indians and the invasion of any power that Britain should be at war with. She had nothing that she could call her own. Her felicity depended upon accident. The convulsions of Europe might have thrown her from one conquerer to another, till she had been the slave of all, and ruined by every one; for until she had spirit enough to become her own master, there was no knowing to which master she should belong. That period, thank God, is past, and she is no longer the dependant, disunited colonies of Britain, but the Independent and United States of America, knowing no master but heaven and herself. You, or your king, may call this "delusion," "rebellion," or what name you please. To us it is perfectly indifferent. The issue will determine the character, and time will give it a name as lasting as his own.

You have now, sir, tried the fate of three campaigns, and can fully declare to England, that nothing is to be got on your part, but blows and broken bones, and nothing on hers but waste of trade and credit, and an increase of poverty and taxes. You are now only where you might have been two years ago, without the loss of a single ship, and yet not a step more forward towards the conquest of the continent; because, as I have already hinted, "an army in a city can never be a conquering army." The full amount of your losses, since the beginning of the war, exceeds twenty thousand men, besides millions of treasure, for which you have nothing in exchange. Our expenses, though great, are circulated within ourselves. Yours is a direct sinking of money, and that from both ends at once; first, in hiring troops out of the nation, and in paying them afterwards, because the money in neither case can return to Britain. We are already in possession of the prize, you only

in pursuit of it. To us it is a real treasure, to you it would be only an empty triumph. Our expenses will repay themselves with tenfold interest, while yours entail upon you everlasting poverty.

Take a review, sir, of the ground which you have gone over, and let it teach you policy, if it cannot honesty. You stand but on a very tottering foundation. A change of the ministry in England may probably bring your measures into question, and your head to the block. Clive, with all his successes, had some difficulty in escaping, and yours being all a war of losses, will afford you less pretensions, and your enemies more grounds for impeachment.

Go home, sir, and endeavour to save the remains of your ruined country, by a just representation of the madness of her measures. A few moments, well applied, may yet preserve her from political destruction. I am not one of those who wish to see Europe in a flame, because I am persuaded that such an event will not shorten the war. The rupture, at present, is confined between the two powers of America and England. England finds that she cannot conquer America, and America has no wish to conquer England. You are fighting for what you can never obtain, and we defending what we never mean to part with. A few words, therefore, settle the bargain. Let England mind her own business and we will mind ours. Govern yourselves, and we will govern ourselves. You may then trade where you please unmolested by us, and we will trade where we please unmolested by you; and such articles as we can purchase of each other better than elsewhere may be mutually done. If it were possible that you could carry on the war for twenty years you must still come to this point at last, or worse, and the sooner you think of it the better it will be for you.

My official situation enables me to know the repeated insults which Britain is obliged to put up with from foreign powers, and the wretched shifts that she is driven to, to gloss them over. Her reduced strength and exhausted coffers in a three years' war with America, hath given a powerful superiority to France and Spain. She is not now a match for them. But if neither councils can prevail on her to think, nor sufferings awaken her to reason, she must e'en go on, till the honour of England becomes a proverb of contempt, and Europe dub her the Land of Fools.

I am, Sir, with every wish for an honourable peace,

Your friend, enemy, and countryman,

COMMON SENSE.

TO THE INHABITANTS OF AMERICA

WITH all the pleasure with which a man exchanges bad company for good, I take my leave of Sir William and return to you. It is now nearly three years since the tyranny of Britain received its first repulse by the arms of America. A period which has given birth to a new world, and erected a monument to the folly of the old.

I cannot help being sometimes surprised at the complimentary references which I have seen and heard made to ancient histories and transactions. The wisdom, civil governments, and sense of honor of the states of Greece and Rome, are frequently held up as objects of excellence and imitation. Mankind have lived to very little purpose, if, at this period of the world, they must go two or three thousand years back for lessons and examples. We do great injustice to ourselves by placing them in such a superior line. We have no just authority for it, neither can we tell why it is that we should suppose ourselves inferior.

Could the mist of antiquity be cleared away, and men and things be viewed as they really were, it is more than probable that they would admire us, rather than we them. America has surmounted a greater variety and combination of difficulties, than, I believe, ever fell to the share of any one people, in the same space of time, and has replenished the world with more useful knowledge and sounder maxims of civil government than were ever produced in any age before. Had it not been for America, there had been no such thing as freedom left throughout the whole universe. England hath lost hers in a long chain of right reasoning from wrong principles, and it is from this country, now, that she must learn the resolution to redress herself, and the wisdom how to accomplish it.

The Grecians and Romans were strongly possessed of the *spirit* of liberty but *not the principle*, for at the time that they were determined not to be slaves themselves, they employed their power to enslave the rest of mankind. But this distinguished era is blotted by no one misanthropical vice. In short, if the principle on which the cause is founded, the universal blessings that are to arise from it, the difficulties that accompanied it, the wisdom with which it has been debated, the fortitude by which it has been supported, the strength of the power which we had to oppose, and the condition in which we undertook it, be all taken in one view, we may justly style it the most virtuous and illustrious revolution that ever graced the history of mankind.

A good opinion of ourselves is exceedingly necessary in private life,

but absolutely necessary in public life, and of the utmost importance in supporting national character. I have no notion of yielding the palm of the United States to any Grecians or Romans that were ever born. We have equalled the bravest in times of danger, and excelled the wisest in construction of civil governments.

From this agreeable eminence let us take a review of present affairs. The spirit of corruption is so inseparably interwoven with British politics, that their ministry suppose all mankind are governed by the same motives. They have no idea of a people submitting even to temporary inconvenience from an attachment to rights and privileges. Their plans of business are calculated *by* the hour and *for* the hour, and are uniform in nothing but the corruption which gives them birth. They never had, neither have they at this time, any regular plan for the conquest of America by arms. They know not how to go about it, neither have they power to effect it if they did know. The thing is not within the compass of human practicability, for America is too extensive either to be fully conquered or *passively* defended. But she may be *actively* defended by defeating or making prisoners of the army that invades her. And this is the only system of defence that can be effectual in a large country.

There is something in a war carried on by invasion which makes it differ in circumstances from any other mode of war, because he who conducts it cannot tell whether the ground he gains be for him, or against him, when he first obtains it. In the winter of 1776, general Howe marched with an air of victory through the Jerseys, the consequence of which was his defeat; and general Burgoyne at Saratoga experienced the same fate from the same cause. The Spaniards, about two years ago, were defeated by the Algerines in the same manner, that is, their first triumphs became a trap in which they were totally routed. And whoever will attend to the circumstances and events of a war carried on by invasion, will find, that any invader, in order to be finally conquered must first begin to conquer.

I confess myself one of those who believe the loss of Philadelphia to be attended with more advantages than injuries. The case stood thus: The enemy imagined Philadelphia to be of more importance to us than it really was; for we all know that it had long ceased to be a port: not a cargo of goods had been brought into it for near a twelvemonth, nor any fixed manufactories, nor even ship-building, carried on in it; yet as the enemy believed the conquest of it to be practicable, and to that belief added the absurd idea that the soul of all America was centred there, and would be conquered there, it naturally follows that their

possession of it, by not answering the end proposed, must break up the plans they had so foolishly gone upon, and either oblige them to form a new one, for which their present strength is not sufficient, or to give over the attempt.

We never had so small an army to fight against, nor so fair an opportunity of final success as *now*. The death wound is already given. The day is ours if we follow it up. The enemy, by his situation, is within our reach, and by his reduced strength is within our power. The ministers of Britain may rage as they please, but our part is to conquer their armies. Let them wrangle and welcome, but let it not draw our attention from the *one* thing needful. *Here, in this spot* is our own business to be accomplished, our felicity secured. What we have now to do is as clear as light, and the way to do it is as straight as a line. It needs not to be commented upon, yet, in order to be perfectly understood I will put a case that cannot admit of a mistake.

Had the armies under generals Howe and Burgoyne been united, and taken post at Germantown, and had the northern army under general Gates been joined to that under general Washington, at Whitemarsh, the consequence would have been a general action; and if in that action we had killed and taken the same number of officers and men, that is, between nine and ten thousand, with the same quantity of artillery, arms, stores, etc. as have been taken at the northward, and obliged general Howe with the remains of his army, that is, with the same number he now commands, to take shelter in Philadelphia, we should certainly have thought ourselves the greatest heroes in the world; and should, as soon as the season permitted, have collected together all the force of the continent and laid siege to the city, for it requires a much greater force to besiege an enemy in a town than to defeat him in the field. The case *now* is just the same as if it had been produced by the means I have here supposed. Between nine and ten thousand have been killed and taken, all their stores are in our possession, and general Howe, in consequence of that victory, has thrown himself for shelter into Philadelphia. He, or his trifling friend Galloway, may form what pretences they please, yet no just reason can be given for their going into winter quarters so early as the 19th of October, but their apprehensions of a defeat if they continued out, or their conscious inability of keeping the field with safety. I see no advantage which can arise to America by hunting the enemy from state to state. It is a triumph without a prize, and wholly unworthy the attention of a people determined to conquer. Neither can any state promise itself security while the enemy remains

in a condition to transport themselves from one part of the continent to another. Howe, likewise, cannot conquer where we have no army to oppose, therefore any such removals in him are mean and cowardly, and reduces Britain to a common pilferer. If he retreats from Philadelphia, he will be despised; if he stays, he may be shut up and starved out, and the country, if he advances into it, may become his Saratoga. He has his choice of evils and we of opportunities. If he moves early, it is not only a sign but a proof that he expects no reinforcement, and his delay will prove that he either waits for the arrival of a plan to go upon, or force to execute it, or both; in *which* case our strength will increase more than his, therefore in *any* case we cannot be wrong if we do but proceed.

The particular condition of Pennsylvania deserves the attention of all the other states. Her military strength must not be estimated by the number of inhabitants. Here are men of all nations, characters, professions and interests. Here are the firmest whigs, surviving, like sparks in the ocean, unquenched and uncooled in the midst of discouragement and disaffection. Here are men losing their all with cheerfulness, and collecting fire and fortitude from the flames of their own estates. Here are others skulking in secret, many making a market of the times, and numbers who are changing to whig or tory with the circumstances of every day.

It is by mere dint of fortitude and perseverance that the whigs of this state have been able to maintain so good a countenance, and do even what they have done. We want help, and the sooner it can arrive the more effectual it will be. The invaded state, be it which it may, will always feel an additional burden upon its back, and be hard set to support its civil power with sufficient authority; and this difficulty will rise or fall, in proportion as the other states throw in their assistance to the common cause.

The enemy will most probably make many manœuvres at the opening of this campaign, to amuse and draw off the attention of the several states from the *one thing needful*. We may expect to hear of alarms and pretended expeditions to *this* place and *that* place, to the southward, the eastward, and the northward, all intended to prevent our forming into one formidable body. The less the enemy's strength is, the more subtleties of this kind will they make use of. Their existence depends upon it, because the force of America, when collected, is sufficient to swallow their present army up. It is therefore our business to make short work of it, by bending our whole attention to *this one principal point*, for the in-

stant that the main body under general Howe is defeated, all the inferior alarms throughout the continent, like so many shadows, will follow his downfall.

The only way to finish a war with the least possible bloodshed, or perhaps without any, is to collect an army, against the power of which the enemy shall have no chance. By not doing this, we prolong the war, and double both the calamities and expenses of it. What a rich and happy country would America be, were she, by a vigorous exertion, to reduce Howe as she has reduced Burgoyne. Her currency would rise to millions beyond its present value. Every man would be rich, and every man would have it in his power to be happy. And why not do these things? What is there to hinder? America is her own mistress and can do what she pleases.

If we had not at this time a man in the field, we could, nevertheless, raise an army in a few weeks sufficient to overwhelm all the force which general Howe at present commands. Vigor and determination will do any thing and every thing. We began the war with this kind of spirit, why not end it with the same? Here, gentlemen, is the enemy. Here is the army. The interest, the happiness of all America, is centred in this half ruined spot. Come and help us. Here are laurels, come and share them. Here are tories, come and help us to expel them. Here are whigs that will make you welcome, and enemies that dread your coming.

The worst of all policies is that of doing things by halves. Penny-wise and pound-foolish, has been the ruin of thousands. The present spring, if rightly improved, will free us from our troubles, and save us the expense of millions. We have now only one army to cope with. No opportunity can be fairer; no prospect more promising. I shall conclude this paper with a few outlines of a plan, either for filling up the battalions with expedition, or for raising an additional force, for any limited time, on any sudden emergency.

That in which every man is interested, is every man's duty to support. And any burden which falls equally on all men, and from which every man is to receive an equal benefit, is consistent with the most perfect ideas of liberty. I would wish to revive something of that virtuous ambition which first called America into the field. Then every man was eager to do his part, and perhaps the principal reason why we have in any degree fallen therefrom, is because we did not set a right value by it at first, but left it to blaze out of itself, instead of regulating and preserving it by just proportions of rest and service.

Suppose any state whose number of effective inhabitants was 80,000,

should be required to furnish 3,200 men towards the defence of the continent on any sudden emergency.

1st, Let the whole number of effective inhabitants be divided into hundreds; then if each of those hundreds turn out four men, the whole number of 3,200 will be had.

2d, Let the name of each hundred men be entered in a book, and let four dollars be collected from each man, with as much more as any of the gentlemen, whose abilities can afford it, shall please to throw in, which gifts likewise shall be entered against the names of the donors.

3d, Let the sums so collected be offered as a present, over and above the bounty of twenty dollars, to any four who may be inclined to propose themselves as volunteers: if more than four offer, the majority of the subscribers present shall determine which; if none offer, then four out of the hundred shall be taken by lot, who shall be entitled to the said sums, and shall either go, or provide others that will, in the space of six days.

4th, As it will always happen, that in the space of ground on which an hundred men shall live, there will be always a number of persons who, by age and infirmity, are incapable of doing personal service, and as such persons are generally possessed of the greatest part of property in any country, their portion of service, therefore, will be to furnish each man with a blanket, which will make a regimental coat, jacket, and breeches, or clothes in lieu thereof, and another for a watch cloak, and two pair of shoes; for however choice people may be of these things matters not in cases of this kind; those who live always in houses can find many ways to keep themselves warm, but it is a shame and a sin to suffer a soldier in the field to want a blanket while there is one in the country.

Should the clothing not be wanted, the superannuated or infirm persons possessing property, may, in lieu thereof, throw in their money subscriptions towards increasing the bounty; for though age will naturally exempt a person from personal service, it cannot exempt him from his share of the charge, because the men are raised for the defence of property and liberty jointly.

There never was a scheme against which objections might not be raised. But this alone is not a sufficient reason for rejection. The only line to judge truly upon, is, to draw out and admit all the objections which can fairly be made, and place against them all the contrary qualities, conveniences and advantages, then by striking a balance you come at the true character of any scheme, principle or position.

The most material advantages of the plan here proposed are, ease,

expedition, and cheapness; yet the men so raised get a much larger bounty than is any where at present given; because all the expenses, extravagance, and consequent idleness of recruiting are saved or prevented. The country incurs no new debt nor interest thereon; the whole matter being all settled at once and entirely done with. It is a subscription answering all the purposes of a tax, without either the charge or trouble of collecting. The men are ready for the field with the greatest possible expedition, because it becomes the duty of the inhabitants themselves, in every part of the country, to find their proportion of men instead of leaving it to a recruiting sergeant, who, be he ever so industrious, cannot know always where to apply.

I do not propose this as a regular digested plan, neither will the limits of this paper admit of any further remarks upon it. I believe it to be a hint capable of much improvement, and as such submit it to the public.

LANCASTER, March 21, 1778.

The Crisis

NUMBER IX

HAD America pursued her advantages with half the spirit that she resisted her misfortunes, she would, before now, have been a conquering and a peaceful people; but lulled in the lap of soft tranquillity, she rested on her hopes, and adversity only has convulsed her into action. Whether subtlety or sincerity at the close of the last year induced the enemy to an appearance for peace, is a point not material to know; it is sufficient that we see the effects it has had on our politics, and that we sternly rise to resent the delusion.

The war, on the part of America, has been a war of natural feelings. Brave in distress; serene in conquest; drowsy while at rest; and in every situation generously disposed to peace; a dangerous calm, and a most heightened zeal have, as circumstances varied, succeeded each other. Every passion but that of despair has been called to a tour of duty; and so mistaken has been the enemy, of our abilities and disposition, that when she supposed us conquered, we rose the conquerors. The extensiveness of the United States, and the variety of their resources; the universality of their cause, the quick operation of their feelings, and

the similarity of their sentiments, have, in every trying situation, produced a *something*, which, favored by providence, and pursued with ardor, has accomplished in an instant the business of a campaign. We have never deliberately sought victory, but snatched it; and bravely undone in an hour the blotted operations of a season.

The reported fate of Charleston, like the misfortunes of 1776, has at last called forth a spirit, and kindled up a flame, which perhaps no other event could have produced. If the enemy has circulated a falsehood, they have unwisely aggravated us into life, and if they have told us the truth, they have unintentionally done us a service. We were returning with folded arms from the fatigues of war, and thinking and sitting leisurely down to enjoy repose. The dependence that has been put upon Charleston threw a drowsiness over America. We looked on the business done—the conflict over—the matter settled—or that all which remained unfinished would follow of itself. In this state of dangerous relaxation, exposed to the poisonous infusions of the enemy, and having no common danger to attract our attention, we were extinguishing, by stages, the ardor we began with, and surrendering by piece-meals the virtue that defended us.

Afflicting as the loss of Charleston may be, yet if it universally rouse us from the slumber of twelve months past, and renew in us the spirit of former days, it will produce an advantage more important than its loss. America ever *is* what she *thinks* herself to be. Governed by sentiment, and acting her own mind, she becomes, as she pleases, the victor or the victim.

It is not the conquest of towns, nor the accidental capture of garri-sons, that can reduce a country so extensive as this. The sufferings of one part can never be relieved by the exertions of another, and there is no situation the enemy can be placed in that does not afford to us the same advantages which he seeks himself. By dividing his force, he leaves every post attackable. It is a mode of war that carries with it a confession of weakness, and goes on the principle of distress rather than conquest.

The decline of the enemy is visible, not only in their operations, but in their plans; Charleston originally made but a secondary object in the system of attack, and it is now become their principal one, because they have not been able to succeed elsewhere. It would have carried a cowardly appearance in Europe had they formed their grand expedition, in 1776, against a part of the continent where there was no army, or not a sufficient one to oppose them; but failing year after year in their im-

pressions here, and to the eastward and northward, they deserted their capital design, and prudently contenting themselves with what they can get, give a flourish of honor to conceal disgrace.

But this piece-meal work is not conquering the continent. It is a discredit in them to attempt it, and in us to suffer it. It is now full time to put an end to a war of aggravations, which, on one side, has no possible object, and on the other has every inducement which honor, interest, safety and happiness can inspire. If we suffer them much longer to remain among us, we shall become as bad as themselves. An association of vice will reduce us more than the sword. A nation hardened in the practice of iniquity knows better how to profit by it, than a young country newly corrupted. We are not a match for them in the line of advantageous guilt, nor they for us on the principles which we bravely set out with. Our first days were our days of honour. They have marked the character of America wherever the story of her wars are told; and convinced of this, we have nothing to do but wisely and unitedly to tread the well known track. The progress of a war is often as ruinous to individuals, as the issue of it is to a nation; and it is not only necessary that our forces be such that we be conquerors in the end, but that by timely exertions we be secure in the interim. The present campaign will afford an opportunity which has never presented itself before, and the preparations for it are equally necessary, whether Charleston stand or fall. Suppose the first, it is in that case only a failure of the enemy, not a defeat. All the conquest that a besieged town can hope for, is, not to be conquered; and compelling an enemy to raise the siege, is to the besieged a victory. But there must be a probability amounting almost to a certainty, that would justify a garrison marching out to attack a retreat. Therefore should Charleston not be taken, and the enemy abandon the siege, every other part of the continent should prepare to meet them; and, on the contrary, should it be taken, the same preparations are necessary to balance the loss, and put ourselves in a position to co-operate with our allies, immediately on their arrival.

We are not now fighting our battles alone, as we were in 1776; England, from a malicious disposition to America, has not only not declared war against France and Spain, but, the better to prosecute her passions here, has afforded those powers no military object, and avoids them, to distress us. She will suffer her West India islands to be overrun by France, and her southern settlements to be taken by Spain, rather than quit the object that gratifies her revenge. This conduct, on the part of Britain, has pointed out the propriety of France sending a naval and

land force to co-operate with America on the spot. Their arrival cannot be very distant, nor the ravages of the enemy long. The recruiting the army, and procuring the supplies, are the two things most necessary to be accomplished, and a capture of either of the enemy's divisions will restore to America peace and plenty.

At a crisis, big, like the present, with expectation and events, the whole country is called to unanimity and exertion. Not an ability ought now to sleep, that can produce but a mite to the general good, nor even a whisper to pass that militates against it. The necessity of the case, and the importance of the consequences, admit no delay from a friend, no apology from an enemy. To spare now, would be the height of extravagance, and to consult present ease, would be to sacrifice it perhaps forever.

America, rich in patriotism and produce, can want neither men nor supplies, when a serious necessity calls them forth. The slow operation of taxes, owing to the extensiveness of collection, and their depreciated value before they arrived in the treasury, have, in many instances, thrown a burden upon government, which has been artfully interpreted by the enemy into a general decline throughout the country. Yet this, inconvenient as it may at first appear, is not only remediable, but may be turned to an immediate advantage; for it makes no real difference, whether a certain number of men, or company of militia (and in this country every man is a militia-man), are directed by law to send a recruit at their own expense, or whether a tax is laid on them for that purpose, and the man hired by government afterwards. The first, if there is any difference, is both cheapest and best, because it saves the expense which would attend collecting it as a tax, and brings the man sooner into the field than the modes of recruiting formerly used; and, on this principle, a law has been passed in this state, for recruiting two men from each company of militia, which will add upwards of a thousand to the force of the country.

But the flame which has broke forth in this city since the report from New-York, of the loss of Charleston, not only does honor to the place, but, like the blaze of 1776, will kindle into action the scattered sparks throughout America. The valor of a country may be learned by the bravery of its soldiery, and the general cast of its inhabitants, but confidence of success is best discovered by the active measures pursued by men of property; and when the spirit of enterprise becomes so universal as to act at once on all ranks of men, a war may then, and not till then, be styled truly popular.

In 1776, the ardor of the enterprising part was considerably checked by the real revolt of some, and the coolness of others. But in the present case, there is a firmness in the substance and property of the country to the public cause. An association has been entered into by the merchants, tradesmen, and principal inhabitants of the city [Philadelphia], to receive and support the new state money at the value of gold and silver; a measure which, while it does them honor, will likewise contribute to their interest, by rendering the operations of the campaign convenient and effectual.

Nor has the spirit of exertion stopped here. A voluntary subscription is likewise begun, to raise a fund of hard money, to be given as bounties, to fill up the full quota of the Pennsylvania line. It has been the remark of the enemy, that every thing in America has been done by the force of government; but when she sees individuals throwing in their voluntary aid, and facilitating the public measures in concert with the established powers of the country, it will convince her that the cause of America stands not on the will of a few but on the broad foundation of property and popularity.

Thus aided and thus supported, disaffection will decline, and the withered head of tyranny expire in America. The ravages of the enemy will be short and limited, and like all their former ones, will produce a victory over themselves.

COMMON SENSE.

PHILADELPHIA, June 9, 1780.

At the time of writing this number of the Crisis, the loss of Charleston, though believed by some, was more confidently disbelieved by others. But there ought to be no longer a doubt upon the matter. Charleston is gone, and I believe for the want of a sufficient supply of provisions. The man that does not now feel for the honor of the best and noblest cause that ever a country engaged in, and exert himself accordingly, is no longer worthy of a peaceable residence among a people determined to be free.

C. S.

The Last Crisis

NUMBER XV

"THE times that tried men's souls," are over—and the greatest and completest revolution the world over knew, gloriously and happily accomplished.

But to pass from the extremes of danger to safety—from the tumult of war to the tranquillity of peace, though sweet in contemplation, requires a gradual composure of the senses to receive it. Even calmness has the power of stunning, when it opens too instantly upon us. The long and raging hurricane that should cease in a moment, would leave us in a state rather of wonder than enjoyment; and some moments of recollection must pass, before we could be capable of tasting the felicity of repose. There are but few instances in which the mind is fitted for sudden transitions: it takes in its pleasures by reflection and comparison, and those must have time to act, before the relish for new scenes is complete.

In the present case the mighty magnitude of the object—the various uncertainties of fate it has undergone—the numerous and complicated dangers we have suffered or escaped—the eminence we now stand on, and the vast prospect before us, must all conspire to impress us with contemplation.

To see it in our power to make a world happy—to teach mankind the art of being so—to exhibit, on the theatre of the universe, a character hitherto unknown—and to have, as it were, a new creation intrusted to our hands, are honors that command reflection, and can neither be too highly estimated, nor too gratefully received.

In this pause then of recollection—while the storm is ceasing, and the long-agitated mind vibrating to a rest, let us look back on the scenes we have passed, and learn from experience what is yet to be done.

Never, I say, had a country so many openings to happiness as this. Her setting out in life, like the rising of a fair morning, was unclouded and promising. Her cause was good. Her principles just and liberal. Her temper serene and firm. Her conduct regulated by the nicest steps, and everything about her wore the mark of honor. It is not every country (perhaps there is not another in the world) that can boast so fair an origin. Even the first settlement of America corresponds with the character of the revolution. Rome, once the proud mistress of the universe, was originally a band of ruffians. Plunder and rapine made her rich, and her oppression

of millions made her great. But America need never be ashamed to tell her birth, nor relate the stages by which she rose to empire.

The remembrance, then, of what is past, if it operates rightly, must inspire her with the most laudable of an ambition, that of adding to the fair fame she began with. The world has seen her great in adversity. Struggling without a thought of yielding, beneath accumulated difficulties. Bravely, nay proudly, encountering distress, and rising in resolution as the storm increased. All this is justly due to her for her fortitude has merited the character. Let then, the world see that she can bear prosperity: and that her honest virtue in time of peace, is equal to the bravest virtue in time of war.

She is now descending to the scenes of quiet and domestic life. Not beneath the cypress shade of disappointment, but to enjoy in her own land and under her own vine, the sweet of her labors, and the reward of her toil.—In this situation, may she never forget that a fair national reputation is of as much importance as independence. That it possesses a charm that wins upon the world, and makes even enemies civil.—That it gives a dignity which is often superior to power, and commands reverence where pomp and splendor fail.

It would be a circumstance ever to be lamented and never to be forgotten, were a single blot, from any cause whatever, suffered to fall on a revolution, which to the end of time must be an honor to the age that accomplished it: and which has contributed more to enlighten the world, and diffuse a spirit of freedom and liberality among mankind, than any human event (if this may be called one) that ever preceded it.

It is not among the least of the calamities of a long-continued war that it unhinges the mind from those nice sensations which at other times appear so amiable. The continued spectacle of woe blunts the finer feelings, and the necessity of bearing with the sight, renders it familiar. In like manner, are many of the moral obligations of society weakened, till the custom of acting by necessity becomes an apology, where it is truly a crime. Yet let but a nation conceive rightly of its character, and it will be chastely just in protecting it. None never began with a fairer than America, and none can be under a greater obligation to preserve it.

The debt which America has contracted, compared with the cause she has gained, and the advantages to flow from it, ought scarcely to be mentioned. She has it in her choice to do, and to live as happy as she pleases. The world is in her hands. She has no foreign power to monopolize her commerce, perplex her legislation, or control her prosperity. The struggle is over, which must one day have happened, and, perhaps, never

could have happened at a better time. And instead of a domineering master, she has gained an *ally*, whose exemplary greatness, and universal liberality, have extorted a confession even from her enemies.

With the blessings of peace, independence, and an universal commerce, the states, individually and collectively, will have leisure and opportunity to regulate and establish their domestic concerns, and to put it beyond the power of calumny to throw the least reflection on their honor. Character is much easier kept than recovered, and that man, if any such there be, who, from sinister views, or littleness of soul, lends unseen his hand to injure it, contrives a wound it will never be in his power to heal.

As we have established an inheritance for posterity, let that inheritance descend with every mark of an honorable conveyance. The little it will cost, compared with the worth of the states, the greatness of the object, and the value of national character, will be a profitable exchange.

But that which must more forcibly strike a thoughtful penetrating mind, and which includes and renders easy all inferior concerns, is the *Union of the States*. On this our great national character depends. It is this which must give us importance abroad and security at home. It is through this only, that we are or can be nationally known in the world; it is the flag of the United States which renders our ships and commerce safe on the seas, or in a foreign port. Our Mediterranean passes must be obtained under the same style. All our treaties, whether of alliance, peace or commerce, are formed under the sovereignty of the United States, and Europe knows us by no other name or title.

The division of the empire into states is for our own convenience, but abroad this distinction ceases. The affairs of each state are local. They can go no further than to itself. And were the whole worth of even the richest of them expended in revenue, it would not be sufficient to support sovereignty against a foreign attack. In short, we have no other national sovereignty than as United States. It would even be fatal for us if we had—too expensive to be maintained, and impossible to be supported. Individuals, or individual states, may call themselves what they please; but the world, and especially the world of enemies, is not to be held in awe by the whistling of a name. Sovereignty must have power to protect all the parts that compose and constitute it; and as UNITED STATES we are equal to the importance of the title, but otherwise we are not. Our union, well and wisely regulated and cemented, is the cheapest way of being great—the easiest way of being powerful, and the happiest invention in government which the circumstances of America can admit

of. Because it collects from each state, that which, by being inadequate, can be of no use to it, and forms an aggregate that serves for all.

The states of Holland are an unfortunate instance of the effects of individual sovereignty. Their disjointed condition exposes them to numerous intrigues, losses, calamities and enemies; and the almost impossibility of bringing their measures to a decision, and that decision into execution, is to them, and would be to us, a source of endless misfortune.

It is with confederated states as with individuals in society; something must be yielded up to make the whole secure. In this view of things we gain by what we give, and draw an annual interest greater than the capital.—I ever feel myself hurt when I hear the union, that great palladium of our liberty and safety, the least irreverently spoken of. It is the most sacred thing in the constitution of America, and that which every man should be most proud and tender of. Our citizenship in the United States is our national character. Our citizenship in any particular state is only our local distinction. By the latter we are known at home, by the former to the world. Our great title is AMERICANS—our inferior one varies with the place.

So far as my endeavors could go, they have all been directed to conciliate the affections, unite the interests, and draw and keep the mind of the country together; and the better to assist in this foundation work of the revolution, I have avoided all places of profit or office, either in the state I live in, or in the United States; kept myself at a distance from all parties and party connexions, and even disregarded all private and inferior concerns: and when we take into view the great work which we have gone through, and feel, as we ought to feel, the just importance of it, we shall then see, that the little wranglings and indecent contentions of personal parley, are as dishonorable to our characters as they are injurious to our repose.

It was the cause of America that made me an author. The force with which it struck my mind, and the dangerous condition the country appeared to me in, by courting an impossible and an unnatural reconciliation with those who were determined to reduce her, instead of striking out into the only line that could cement and save her, A DECLARATION OF INDEPENDENCE, made it impossible for me, feeling as I did, to be silent: and if, in the course of more than seven years, I have rendered her any service, I have likewise added something to the reputation of literature, by freely and disinterestedly employing it in the great cause of mankind, and showing that there may be genius without prostitution.

Independence always appeared to me practicable and probable; provided the sentiment of the country could be formed and held to the object: and there is no instance in the world, where a people so extended, and wedded to former habits of thinking, and under such a variety of circumstances, were so instantly and effectually pervaded by a turn in politics, as in the case of independence, and who supported their opinion, undiminished, through such a succession of good and ill fortune, till they crowned it with success.

But as the scenes of war are closed, and every man preparing for home and happier times, I therefore take my leave of the subject. I have most sincerely followed it from beginning to end, and through all its turns and windings, and whatever country I may hereafter be in, I shall always feel an honest pride at the part I have taken and acted, and a gratitude to nature and providence for putting it in my power to be of some use to mankind.

COMMON SENSE.

PHILADELPHIA, April 19th, 1783

☆ ☆ ☆

In the last of his *Crisis Papers*, Paine evaluates both America and his own work. To those who thoughtfully desire to understand the man who was Thomas Paine, I recommend a re-reading of the last *Crisis*. Here, for example, is his summing up:

"So far as my endeavors could go, they have all been directed to conciliate the affections, unite the interests, and draw and keep the mind of the country together; and the better to assist in this foundation work of the revolution, I have avoided all places of profit or office, either in the state I live in or in the United States; kept myself at a distance from all parties and party connexions, and even disregarded all private and inferior concerns."

Was there ever a clearer, wiser, or better balanced statement by a propagandist conscious of his own role in a time of crisis? This is an answer to those who regard Paine as a mystic; no mystic could so hard-headedly evaluate the need of a people fighting for their national liberation.

Also, this last *Crisis* is an answer to those who claim Paine was not completely conscious of his role in America. This is a completely conscious evaluation. All through the seven years, Paine worked as

an objective revolutionist; he built, block by block. Even his slogans for unity were artfully and consciously constructed; witness that he starts the last *Crisis* with the slogan he had popularized seven years before. There, too, is an indication of the widespread popularity Paine's slogans must have gained.

In all, between 1776 and 1783, Paine wrote fifteen *Crisis* Papers, the five most pertinent of which are here included. Properly, the series finished with the one here indicated as the last—although nine months after the end of the Revolution, Paine wrote what some call the *Sixteenth Crisis*, a fierce and acute indictment of a colonial policy that would resist change with its last ounce of strength.

Paine, like Rush and certain other patriots, now sensed that the Revolution was not, as so many boasted and as he himself had written, finished—that certain battles still had to be fought. And, of course, that came about in the second war for national liberation which took place in 1812–1814.

Here, then, is his interesting though anticlimactic, warning to Americans:

A Warning

TO THE PEOPLE OF AMERICA

IN "Rivington's New York Gazette," of December 6th, is a publication, under the appearance of a letter from London, dated September 30th; and is on a subject which demands the attention of the United States.

The public will remember that a treaty of commerce between the United States and England was set on foot last spring, and that until the said treaty could be completed, a bill was brought into the British parliament by the then chancellor of the exchequer, Mr. Pitt, to admit and legalize (as the case then required) the commerce of the United States into the British ports and dominions. But neither the one nor the other has been completed. The commercial treaty is either broken off or remains as it began; and the bill in parliament has been thrown aside. And in lieu thereof a selfish system of English politics has started up,

calculated to fetter the commerce of America, by engrossing to England the carrying trade of the American produce to the West India islands.

Among the advocates for this last measure is Lord Sheffield, a member of the British parliament, who has published a pamphlet entitled "Observations on the Commerce of the American States." The pamphlet has two objects; the one is to allure the Americans to purchase British manufactures; and the other to spirit up the British Parliament to prohibit the citizens of the United States from trading to the West India islands.

Viewed in this light, the pamphlet, though in some parts dexterously written, is an absurdity. It offends in the very act of endeavoring to ingratiate; and his lordship, as a politician, ought not to have suffered the two objects to have appeared together. The letter alluded to, contains extracts from the pamphlet, with high encomiums on Lord Sheffield, for laboriously endeavoring (as the letter styles it) "to show the mighty advantages of retaining the carrying trade."

Since the publication of this pamphlet in England, the commerce of the United States to the West Indies, in American vessels, has been prohibited; and all intercourse, except in British bottoms, the property of, and navigated by British subjects, cut off.

That a country has a right to be as foolish as it pleases, has been proved by the practice of England for many years past: in her island situation, sequestered from the world, she forgets that her whispers are heard by other nations; and in her plans of politics and commerce, she seems not to know, that other votes are necessary besides her own. America would be equally as foolish as Britain, were she to suffer so great a degradation on her flag, and such a stroke on the freedom of her commerce, to pass without a balance.

We admit the right of any nation to prohibit the commerce of another into its own dominions, where there are no treaties to the contrary; but as this right belongs to one side as well as the other, there is always a way left to bring avarice and insolence to reason.

But the ground of security which Lord Sheffield has chosen to erect his policy upon, is of a nature which ought, and I think must, awaken, in every American, a just and strong sense of national dignity. Lord Sheffield appears to be sensible, that in advising the British nation and parliament to engross to themselves so great a part of the carrying trade of America, he is attempting a measure which cannot succeed, if the politics of the United States be properly directed to counteract the assumption.

But, says he, in his pamphlet, "It will be a long time before the

American states can be brought to act as a nation, neither are they to be feared as such by us."

What is this more or less than to tell us, that while we have no national system of commerce, the British will govern our trade by their own laws and proclamations as they please. The quotation disclose a truth too serious to be overlooked, and too mischievous not to be remedied.

Among other circumstances which led them to this discovery, none could operate so effectually as the injudicious, uncandid and indecent opposition made by sundry persons in a certain state, to the recommendations of congress last winter, for an import duty of five per cent. It could not but explain to the British a weakness in the national power of America, and encourage them to attempt restrictions on her trade, which otherwise they would not have dared to hazard. Neither is there any state in the union, whose policy was more misdirected to its interest than the state I allude to, because her principal support is the carrying trade, which Britain, induced by the want of a well-centred power in the United States to protect and secure, is now attempting to take away. It fortunately happened (and to no state in the union more than the state in question) that the terms of peace were agreed on before the opposition appeared, otherwise, there cannot be a doubt, that if the same idea of the diminished authority of America had occurred to them at that time as has occurred to them since, but they would have made the same grasp at the fisheries, as they have done at the carrying trade.

It is surprising that an authority which can be supported with so much ease, and so little expense, and capable of such extensive advantages to the country should be cavilled at by those whose duty it is to watch over it, and whose existence as a people depends upon it. But this, perhaps, will ever be the case, till some misfortune awakens us into reason, and the instance now before us is but a gentle beginning of what America must expect, unless she guards her union with nicer care and stricter honor. United, she is formidable, and that with the least possible charge a nation can be so: separated, she is a medley of individual nothings, subject to the sport of foreign nations.

It is very probable that the ingenuity of commerce may have found out a method to evade and supersede the intentions of the British, in interdicting the trade with the West India islands. The language of both being the same, and their customs well understood, the vessels of one country may, by deception, pass for those of another. But this would be a practice too debasing for a sovereign people to stoop to, and too profligate not to be discountenanced. An illicit trade, under any shape it can

be placed, cannot be carried on without a violation of truth. America is now sovereign and independent, and ought to conduct her affairs in a regular style of character. She has the same right to say that no British vessel shall enter her ports, or that no British manufactures shall be imported, but in American bottoms, the property of, and navigated by American subjects, as Britain has to say the same thing respecting the West Indies. Or she may lay a duty of ten, fifteen, or twenty shillings per ton (exclusive of other duties) on every British vessel coming from any port of the West Indies, where she is not permitted to trade, the said tonnage to continue as long on her side as the prohibition continues on the other.

But it is only by acting in union, that the usurpations of foreign nations on the freedom of trade can be counteracted, and security extended to the commerce of America. And when we view a flag, which to the eye is beautiful, and to contemplate its rise and origin inspires a sensation of sublime delight, our national honor must unite with our interest to prevent injury to the one, or insult to the other.

COMMON SENSE.

NEW YORK, *December 9, 1783.*

✱ ✱ ✱

From the first to the last paper, you have noted the political growth of Paine; he has matured both in his understanding of history and of his personal relationship to the world; he is humbly grateful that he has been allowed to participate in this wonderful drama of freedom, and he is superbly confident of mankind. His love of people has been confirmed, and the one-time outcast has found more good comrades than he can number. It is interesting to speculate on what Paine's role and future would have been had he stayed in America and become an American. Would he have become one of the great democratic leaders, along with Jefferson and Madison? Would he have been enshrined instead of hated? Would he have started a free press around which the democratic movement could have rallied? No one knows, and of course the speculation, while interesting, is fruitless. Paine was an Englishman; he remained one; his interest was not national, but international; and his belief in change, once confirmed, passed beyond the bounds of realism.

In one sense, the American Revolution was the most orderly in history. It finished clean, and although the fruits of the revolution were not fully realized until the administration of Madison, it seemed to Paine, in 1783, that the curtain had come down once and for all on the great drama. For the moment he was a man without employment. The spoils were spread, and he was invited to help himself generously.

When the revolution was over, Paine was forty-six years old and a person of consequence—both in America and in England. There was curiously little ill feeling against Americans in England when the war was done, and American patriots were welcomed and feted in the British Isles.

Much of this was due to the fact that the British masses had been against the war, and that most of the government had felt it was a stupid, even insane venture. Benjamin Franklin, who had lived in England for a decade before the war, was almost as admired there as in his homeland. This situation made Paine look forward to a return to England, but first he had a taste of comfort and victory in America. Congress was generous to him then, although not so generous as to others; he received some money and some land. The flame of revolt went out of him. Letters and science were the pursuits of an American gentleman of the time, and Paine, for all his diatribes against aristocracy could make his compromise with such aristocrats as Jefferson and Washington. He devised an iron bridge; he experimented; he wrote—pale, lifeless writing that traveled nowhere. He attended dinner parties and was a guest at many of the fine Georgian houses of the time.

Had the fiery belief in change gone out of him? Was the salvation of three million souls in America enough? What of the rest of the world, where mankind still groaned in bondage. He had finished his last *Crisis* with a prayer of gratitude that he had been of some use to mankind, not only to America. Was he to leave it there?

Thomas Paine, gentleman, became as restless and as angry as Thomas Paine, staymaker. Not quickly; but the cycle began again when he went to France in 1787, and then to England the following year.

❧ THREE ❧

Rights of Man

WELCOMED and honored in England, he even went to see the squire at Thetford; he consorted with the great—Romney, the painter; Blake, the poet; Burke, the statesman and one-time friend of America. He met lords and ladies, dukes and duchesses, all the people who were worth knowing. He was building his iron bridge in England, and it would make him famous. And sometimes, he even ventured into the abyss where the people lived; he considered things then, what these people might do if they awoke, determined, united, with guns in their hands. Such thoughts disturbed him, yet he could not shake them off; they coupled with the realization that now he wrote nothing worthwhile.

And then, from across the channel, came the smoke of a flame with which he was well familiar—revolution. We can imagine that it drew him like a loadstone. He was in France in 1789, the year the Bastille fell, and when Lafayette gave him the key to that monstrous old fortress, a key of liberty to unlock all doors, to present to George Washington, the sequestered and reasonable Paine who had existed for six years disappeared, and the old apostle of change returned.

The next two years of Paine's life are the least known as well as the least understood. We will never know how deeply he was concerned with the abortive working-class revolution that was growing in England and then was smashed in the bud. That he met and plotted, we do know; we know that arms were cached, and an equivalent of the New England minutemen formed. We know that men were quietly sentenced to death for their part in that plot. We know

that Paine might well have been sentenced to death too, had he not fled England two steps ahead of the Crown's agents. And we know that he wrote a book called *Rights of Man* which shook England almost as much as *Common Sense* shook America.

It is one of history's curiosities that the volume, written by the foremost British statesman of the day, and to which *Rights of Man* was an answer, should be so nearly forgotten, while Paine's book has become a classic. After the opening phase of the French Revolution, Edmund Burke, the one-time friend of progress, wrote a scathing denunciation of the people's movement in France. He called this work *Reflections on the Revolution in France*, but it was as one-sided, as narrow, and as reactionary a set of reflections as ever a so-called liberal set down. He whitewashed the decadent French aristocracy and elevated them; he turned the people into a savage, frothing mob, the same heartless mob that Charles Dickens borrowed from Carlyle and in turn passed on to the Hollywood movie makers. Burke set a precedent in conscious, manufactured falsehood and calumny of a people's movement that has been dutifully followed even to this day.

It was this wretched piece of writing, happily forgotten today, that woke Tom Paine from his scribbling and set him to writing *Rights of Man*, one of the finest statements of eighteenth century democratic philosophy ever formulated.

When Paine wrote *Common Sense*, he was venturing into a new field. Not by the farthest stretch of imagination, as I have said, could he have imagined the consequences of his first published work. But settling down to *Rights of Man*, he had hindsight to aid him, and he proceeded deliberately to manufacture a document that would shake the whole fabric of England. It did.

It was a miracle that Paine should have succeeded twice in creating so influential a document; it would have been something more of a miracle if his second book touched off a revolution in a land so different from America.

The difference lay in the stages of development of the two countries; the psychology of the masses was different. The America to which Paine came had a revolutionary government, the Continental Congress, and this congress had already assumed many functions

of the state. The British government was conservative, stable, and fully conscious of whatever revolutionary threat existed.

Paine finally found a courageous printer for his book. Aware of its content, the government allowed it to be printed with the belief that only the upper classes could afford to buy it. In that, however, they were mistaken. *Rights of Man* met with a response that was unique in English publishing history. The poor pooled pennies and dug into meagre savings to buy the book. Like an underground manifesto, it was passed from hand to hand, even when it became a crime to be found with *Rights of Man* in one's possession. It was published in two parts, each tremendously successful; but when we attempt to estimate the numbers of copies sold, we run into the same difficulties we encountered with *Common Sense*. I would guess that the expensive edition sold close to 100,000 copies. Cheap editions were gotten out in Scotland and Wales; extracts from the book were printed in pamphlet form.

The book became a bible to thousands of men who dreamed of a free England. In case after case in that period, when men were being tried for treason or for what was called treason by the British Crown, we find offered as damning evidence to the jury the fact that these men possessed a copy of *Rights of Man*.

Of Jordan, the man who published *Rights of Man* and stood by it when the government charged that it was seditious, too little is known. He must have been a brave and forthright man, one of the many Englishmen who believed in the things Paine said and loved him for what he was. He answered the government's charges, allowing Paine to escape to France. Undoubtedly, Paine hoped to return, to find the English populace ready and waiting; but he never returned; when he left England in 1792, he left it forever.

And the pitiful, abortive little revolution that Paine had brewed in England fell to pieces. Three generations would pass before even a small part of the things Paine pleaded for in his book came to that tight little isle.

Yet one cannot say that the book had no effect. It shook the government; it set thousands of people to thinking. It stirred the currents in what had been placid water, and once stirred, those currents never stilled themselves. And not only in England, but

everywhere men longed for freedom, *Rights of Man* became an inspiration and a hope.

Just a word should be said about the fact that part one of *Rights of Man* was dedicated to George Washington. This dedication takes on added interest in light of the circumstance that years later Paine wrote a letter damning Washington in the strongest terms he knew. Note that here Paine gives ample evidence of the love and consideration in which he held the American President, and indeed there was no man on earth Paine considered more highly. Only when, after many years, separated from America by thousands of miles, Paine saw the rise of the party of reaction and the beginnings of the Federalist plot, did his esteem begin to waiver. And he finally lost faith when, in his hour of direst need, the American government abandoned him. Of that, more later.

So here is *Rights of Man*, a book which for more than a century and a half has pointed out paths in democratic government, and which even today would be considered radical by many.

Rights of Man

TO

GEORGE WASHINGTON

PRESIDENT OF THE UNITED STATES OF AMERICA

SIR,

I present you a small Treatise in defence of those Principles of Freedom which your exemplary Virtue hath so eminently contributed to establish. That the Rights of Man may become as universal as your Benevolence can wish, and that you may enjoy the Happiness of seeing the New World regenerate the Old, is the prayer of

Sir,

Your much obliged, and
Obedient humble Servant,

THOMAS PAINE.

PART THE FIRST

AMONG the incivilities by which nations or individuals provoke and irritate each other, Mr. Burke's pamphlet on the French Revolution is an extraordinary instance. Neither the people of France, nor the National Assembly, were troubling themselves about the affairs of England; or the English Parliament; and why Mr. Burke should commence an unprovoked attack upon them, both in Parliament and in public, is a conduct that cannot be pardoned on the score of manners, nor justified on that of policy.

There is scarcely an epithet of abuse to be found in the English language, with which Mr. Burke has not loaded the French Nation and the National Assembly. Everything which rancour, prejudice, ignorance or knowledge could suggest, is poured forth in the copious fury of near four hundred pages. In the strain and on the plan Mr. Burke was writing, he might have written on to as many thousands. When the tongue or the pen is let loose in a phrenzy of passion, it is the man, and not the subject, that becomes exhausted.

Hitherto Mr. Burke has been mistaken and disappointed in the opinions he had formed of the affairs of France; but such is the ingenuity of his hope, or the malignancy of his despair, that it furnishes him with new pretences to go on. There was a time when it was impossible to make Mr. Burke believe there would be any Revolution in France. His opinion then was, that the French had neither spirit to undertake it nor fortitude to support it; and now that there is one, he seeks an escape by condemning it.

Not sufficiently content with abusing the National Assembly, a great part of his work is taken up with abusing Dr. Price (one of the best-hearted men that lives) and the two societies in England known by the name of the Revolution Society and the Society for Constitutional Information.

Dr. Price had preached a sermon on the 4th of November, 1789, being the anniversary of what is called in England the Revolution, which took place 1688. Mr. Burke, speaking of this sermon, says, "The political Divine proceeds dogmatically to assert, that by the principles of the Revolution, the people of England have acquired three fundamental rights:

1. To choose their own governors.
2. To cashier them for misconduct.
3. To frame a government for ourselves."

Dr. Price does not say that the right to do these things exists in this or in that person, or in this or in that description of persons, but that it exists in the *whole*; that it is a right resident in the Nation. Mr. Burke, on the contrary, denies that such a right exists in the Nation, either in whole or in part, or that it exists anywhere; and, what is still more strange and marvellous, he says, "that the people of England utterly disclaim such a right, and that they will resist the practical assertion of it with their lives and fortunes." That men should take up arms and spend their lives and fortunes, *not* to maintain their rights, but to maintain they have *not* rights, is an entirely new species of discovery, and suited to the paradoxical genius of Mr. Burke.

The method which Mr. Burke takes to prove that the people of England have no such rights, and that such rights do not now exist in the Nation, either in whole or in part, or anywhere at all, is of the same marvellous and monstrous kind with what he has already said; for his arguments are that the persons, or the generation of persons, in whom they did exist, are dead, and with them the right is dead also. To prove this, he quotes a declaration made by parliament about a hundred years ago, to William and Mary, in these words: "The Lords Spiritual and Temporal, and Commons, do, in the name of the people aforesaid [meaning the people of England then living], most humbly and faithfully *submit* themselves, their *heirs* and *posterities*, for EVER." He also quotes a clause of another act of Parliament made in the same reign, the terms of which, he says, "bind us [meaning the people of that day], our *heirs* and our *posterity*, to *them*, their *heirs* and *posterity*, to the end of time."

Mr. Burke conceives his point sufficiently established by producing those clauses, which he enforces by saying that they exclude the right of the Nation for *ever*. And not yet content with making such declarations, repeated over and over again, he farther says, "that if the people of England possessed such a right before the Revolution [which he acknowledges to have been the case, not only in England, but throughout Europe, at an early period], yet that the *English Nation* did, at the time of the Revolution, most solemnly renounce and abdicate it, for themselves, and for *all their posterity, for ever*."

As Mr. Burke occasionally applies the poison drawn from his horrid principles (if it is not prophanation to call them by the name of principles) not only to the English Nation, but to the French Revolution and the National Assembly, and charges that august, illuminated and illuminating body of men with the epithet of *usurpers*, I shall, *sans cérémonie*, place another system of principles in opposition to his.

The English Parliament of 1688 did a certain thing, which, for themselves and their constituents, they had a right to do, and which it appeared right should be done: but, in addition to this right, which they possessed by delegation, *they set up another right by assumption*, that of binding and controuling posterity to the end of time. The case, therefore, divides itself into two parts; the right which they possessed by delegation, and the right which they set up by assumption. The first is admitted; but with respect to the second, I reply—

There never did, there never will, and there never can, exist a Parliament, or any description of men, or any generation of men, in any country, possessed of the right or the power of binding and controuling posterity to the "*end of time*," or of commanding for ever how the world shall be governed, or who shall govern it; and therefore all such clauses, acts or declarations by which the makers of them attempt to do what they have neither the right nor the power to do, nor the power to execute, are in themselves null and void. Every age and generation must be as free to act for itself *in all cases* as the ages and generations which preceded it. The vanity and presumption of governing beyond the grave is the most ridiculous and insolent of all tyrannies. Man has no property in man; neither has any generation a property in the generations which are to follow. The Parliament or the people of 1688, or of any other period, had no more right to dispose of the people of the present day, or to bind or to controul them *in any shape whatever*, than the Parliament or the people of the present day have to dispose of, bind or controul those who are to live a hundred or a thousand years hence. Every generation is, and must be, competent to all the purposes which its occasions require. It is the living, and not the dead, that are to be accommodated. When man ceases to be, his power and his wants cease with him; and having no longer any participation in the concerns of this world, he has no longer any authority in directing who shall be its governors, or how its Government shall be organised, or how administered.

I am not contending for nor against any form of Government, nor for nor against any party, here or elsewhere. That which a whole Nation chooses to do, it has a right to do. Mr. Burke says, No. Where, then, does the right exist? I am contending for the rights of the *living*, and against their being willed away, and controuled and contracted for, by the manuscript assumed authority of the dead; and Mr. Burke is contending for the authority of the dead over the rights and freedom of the living. There was a time when Kings disposed of their Crowns by will upon their deathbeds, and consigned the people, like beasts of the field, to whatever suc-

cessor they appointed. This is now so exploded as scarcely to be remembered, and so monstrous as hardly to be believed; but the Parliamentary clauses upon which Mr. Burke builds his political church are of the same nature.

The laws of every country must be analogous to some common principle. In England no parent or master, nor all the authority of Parliament, omnipotent as it has called itself, can bind or controul the personal freedom even of an individual beyond the age of twenty-one years. On what ground of right, then, could the Parliament of 1688, or any other Parliament, bind all posterity for ever?

Those who have quitted the world, and those who are not yet arrived at it, are as remote from each other as the utmost stretch of mortal imagination can conceive. What possible obligation, then, can exist between them; what rule or principle can be laid down that of two non-entities, the one out of existence and the other not in, and who never can meet in this world, the one should controul the other to the end of time?

In England it is said that money cannot be taken out of the pockets of the people without their consent. But who authorised, or who could authorise, the Parliament of 1688 to controul and take away the freedom of posterity (who were not in existence to give or to withhold their consent), and limit and confine their right of acting in certain cases for ever?

A greater absurdity cannot present itself to the understanding of man than what Mr. Burke offers to his readers. He tells them, and he tells the world to come, that a certain body of men who existed a hundred years ago, made a law, and that there does not now exist in the Nation, nor ever will, nor ever can, a power to alter it. Under how many subtilties or absurdities has the divine right to govern been imposed on the credulity of mankind! Mr. Burke has discovered a new one, and he has shortened his journey to Rome by appealing to the power of this infallible Parliament of former days; and he produces what it has done as of divine authority, for that power must certainly be more than human which no human power to the end of time can alter.

But Mr. Burke has done some service, not to his cause, but to his country, by bringing those clauses into public view. They serve to demonstrate how necessary it is at all times to watch against the attempted encroachment of power, and to prevent its running to excess. It is somewhat extraordinary that the offence for which James II. was expelled, that of setting up power by *assumption*, should be re-acted, under another shape and form, by the Parliament that expelled him. It shows that the rights of man were but imperfectly understood at the Revolution; for

certain it is that the right which that Parliament set up by *assumption* (for by delegation it had it not, and could not have it, because none could give it) over the persons and freedom of posterity for ever, was of the same tyrannical unfounded kind which James attempted to set up over the Parliament and the Nation, and for which he was expelled. The only difference is (for in principle they differ not) that the one was an usurper over the living, and the other over the unborn; and as the one has no better authority to stand upon than the other, both of them must be equally null and void, and of no effect.

From what, or from whence, does Mr. Burke prove the right of any human power to bind posterity for ever? He has produced his clauses, but he must produce also his proofs that such a right existed, and show how it existed. If it ever existed it must now exist, for whatever appertains to the nature of man cannot be annihilated by man. It is the nature of man to die, and he will continue to die as long as he continues to be born. But Mr. Burke has set up a sort of political Adam, in whom all posterity are bound for ever; he must, therefore, prove that his Adam possessed such a power, or such a right.

The weaker any cord is the less will it bear to be stretched, and the worse is the policy to stretch it, unless it is intended to break it. Had any one proposed the overthrow of Mr. Burke's positions, he would have proceeded as Mr. Burke has done. He would have magnified the authorities, on purpose to have called the *right* of them into question; and the instant the question of right was started, the authorities must have been given up.

It requires but a very small glance of thought to perceive that altho' laws made in one generation often continue in force through succeeding generations, yet that they continue to derive their force from the consent of the living. A law not repealed continues in force, not because it *cannot* be repealed, but because it *is not* repealed; and the non-repealing passes for consent.

But Mr. Burke's clauses have not even this qualification in their favour. They become null, by attempting to become immortal. The nature of them precludes consent. They destroy the right which they *might* have, by grounding it on a right which they *cannot* have. Immortal power is not a human right, and therefore cannot be a right of Parliament. The Parliament of 1688 might as well have passed an act to have authorized themselves to live for ever, as to make their authority live for ever. All, therefore, that can be said of those clauses is that they are a formality of words, of as much import as if those who used them had addressed a congratula-

tion to themselves, and in the oriental stile of antiquity had said: O Parliament, live for ever!

The circumstances of the world are continually changing, and the opinions of men change also; and as Government is for the living, and not for the dead, it is the living only that has any right in it. That which may be thought right and found convenient in one age may be thought wrong and found inconvenient in another. In such cases, Who is to decide, the living, or the dead?

As almost one hundred pages of Mr. Burke's book are employed upon these clauses, it will consequently follow that if the clauses themselves, so far as they set up an *assumed usurped* dominion over posterity for ever, are unauthoritative, and in their nature null and void; that all his voluminous inferences, and declamation drawn therefrom, or founded thereon, are null and void also; and on this ground I rest the matter.

We now come more particularly to the affairs of France. Mr. Burke's book has the appearance of being written as instruction to the French Nation; but if I may permit myself the use of an extravagant metaphor, suited to the extravagance of the case, It is darkness attempting to illuminate light.

While I am writing this there are accidentally before me some proposals for a declaration of rights by the Marquis de la Fayette (I ask his pardon for using his former address, and do it only for distinction's sake) to the National Assembly, on the 11th of July, 1789, three days before the taking of the Bastille; and I cannot but remark with astonishment how opposite the sources are from which that gentleman and Mr. Burke draw their principles. Instead of referring to musty records and mouldy parchments to prove that the rights of the living are lost, "renounced and abdicated for ever," by those who are now no more, as Mr. Burke has done, M. de la Fayette applies to the living world, and emphatically says, "Call to mind the sentiments which Nature has engraved in the heart of every citizen, and which take a new force when they are solemnly recognised by all: For a Nation to love Liberty, it is sufficient that she knows it; and to be free, it is sufficient that she wills it." How dry, barren, and obscure is the source from which Mr. Burke labours; and how ineffectual, though gay with flowers, are all his declamation and his arguments compared with these clear, concise, and soul-animating sentiments! Few and short as they are, they lead to a vast field of generous and manly thinking, and do not finish, like Mr. Burke's periods, with music in the ear, and nothing in the heart.

As I have introduced M. de la Fayette, I will take the liberty of adding an anecdote respecting his farewell address to the Congress of America in 1783, which occurred fresh to my mind, when I saw Mr. Burke's thundering attack on the French Revolution. M. de la Fayette went to America at an early period of the war, and continued a volunteer in her service to the end. His conduct through the whole of that enterprise is one of the most extraordinary that is to be found in the history of a young man, scarcely then twenty years of age. Situated in a country that was like the lap of sensual pleasure, and with the means of enjoying it, how few are there to be found who would exchange such a scene for the woods and wildernesses of America, and pass the flowery years of youth in unprofitable danger and hardship! But such is the fact. When the war ended, and he was on the point of taking his final departure, he presented himself to Congress, and contemplating, in his affectionate farewell, the Revolution he had seen, expressed himself in these words: "May this great monument raised to Liberty, serve as a lesson to the oppressor, and an example to the oppressed!" When this address came to the hands of Dr. Franklin, who was then in France, he applied to Count Vergennes to have it inserted in the French Gazette, but never could obtain his consent. The fact was that Count Vergennes was an aristocratical despot at home, and dreaded the example of the American Revolution in France, as certain other persons now dread the example of the French Revolution in England; and Mr. Burke's tribute of fear (for in this light his book must be considered) runs parallel with Count Vergennes' refusal. But to return more particularly to his work—

"We have seen," says Mr. Burke, "the French rebel against a mild and lawful Monarch, with more fury, outrage, and insult, than any people has been known to rise against the most illegal usurper, or the most sanguinary tyrant." This is one among a thousand other instances, in which Mr. Burke shows that he is ignorant of the springs and principles of the French Revolution.

It was not against Louis XVI., but against the despotic principles of the government, that the Nation revolted. These principles had not their origin in him, but in the original establishment, many centuries back; and they were become too deeply rooted to be removed, and the Augean stable of parasites and plunderers too abominably filthy to be cleansed, by anything short of a complete and universal Revolution. When it becomes necessary to do a thing, the whole heart and soul should go into the measure, or not attempt it. That crisis was then arrived, and there remained no choice but to act with determined vigour, or not to act at

all. The King was known to be the friend of the Nation, and this circumstance was favourable to the enterprise. Perhaps no man bred up in the style of an absolute King, ever possessed a heart so little disposed to the exercise of that species of power as the present King of France. But the principles of the Government itself still remained the same. The Monarch and the Monarchy were distinct and separate things; and it was against the established despotism of the latter, and not against the person or principles of the former, that the revolt commenced, and the Revolution has been carried.

Mr. Burke does not attend to the distinction between *men* and *principles*; and, therefore, he does not see that a revolt may take place against the despotism of the latter, while there lies no charge of despotism against the former.

The natural moderation of Louis XVI. contributed nothing to alter the hereditary despotism of the Monarchy. All the tyrannies of former reigns, acted under that hereditary despotism, were still liable to be revived in the hands of a successor. It was not the respite of a reign that would satisfy France, enlightened as she then was become. A casual discontinuance of the *practice* of despotism, is not a discontinuance of its *principles*; the former depends on the virtue of the individual who is in immediate possession of the power; the latter, on the virtue and fortitude of the nation. In the case of Charles I. and James II. of England, the revolt was against the personal despotism of the men; whereas in France, it was against the hereditary despotism of the established government. But men who can consign over the rights of posterity for ever on the authority of a mouldy parchment, like Mr. Burke, are not qualified to judge of this Revolution. It takes in a field too vast for their views to explore, and proceeds with a mightiness of reason they cannot keep pace with.

But there are many points of view in which this Revolution may be considered. When despotism has established itself for ages in a country, as in France, it is not in the person of the King only that it resides. It has the appearance of being so in show, and in nominal authority; but it is not so in practice and in fact. It has its standard everywhere. Every office and department has its despotism, founded upon custom and usage. Every place has its Bastille, and every Bastille its despot. The original hereditary despotism resident in the person of the King, divides and subdivides itself into a thousand shapes and forms, till at last the whole of it is acted by deputation. This was the case in France; and against this species of despotism, proceeding on through an endless labyrinth of office

till the source of it is scarcely perceptible, there is no mode of redress. It strengthens itself by assuming the appearance of duty, and tyrannises under the pretence of obeying.

When a man reflects on the condition which France was in from the nature of her Government, he will see other causes for revolt than those which immediately connect themselves with the person or character of Louis XVI. There were, if I may so express it, a thousand despotisms to be reformed in France, which had grown up under the hereditary despotism of the monarchy, and became so rooted as to be in great measure independent of it. Between the Monarchy, the Parliament, and the Church, there was a *rivalship* of despotism; besides the feudal despotism operating locally, and the ministerial despotism operating everywhere. But Mr. Burke, by considering the King as the only possible object of a revolt, speaks as if France was a village, in which everything that passed must be known to its commanding officer, and no oppression could be acted but what he could immediately controul. Mr. Burke might have been in the Bastille his whole life, as well under Louis XVI. as Louis XIV., and neither the one nor the other have known that such a man as Mr. Burke existed. The despotic principles of the Government were the same in both reigns, though the dispositions of the men were as remote as tyranny and benevolence.

What Mr. Burke considers as a reproach to the French Revolution (that of bringing it forward under a reign more mild than the preceding ones) is one of its highest honours. The Revolutions that have taken place in other European countries, have been excited by personal hatred. The rage was against the man, and he became the victim. But, in the instance of France we see a revolution generated in the rational contemplation of the rights of man, and distinguishing from the beginning between persons and principles.

But Mr. Burke appears to have no idea of principles when he is contemplating Governments. "Ten years ago," says he, "I could have felicitated France on her having a Government, without inquiring what the nature of that Government was, or how it was administered." Is this the language of a rational man? Is it the language of a heart feeling as it ought to feel for the rights and happiness of the human race? On this ground, Mr. Burke must compliment all the Governments in the world, while the victims who suffer under them, whether sold into slavery, or tortured out of existence, are wholly forgotten. It is power, and not principles, that Mr. Burke venerates; and under this abominable depravity

he is disqualified to judge between them. Thus much for his opinion as to the occasions of the French Revolution. I now proceed to other considerations.

I know a place in America called Point-no-Point, because as you proceed along the shore, gay and flowery as Mr. Burke's language, it continually recedes and presents itself at a distance before you; but when you have got as far as you can go, there is no point at all. Just thus it is with Mr. Burke's three hundred and fifty-six pages. It is therefore difficult to reply to him. But as the points he wishes to establish may be inferred from what he abuses, it is in his paradoxes that we must look for his arguments.

As to the tragic paintings by which Mr. Burke has outraged his own imagination, and seeks to work upon that of his readers, they are very well calculated for theatrical representation, where facts are manufactured for the sake of show, and accommodated to produce, through the weakness of sympathy, a weeping effect. But Mr. Burke should recollect that he is writing history, and not *plays*, and that his readers will expect truth, and not the spouting rant of high-toned exclamation.

When we see a man dramatically lamenting in a publication intended to be believed that "*The age of chivalry is gone! that The glory of Europe is extinguished for ever! that the unbought grace of life (if any one knows what it is), the cheap defence of nations, the nurse of manly sentiment and heroic enterprise is gone!*" and all this because the Quixote age of chivalry nonsense is gone, what opinion can we form of his judgment, or what regard can we pay to his facts? In the rhapsody of his imagination he has discovered a world of windmills, and his sorrows are that there are no Quixotes to attack them. But if the age of Aristocracy, like that of Chivalry, should fall (and they had originally some connection), Mr. Burke, the trumpeter of the order, may continue his parody to the end, and finish with exclaiming: "*Othello's occupation's gone!*"

Notwithstanding Mr. Burke's horrid paintings, when the French Revolution is compared with the Revolutions of other countries, the astonishment will be that it is marked with so few sacrifices; but this astonishment will cease when we reflect that *principles*, and not *persons*, were the meditated objects of destruction. The mind of the nation was acted upon by a higher stimulus than what the consideration of persons could inspire, and sought a higher conquest than could be produced by the downfall of an enemy. Among the few who fell there do not appear to be any that were intentionally singled out. They all of them had their fate in the circumstances of the moment, and were not pursued with that

long, cold-blooded, unabated revenge which pursued the unfortunate Scotch in the affair of 1745.

Through the whole of Mr. Burke's book I do not observe that the Bastille is mentioned more than once, and that with a kind of implication as if he were sorry it was pulled down, and wished it were built up again. "We have rebuilt Newgate," says he, "and tenanted the mansion; and we have prisons almost as strong as the Bastille for those who dare to libel the Queens of France." As to what a madman like the person called Lord G—— G—— might say, to whom Newgate is rather a bedlam than a prison, it is unworthy a rational consideration. It was a madman that libelled, and that is sufficient apology; and it afforded an opportunity for confining him, which was the thing that was wished for. But certain it is that Mr. Burke, who does not call himself a madman (whatever other people may do), has libelled in the most unprovoked manner, and in the grossest stile of the most vulgar abuse, the whole representative authority of France, and yet Mr. Burke takes his seat in the British House of Commons! From his violence and his grief, his silence on some points and his excess on others, it is difficult not to believe that Mr. Burke is sorry, extremely sorry, that arbitrary power, the power of the Pope and the Bastille, are pulled down.

Not one glance of compassion, not one commiserating reflection that I can find throughout his book, has he bestowed on those who lingered out the most wretched of lives, a life without hope in the most miserable of prisons. It is painful to behold a man employing his talents to corrupt himself. Nature has been kinder to Mr. Burke than he is to her. He is not affected by the reality of distress touching his heart, but by the showy resemblance of it striking his imagination. He pities the plumage, but forgets the dying bird. Accustomed to kiss the aristocratical hand that hath purloined him from himself, he degenerates into a composition of art, and the genuine soul of nature forsakes him. His hero or his heroine must be a tragedy-victim expiring in show, and not the real prisoner of misery, sliding into death in the silence of a dungeon.

As Mr. Burke has passed over the whole transaction of the Bastille (and his silence is nothing in his favour), and has entertained his readers with reflections on supposed facts distorted into real falsehoods, I will give, since he has not, some account of the circumstances which preceded that transaction. They will serve to show that less mischief could scarcely have accompanied such an event when considered with the treacherous and hostile aggravations of the enemies of the Revolution.

The mind can hardly picture to itself a more tremendous scene than

what the city of Paris exhibited at the time of taking the Bastille, and for two days before and after, nor conceive the possibility of its quieting so soon. At a distance this transaction has appeared only as an act of heroism standing on itself, and the close political connection it had with the Revolution is lost in the brilliancy of the achievement. But we are to consider it as the strength of the parties brought man to man, and contending for the issue. The Bastille was to be either the prize or the prison of the assailants. The downfall of it included the idea of the downfall of despotism, and this compounded image was become as figuratively united as Bunyan's Doubting Castle and Giant Despair.

The National Assembly, before and at the time of taking the Bastille, was sitting at Versailles, twelve miles distance from Paris. About a week before the rising of the Parisians, and their taking the Bastille, it was discovered that a plot was forming, at the head of which was the Count d'Artois, the king's youngest brother, for demolishing the National Assembly, seizing its members, and thereby crushing, by a *coup de main*, all hopes and prospects of forming a free government. For the sake of humanity, as well as of freedom, it is well this plan did not succeed. Examples are not wanting to show how dreadfully vindictive and cruel are all old Governments, when they are successful against what they call a revolt.

This plan must have been some time in contemplation; because, in order to carry it into execution, it was necessary to collect a large military force round Paris, and cut off the communication between that city and the National Assembly at Versailles. The troops destined for this service were chiefly the foreign troops in the pay of France, and who, for this particular purpose, were drawn from the distant provinces where they were then stationed. When they were collected to the amount of about twenty-five and thirty thousand, it was judged time to put the plan in execution. The ministry who were then in office, and who were friendly to the Revolution, were instantly dismissed and a new ministry formed of those who had concerted the project, among whom was Count de Broglio, and to his share was given the command of those troops. The character of this man as described to me in a letter which I communicated to Mr. Burke before he began to write his book, and from an authority which Mr. Burke well knows was good, was that of "a high-flying aristocrat, cool, and capable of every mischief."

While these matters were agitating, the National Assembly stood in the most perilous and critical situation that a body of men can be sup-

posed to act in. They were the devoted victims, and they knew it. They had the hearts and wishes of their country on their side, but military authority they had none. The guards of Broglio surrounded the hall where the assembly sat, ready, at the word of command, to seize their persons, as had been done the year before to the Parliament of Paris. Had the National Assembly deserted their trust, or had they exhibited signs of weakness or fear, their enemies had been encouraged and the country depressed. When the situation they stood in, the cause they were engaged in and the crisis then ready to burst, which was to determine their personal and political fate and that of their country, and probably of Europe, are taken into one view, none but a heart callous with prejudice or corrupted by dependence can avoid interesting itself in their success.

The Archbishop of Vienne was at this time president of the National Assembly—a person too old to undergo the scene that a few days or a few hours might bring forth. A man of more activity and greater fortitude was necessary, and the National Assembly chose (under the form of a vice-president, for the presidency still resided in the Archbishop) M. de la Fayette; and this is the only instance of a vice-president being chosen. It was at the moment that this storm was pending (July 11th) that a declaration of rights was brought forward by M. de la Fayette; and is the same which is alluded to in page 17. It was hastily drawn up, and makes only a part of the more extensive declaration of rights agreed upon and adopted afterwards by the National Assembly. The particular reason for bringing it forward at this moment (M. de la Fayette has since informed me) was that if the National Assembly should fail in the threatened destruction that then surrounded it, some traces of its principles might have the chance of surviving the wreck.

Everything now was drawing to a crisis. The event was to be freedom or slavery. On one side, an army of nearly thirty thousand men; on the other, an unarmed body of citizens; for the citizens of Paris, on whom the National Assembly must then immediately depend, were as unarmed and as undisciplined as the citizens of London are now. The French guards had given strong symptoms of their being attached to the national cause; but their numbers were small, not a tenth part of the force that Broglio commanded, and their officers were in the interest of Broglio.

Matters being now ripe for execution, the new ministry made their appearance in office. The reader will carry in his mind that the Bastille was taken the 14th of July; the point of time I am now speaking to is the 12th. Immediately on the news of the change of ministry reaching Paris,

in the afternoon, all the playhouses and places of entertainment, shops and houses, were shut up. The change of ministry was considered as the prelude of hostilities, and the opinion was rightly founded.

The foreign troops began to advance towards the city. The Prince de Lambesc, who commanded a body of German cavalry, approached by the Palace of Louis XV., which connects itself with some of the streets. In his march, he insulted and struck an old man with his sword. The French are remarkable for their respect to old age; and the insolence with which it appeared to be done, uniting with the general fermentation they were in, produced a powerful effect, and a cry of "*To arms! To arms!*" spread itself in a moment over the city.

Arms they had none, nor scarcely any who knew the use of them; but desperate resolution, when every hope is at stake, supplies, for a while, the want of arms. Near where the Prince de Lambesc was drawn up, were large piles of stones collected for building the new bridge, and with these the people attacked the cavalry. A party of the French guards, upon hearing the firing, rushed from their quarters and joined the people; and night coming on, the cavalry retreated.

The streets of Paris, being narrow, are favourable for defence, and the loftiness of the houses, consisting of many stories, from which great annoyance might be given, secured them against nocturnal enterprises; and the night was spent in providing themselves with every sort of weapon they could make or procure: guns, swords, blacksmiths' hammers, carpenters' axes, iron crows, pikes, halberts, pitchforks, spits, clubs, etc., etc. The incredible numbers in which they assembled the next morning, and the still more incredible resolution they exhibited, embarrassed and astonished their enemies. Little did the new ministry expect such a salute. Accustomed to slavery themselves, they had no idea that Liberty was capable of such inspiration, or that a body of unarmed citizens would dare to face the military force of thirty thousand men. Every moment of this day was employed in collecting arms, concerting plans, and arranging themselves into the best order which such an instantaneous movement could afford. Broglie continued lying round the city, but made no farther advances this day, and the succeeding night passed with as much tranquillity as such a scene could possibly admit.

But defence only was not the object of the citizens. They had a cause at stake, on which depended their freedom or their slavery. They every moment expected an attack, or to hear of one made on the National Assembly; and in such a situation, the most prompt measures are sometimes the best. The object that now presented itself was the Bastille;

and the *éclat* of carrying such a fortress in the face of such an army, could not fail to strike a terror into the new ministry, who had scarcely yet had time to meet. By some intercepted correspondence, it was discovered that the Mayor of Paris, M. Defflesselles, who appeared to be in the interest of the citizens, was betraying them; from this discovery, there remained no doubt that Broglio would reinforce the Bastille the ensuing evening. It was therefore necessary to attack it that day; but before this could be done, it was first necessary to procure a better supply of arms than they were then possessed of.

There was, adjoining to the city, a large magazine of arms deposited at the Hospital of the Invalids, which the citizens summoned to surrender; and as the place was not defensible, nor attempted much defence, they soon succeeded. Thus supplied, they marched to attack the Bastille; a vast mixed multitude of all ages, and of all degrees, armed with all sorts of weapons. Imagination would fail in describing to itself the appearance of such a procession, and of the anxiety for the events which a few hours or few minutes might produce. What plans the ministry was forming, were as unknown to the people within the city, as what the citizens were doing was unknown to the ministry; and what movements Broglio might make for the support or relief of the place, were to the citizens equally as unknown. All was mystery and hazard.

That the Bastille was attacked with an enthusiasm of heroism, such only as the highest animation of Liberty could inspire, and carried in the space of a few hours, is an event which the world is fully possessed of. I am not undertaking a detail of the attack, but bringing into view the conspiracy against the nation which provoked it, and which fell with the Bastille. The prison to which the new ministry were dooming the National Assembly, in addition to its being the high altar and castle of despotism, became the proper object to begin with. This enterprise broke up the new ministry, who began now to fly from the ruin they had prepared for others. The troops of Broglio dispersed, and himself fled also.

Mr. Burke has spoken a great deal about plots, but he has never once spoken of this plot against the National Assembly, and the liberties of the Nation; and that he might not, he has passed over all the circumstances that might throw it in his way. The exiles who have fled from France, whose case he so much interests himself in, and from whom he has had his lesson, fled in consequence of the miscarriage of this plot. No plot was formed against them; they were plotting against others; and those who fell, met, not unjustly, the punishment they were preparing

to execute. But will Mr. Burke say, that if this plot, contrived with the subtilty of an ambuscade, had succeeded, the successful party would have restrained their wrath so soon? Let the history of all old Governments answer the question.

Whom has the National Assembly brought to the scaffold? None. They were themselves the devoted victims of this plot, and they have not retaliated; why, then, are they charged with revenge they have not acted? In the tremendous breaking forth of a whole people, in which all degrees, tempers, and characters are confounded, delivering themselves by a miracle of exertion from the destruction meditated against them, is it to be expected that nothing will happen? When men are sore with the sense of oppressions, and menaced with the prospect of new ones, is the calmness of philosophy or the palsy of insensibility to be looked for? Mr. Burke exclaims against outrage; yet the greatest is that which himself has committed. His book is a volume of outrage, not apologised for by the impulse of a moment, but cherished through a space of ten months; yet Mr. Burke had no provocation, no life, no interest at stake.

More of the citizens fell in this struggle than of their opponents; but four or five persons were seized by the populace and instantly put to death; the Governor of the Bastille, and the Mayor of Paris, who was detected in the act of betraying them; and afterwards Foulon, one of the new ministry, and Berthier, his son-in-law, who had accepted the office of intendant of Paris. Their heads were stuck upon spikes, and carried about the city; and it is upon this mode of punishment that Mr. Burke builds a great part of his tragic scenes. Let us therefore examine how men came by the idea of punishing in this manner.

They learn it from the Governments they live under, and retaliate the punishments they have been accustomed to behold. The heads stuck upon spikes, which remained for years upon Temple Bar, differed nothing in the horror of the scene from those carried about upon spikes at Paris; yet this was done by the English Government. It may perhaps be said that it signifies nothing to a man what is done to him after he is dead; but it signifies much to the living; it either tortures their feelings or hardens their hearts, and in either case it instructs them how to punish when power falls into their hands.

Lay then the axe to the root, and teach Governments humanity. It is their sanguinary punishments which corrupt mankind. In England the punishment in certain cases is by *hanging, drawing and quartering*; the heart of the sufferer is cut out and held up to the view of the populace. In France, under the former Government, the punishments were not less

barbarous. Who does not remember the execution of Damien, torn to pieces by horses? The effect of those cruel spectacles exhibited to the populace is to destroy tenderness or excite revenge; and by the base and false idea of governing men by terror, instead of reason, they become precedents. It is over the lowest class of mankind that Government by terror is intended to operate, and it is on them that it operates to the worst effect. They have sense enough to feel they are the objects aimed at; and they inflict in their turn the examples of terror they have been instructed to practise.

There is in all European countries a large class of people of that description, which in England is called the *Mob*. Of this class were those who committed the burnings and devastations in London in 1780, and of this class were those who carried the heads upon spikes in Paris. Foulon and Berthier were taken up in the country, and sent to Paris, to undergo their examination at the Hotel de Ville; for the National Assembly, immediately on the new ministry coming into office, passed a decree, which they communicated to the King and Cabinet, that they (the National Assembly) would hold the ministry, of which Foulon was one, responsible for the measures they were advising and pursuing; but the mob, incensed at the appearance of Foulon and Berthier, tore them from their conductors before they were carried to the Hotel de Ville, and executed them on the spot. Why then does Mr. Burke charge outrages of this kind on a whole people? As well may he charge the riots and outrages of 1780 on all the people of London, or those in Ireland on all his countrymen.

But everything we see or hear offensive to our feelings and derogatory to the human character should lead to other reflections than those of reproach. Even the beings who commit them have some claim to our consideration. How then is it that such vast classes of mankind as are distinguished by the appellation of the vulgar, or the ignorant mob, are so numerous in all old countries? The instant we ask ourselves this question, reflection feels an answer. They arise, as an unavoidable consequence, out of the ill construction of all old Governments in Europe, England included with the rest. It is by distortedly exalting some men, that others are distortedly debased, till the whole is out of nature. A vast mass of mankind are degradedly thrown into the background of the human picture, to bring forward, with greater glare, the puppet-show of State and Aristocracy. In the commencement of a Revolution, those men are rather the followers of the *camp* than of the *standard* of Liberty, and have yet to be instructed how to reverence it.

I give to Mr. Burke all his theatrical exaggerations for facts, and I

then ask him if they do not establish the certainty of what I here lay down? Admitting them to be true, they show the necessity of the French Revolution, as much as any one thing he could have asserted. These outrages were not the effect of the principles of the Revolution, but of the degraded mind that existed before the Revolution, and which the Revolution is calculated to reform. Place them then to their proper cause, and take the reproach of them to your own side.

It is to the honour of the National Assembly and the city of Paris that, during such a tremendous scene of arms and confusion, beyond the controul of all authority, they have been able, by the influence of example and exhortation, to restrain so much. Never were more pains taken to instruct and enlighten mankind, and to make them see that their interest consisted in their virtue, and not in their revenge, than have been displayed in the Revolution of France. I now proceed to make some remarks on Mr. Burke's account of the expedition to Versailles, October the 5th and 6th.

I cannot consider Mr. Burke's book in any other light than a dramatic performance; and he must, I think, have considered it in the same light himself, by the poetical liberties he has taken of omitting some facts, distorting others, and making the whole machinery bend to produce a stage effect. Of this kind is his account of the expedition to Versailles. He begins this account by omitting the only facts which as causes are known to be true; everything beyond these is conjecture even in Paris; and he then works up a tale accommodated to his own passions and prejudices.

It is to be observed throughout Mr. Burke's book that he never speaks of plots *against* the Revolution; and it is from those plots that all the mischiefs have arisen. It suits his purpose to exhibit the consequences without their causes. It is one of the arts of the drama to do so. If the crimes of men were exhibited with their sufferings, the stage effect would sometimes be lost, and the audience would be inclined to approve where it was intended they should commiserate.

After all the investigations that have been made into this intricate affair (the expedition to Versailles), it still remains enveloped in all that kind of mystery which ever accompanies events produced more from a concurrence of awkward circumstances than from fixed design. While the characters of men are forming, as is always the case in Revolutions, there is a reciprocal suspicion, and a disposition to misinterpret each other; and even parties directly opposite in principle will sometimes concur in pushing forward the same movement with very different views, and with the hopes of its producing very different consequences. A great

deal of this may be discovered in this embarrassed affair, and yet the issue of the whole was what nobody had in view.

The only things certainly known are that considerable uneasiness was at this time excited at Paris by the delay of the King in not sanctioning and forwarding the decrees of the National Assembly, particularly that of the *Declaration of the Rights of Man*, and the decrees of the *fourth of August*, which contained the foundation principles on which the constitution was to be erected. The kindest, and perhaps the fairest conjecture upon this matter is, that some of the ministers intended to make remarks and observations upon certain parts of them before they were finally sanctioned and sent to the provinces; but be this as it may, the enemies of the Revolution derived hope from the delay, and the friends of the Revolution uneasiness.

During this state of suspense, the *Garde du Corps*, which was composed, as such regiments generally are, of persons much connected with the Court, gave an entertainment at Versailles (October 1) to some foreign regiments then arrived; and when the entertainment was at the height, on a signal given the *Garde du Corps* tore the national cockade from their hats, trampled it under foot, and replaced it with a counter-cockade prepared for the purpose. An indignity of this kind amounted to defiance. It was like declaring war; and if men will give challenges they must expect consequences. But all this Mr. Burke has carefully kept out of sight. He begins his account by saying: "History will record that on the morning of the 6th of October, 1789, the King and Queen of France, after a day of confusion, alarm, dismay, and slaughter, lay down under the pledged security of public faith to indulge nature in a few hours of respite, and troubled melancholy repose." This is neither the sober stile of history, nor the intention of it. It leaves everything to be guessed at and mistaken. One would at least think there had been a battle; and a battle there probably would have been had it not been for the moderating prudence of those whom Mr. Burke involves in his censures. By his keeping the *Garde du Corps* out of sight Mr. Burke has afforded himself the dramatic licence of putting the King and Queen in their places, as if the object of the expedition was against them. But to return to my account—

This conduct of the *Garde du Corps*, as might well be expected, alarmed and enraged the Parisians. The colours of the cause, and the cause itself, were become too united to mistake the intention of the insult, and the Parisians were determined to call the *Garde du Corps* to an account. There was certainly nothing of the cowardice of assassination in

marching in the face of day to demand satisfaction, if such a phrase may be used, of a body of armed men who had voluntarily given defiance. But the circumstance which serves to throw this affair into embarrassment is, that the enemies of the Revolution appear to have encouraged it as well as its friends. The one hoped to prevent a civil war by checking it in time, and the other to make one. The hopes of those opposed to the Revolution rested in making the King of their party, and getting him from Versailles to Metz, where they expected to collect a force and set up a standard. We have, therefore, two different objects presenting themselves at the same time, and to be accomplished by the same means; the one to chastise the *Garde du Corps*, which was the object of the Parisians; the other to render the confusion of such a scene an inducement to the King to set off for Metz.

On the 5th of October a very numerous body of women, and men in the disguise of women, collected round the Hotel de Ville or town-hall at Paris, and set off for Versailles. Their professed object was the *Garde du Corps*; but prudent men readily recollect that mischief is more easily begun than ended; and this impressed itself with the more force from the suspicions already stated, and the irregularity of such a cavalcade. As soon, therefore, as a sufficient force could be collected, M. de la Fayette, by orders from the civil authority of Paris, set off after them at the head of twenty thousand of the Paris militia. The Revolution could derive no benefit from confusion, and its opposers might. By an amiable and spirited manner of address he had hitherto been fortunate in calming disquietudes, and in this he was extraordinarily successful; to frustrate, therefore, the hopes of those who might seek to improve this scene into a sort of justifiable necessity for the King's quitting Versailles and withdrawing to Metz, and to prevent at the same time the consequences that might ensue between the *Garde du Corps* and this phalanx of men and women, he forwarded expresses to the King, that he was on his march to Versailles, by the orders of the civil authority of Paris, for the purpose of peace and protection, expressing at the same time the necessity of restraining the *Garde du Corps* from firing upon the people.

He arrived at Versailles between ten and eleven at night. The *Garde du Corps* was drawn up, and the people had arrived some time before, but everything had remained suspended. Wisdom and policy now consisted in changing a scene of danger into a happy event. M. de la Fayette became the mediator between the enraged parties; and the King, to remove the uneasiness which had arisen from the delay already stated, sent for the President of the National Assembly, and signed the Declaration of the

Rights of Man, and such other parts of the Constitution as were in readiness.

It was now about one in the morning. Everything appeared to be composed, and a general congratulation took place. By the beat of drum a proclamation was made that the citizens of Versailles would give the hospitality of their houses to their fellow-citizens of Paris. Those who could not be accommodated in this manner remained in the streets, or took up their quarters in the churches; and at two o'clock the King and Queen retired.

In this state matters passed till the break of day, when a fresh disturbance arose from the censurable conduct of some of both parties, for such characters there will be in all such scenes. One of the *Garde du Corps* appeared at one of the windows of the palace, and the people who had remained during the night in the streets accosted him with reviling and provocative language. Instead of retiring, as in such a case prudence would have dictated, he presented his musket, fired, and killed one of the Paris militia. The peace being thus broken, the people rushed into the palace in quest of the offender. They attacked the quarters of the *Garde du Corps* within the palace, and pursued them throughout the avenues of it, and to the apartments of the King. On this tumult, not the Queen only, as Mr. Burke has represented it, but every person in the palace was awakened and alarmed; and M. de la Fayette had a second time to interpose between the parties, the event of which was that the *Garde du Corps* put on the national cockade, and the matter ended as by oblivion, after the loss of two or three lives.

During the latter part of the time in which this confusion was acting, the King and Queen were in public at the balcony, and neither of them concealed for safety's sake, as Mr. Burke insinuates. Matters being thus appeased, and tranquillity restored, a general acclamation broke forth of *Le Roi à Paris—Le Roi à Paris—The King of Paris*. It was the shout of peace, and immediately accepted on the part of the King. By this measure all future projects of trepanning the King to Metz, and setting up the standard of opposition to the Constitution, were prevented, and the suspicions extinguished. The King and his family reached Paris in the evening, and were congratulated on their arrival by M. Bailley, the Mayor of Paris, in the name of the citizens. Mr. Burke, who throughout his book confounds things, persons, and principles, as in his remarks on M. Bailley's address, confounded time also. He censures M. Bailley for calling it "*un bon jour*," a good day. Mr. Burke should have informed himself that this scene took up the space of two days, the day on which

it began with every appearance of danger and mischief, and the day on which it terminated without the mischiefs that threatened; and that it is to this peaceful termination that M. Bailley alludes, and to the arrival of the King at Paris. Not less than three hundred thousand persons arranged themselves in the procession from Versailles to Paris, and not an act of molestation was committed during the whole march.

Mr. Burke, on the authority of M. Lally Tollendal, a deserter from the National Assembly, says, that on entering Paris, the people shouted "*Tous les évêques à la lanterne.*" All Bishops to be hanged at the lanthorn or lamp-posts. It is surprising that nobody could hear this but Lally Tollendal, and that nobody should believe it but Mr. Burke. It has not the least connection with any part of the transaction, and is totally foreign to every circumstance of it. The Bishops had never been introduced before into any scene of Mr. Burke's drama: why then are they, all at once, and altogether, *tout à coup, et tous ensemble*, introduced now? Mr. Burke brings forward his bishops and his lanthorn-like figures in a magic lanthorn, and raises his scenes by contrast instead of connection. But it serves to show, with the rest of his book, what little credit ought to be given where even probability is set at defiance, for the purpose of defaming; and with this reflection, instead of a soliloquy in praise of chivalry, as Mr. Burke has done, I close the account of the expedition to Versailles.

I have now to follow Mr. Burke through a pathless wilderness of rhapsodies, and a sort of descant upon Governments, in which he asserts whatever he pleases, on the presumption of its being believed, without offering either evidence or reasons for so doing.

Before anything can be reasoned upon to a conclusion, certain facts, principles, or data, to reason from, must be established, admitted, or denied. Mr. Burke, with his usual outrage, abuses the *Declaration of the Rights of Man*, published by the National Assembly of France as the basis on which the constitution of France is built. This he calls "paltry and blurred sheets of paper about the rights of man." Does Mr. Burke mean to deny that *man* has any rights? If he does, then he must mean that there are no such things as rights anywhere, and that he has none himself; for who is there in the world but man? But if Mr. Burke means to admit that man has rights, the question then will be: What are those rights, and how came man by them originally?

The error of those who reason by precedents drawn from antiquity, respecting the rights of man, is that they do not go far enough into

antiquity. They do not go the whole way. They stop in some of the intermediate stages of an hundred or a thousand years, and produce what was then done, as a rule for the present day. This is not authority at all. If we travel still farther into antiquity, we shall find a direct contrary opinion and practice prevailing; and if antiquity is to be authority, a thousand such authorities may be produced, successively contradicting each other; but if we proceed on, we shall at last come out right; we shall come to the time when man came from the hand of his Maker. What was he then? Man. Man was his high and only title, and a higher cannot be given him. But of titles I shall speak hereafter.

We are now got at the origin of man, and at the origin of his rights. As to the manner in which the world has been governed from that day to this, it is no farther any concern of ours than to make a proper use of the errors or the improvements which the history of it presents. Those who lived a hundred or a thousand years ago, were then moderns, as we are now. They had *their* ancients, and those ancients had others, and we also shall be ancients in our turn. If the mere name of antiquity is to govern in the affairs of life, the people who are to live an hundred or a thousand years hence, may as well take us for a precedent, as we make a precedent of those who lived an hundred or a thousand years ago. The fact is, that portions of antiquity, by proving everything, establish nothing. It is authority against authority all the way, till we come to the divine origin of the rights of man at the creation. Here our inquiries find a resting-place, and our reason finds a home. If a dispute about the rights of man had arisen at the distance of an hundred years from the creation, it is to this source of authority they must have referred, and it is to this same source of authority that we must now refer.

Though I mean not to touch upon any sectarian principle of religion, yet it may be worth observing, that the genealogy of Christ is traced to Adam. Why then not trace the rights of man to the creation of man? I will answer the question. Because there have been upstart Governments, thrusting themselves between and presumptuously working to *un-make* man.

If any generation of men ever possessed the right of dictating the mode by which the world should be governed for ever, it was the first generation that existed; and if that generation did it not, no succeeding generation can show any authority for doing it, nor can set any up. The illuminating and divine principle of the equal rights of man (for it has its origin from the Maker of man) relates, not only to the living individuals,

but to generations of men succeeding each other. Every generation is equal in rights to the generations which preceded it, by the same rule that every individual is born equal in rights with his contemporary.

Every history of the creation, and every traditionary account, whether from the lettered or unlettered world, however they may vary in their opinion or belief of certain particulars, all agree in establishing one point, *the unity of man*; by which I mean that men are all of *one degree*, and consequently that all men are born equal, and with equal natural rights, in the same manner as if posterity had been continued by *creation* instead of *generation*, the latter being only the mode by which the former is carried forward; and consequently every child born into the world must be considered as deriving its existence from God. The world is as new to him as it was to the first man that existed, and his natural right in it is of the same kind.

The Mosaic account of the creation, whether taken as divine authority or merely historical, is fully up to this point, *the unity or equality of man*. The expressions admit of no controversy. "And God said, Let us make man in our own image. In the image of God created he him; male and female created he them." The distinction of sexes is pointed out, but no other distinction is even implied. If this be not divine authority, it is at least historical authority, and shows that the equality of man, so far from being a modern doctrine, is the oldest upon record.

It is also to be observed that all the religions known in the world are founded, so far as they relate to man, on the *unity of man*, as being all of one degree. Whether in heaven or in hell, or in whatever state man may be supposed to exist hereafter, the good and the bad are the only distinctions. Nay, even the laws of Governments are obliged to slide into this principle, by making degrees to consist in crimes and not in persons.

It is one of the greatest of all truths, and of the highest advantage to cultivate. By considering man in this light, and by instructing him to consider himself in this light, it places him in a close connection with all his duties, whether to his Creator or to the creation, of which he is a part; and it is only when he forgets his origin, or, to use a more fashionable phrase, his *birth and family*, that he becomes dissolute. It is not among the least of the evils of the present existing Governments in all parts of Europe that man, considered as man, is thrown back to a vast distance from his Maker, and the artificial chasm filled up by a succession of barriers, or sort of turnpike gates, through which he has to pass. I will quote Mr. Burke's catalogue of barriers that he has set up between Man and his Maker. Putting himself in the character of a herald, he says: *We*

fear God—we look with AWE to kings—with affection to Parliaments—with duty to magistrates—with reverence to priests, and with respect to nobility. Mr. Burke has forgotten to put in “chivalry.” He has also forgotten to put in Peter.

The duty of man is not a wilderness of turnpike gates, through which he is to pass by tickets from one to the other. It is plain and simple, and consists but of two points. His duty to God, which every man must feel; and with respect to his neighbour, to do as he would be done by. If those to whom power is delegated do well, they will be respected; if not, they will be despised; and with regard to those to whom no power is delegated, but who assume it, the rational world can know nothing of them.

Hitherto we have spoken only (and that but in part) of the natural rights of man. We have now to consider the civil rights of man, and to show how the one originates from the other. Man did not enter into society to become *worse* than he was before, not to have fewer rights than he had before, but to have those rights better secured. His natural rights are the foundation of all his civil rights. But in order to pursue this distinction with more precision, it will be necessary to mark the different qualities of natural and civil rights.

A few words will explain this. Natural rights are those which appertain to man in right of his existence. Of this kind are all the intellectual rights, or rights of the mind, and also all those rights of acting as an individual for his own comfort and happiness, which are not injurious to the natural rights of others. Civil rights are those which appertain to man in right of his being a member of society. Every civil right has for its foundation some natural right pre-existing in the individual, but to the enjoyment of which his individual power is not, in all cases, sufficiently competent. Of this kind are all those which relate to security and protection.

From this short view it will be easy to distinguish between that class of natural rights which man retains after entering into society and those which he throws into the common stock as a member of society.

The natural rights which he retains are all those in which the *power* to execute it is as perfect in the individual as the right itself. Among this class, as is before mentioned, are all the intellectual rights, or rights of the mind; consequently religion is one of those rights. The natural rights which are not retained, are all those in which, though the right is perfect in the individual, the power to execute them is defective. They answer not his purpose. A man, by natural right, has a right to judge in his own cause; and so far as the right of the mind is concerned, he never surrenders it. But what availeth it him to judge, if he has not power to

redress? He therefore deposits this right in the common stock of society, and takes the arm of society, of which he is a part, in preference and in addition to his own. Society *grants* him nothing. Every man is a proprietor in society, and draws on the capital as a matter of right.

From these premisses two or three certain conclusions will follow:

First, *That every civil right grows out of a natural right; or, in other words, is a natural right exchanged.*

Secondly, *That civil power properly considered as such is made up of the aggregate of that class of the natural rights of man, which becomes defective in the individual in point of power, and answers not his purpose, but when collected to a focus becomes competent to the purpose of every one.*

Thirdly, *That the power produced from the aggregate of natural rights, imperfect in power in the individual, cannot be applied to invade the natural rights which are retained in the individual, and in which the power to execute is as perfect as the right itself.*

We have now, in a few words, traced man from a natural individual to a member of society, and shown, or endeavoured to show, the quality of the natural rights retained, and of those which are exchanged for civil rights. Let us now apply these principles to Governments.

In casting our eyes over the world, it is extremely easy to distinguish the Governments which have arisen out of society, or out of the social compact, from those which have not; but to place this in a clearer light than what a single glance may afford, it will be proper to take a review of the several sources from which Governments have arisen and on which they have been founded.

They may be all comprehended under three heads.

First, *Superstition.*

Secondly, *Power.*

Thirdly, *The common interest of society and the common rights of man.*

The first was a Government of Priestcraft, the second of Conquerors, and the third of Reason.

When a set of artful men pretended, through the medium of oracles, to hold intercourse with the Deity, as familiarly as they now march up the back-stairs in European Courts, the world was completely under the government of superstition. The oracles were consulted, and whatever they were made to say became the law; and this sort of Government lasted as long as this sort of superstition lasted.

After these a race of conquerors arose, whose Government, like that

of William the Conqueror, was founded in power, and the sword assumed the name of a sceptre. Governments thus established last as long as the power to support them lasts; but that they might avail themselves of every engine in their favour, they united fraud to force, and set up an idol which they called *Divine Right*, and which, in imitation of the Pope, who affects to be spiritual and temporal, and in contradiction to the Founder of the Christian religion, twisted itself afterwards into an idol of another shape, called *Church and State*. The key of St. Peter and the key of the Treasury became quartered on one another, and the wondering cheated multitude worshipped the invention.

When I contemplate the natural dignity of man, when I feel (for Nature has not been kind enough to me to blunt my feelings) for the honour and happiness of its character, I become irritated at the attempt to govern mankind by force and fraud, as if they were all knaves and fools and can scarcely avoid disgust at those who are thus imposed upon.

We have now to review the governments which arise out of society, in contradistinction to those which arose out of superstition and conquest.

It has been thought a considerable advance towards establishing the principles of Freedom to say that Government is a compact between those who govern and those who are governed; but this cannot be true, because it is putting the effect before the cause; for as man must have existed before Governments existed, there necessarily was a time when Governments did not exist, and consequently there could originally exist no governors to form such a compact with. The fact therefore must be that the *individuals themselves*, each in his own personal and sovereign right, *entered into a compact with each other* to produce a Government: and this is the only mode in which Governments have a right to arise, and the only principle on which they have a right to exist.

To possess ourselves of a clear idea of what Government is, or ought to be, we must trace it to its origin. In doing this we shall easily discover that Governments must have arisen either *out* of the people or *over* the people. Mr. Burke has made no distinction. He investigates nothing to its source, and therefore he confounds everything; but he has signified his intention of undertaking, at some future opportunity, a comparison between the Constitutions of England and France. As he thus renders it a subject of controversy by throwing the gauntlet, I take him up on his own ground. It is in high challenges that high truths have the right of appearing; and I accept it with the more readiness because it affords me, at the same time, an opportunity of pursuing the subject with respect to Governments arising out of society.

But it will be first necessary to define what is meant by a *Constitution*. It is not sufficient that we adopt the word; we must fix also a standard signification to it.

A Constitution is not a thing in name only, but in fact. It has not an ideal, but a real existence; and wherever it cannot be produced in a visible form, there is none. A Constitution is a thing *antecedent* to a Government, and a Government is only the creature of a Constitution. The Constitution of a country is not the act of its Government, but of the people constituting a Government. It is the body of elements, to which you can refer, and quote article by article; and which contains the principles on which the Government shall be established, the manner in which it shall be organised, the powers it shall have, the mode of elections, the duration of Parliaments, or by what other name such bodies may be called; the powers which the executive part of the Government shall have; and in fine, everything that relates to the complete organisation of a civil Government, and the principles on which it shall act, and by which it shall be bound. A Constitution, therefore, is to a Government what the laws made afterwards by that Government are to a Court of Judicature. The Court of Judicature does not make the laws, neither can it alter them; it only acts in conformity to the laws made: and the Government is in like manner governed by the Constitution.

Can, then, Mr. Burke produce the English Constitution? If he cannot, we may fairly conclude that though it has been so much talked about, no such thing as a Constitution exists, or ever did exist, and consequently that the people have yet a Constitution to form.

Mr. Burke will not, I presume, deny the position I have already advanced—namely, that Governments arise either *out* of the people or *over* the people. The English Government is one of those which arose out of a conquest, and not out of society, and consequently it arose over the people; and though it has been much modified from the opportunity of circumstances since the time of William the Conqueror, the country has never yet regenerated itself, and is therefore without a Constitution.

I readily perceive the reason why Mr. Burke declined going into the comparison between the English and French Constitutions, because he could not but perceive, when he sat down to the task, that no such thing as a Constitution existed on his side the question. His book is certainly bulky enough to have contained all he could say on this subject, and it would have been the best manner in which people could have judged of their separate merits. Why then has he declined the only thing that was worth while to write upon? It was the strongest ground he could take,

if the advantages were on his side, but the weakest if they were not; and his declining to take it is either a sign that he could not possess it or could not maintain it.

Mr. Burke said, in a speech last winter in Parliament, that *when the National Assembly first met in three Orders* (the Tiers Etats, the Clergy, and the Noblesse), *France had then a good constitution*. This shows among numerous other instances, that Mr. Burke does not understand what a constitution is. The persons so met were not a *Constitution*, but a *Convention*, to make a Constitution.

The present National Assembly of France is, strictly speaking, the *personal social compact*. The members of it are the delegates of the Nation in its *original* character; future assemblies will be the delegates of the Nation in its *organised* character. The authority of the present assembly is different to what the authority of future assemblies will be. The authority of the present one is to form a Constitution; the authority of future assemblies will be to legislate according to the principles and forms prescribed in that Constitution; and if experience should hereafter show that alterations, amendments, or additions are necessary, the Constitution will point out the mode by which such things shall be done, and not leave it to the discretionary power of the future Government.

A Government on the principles on which constitutional Governments arising out of society are established, cannot have the right of altering itself. If it had, it would be arbitrary. It might make itself what it pleased; and wherever such a right is set up, it shows there is no Constitution. The act by which the English Parliament empowered itself to sit seven years, shows there is no Constitution in England. It might, by the same self-authority, have sat any greater number of years, or for life. The bill which the present Mr. Pitt brought into Parliament some years ago, to reform Parliament, was on the same erroneous principle. The right of reform is in the nation in its original character, and the constitutional method would be by a general convention elected for the purpose. There is, moreover, a paradox in the idea of vitiated bodies reforming themselves.

From these preliminaries I proceed to draw some comparisons. I have already spoken of the declaration of rights; and as I mean to be as concise as possible, I shall proceed to other parts of the French Constitution.

The Constitution of France says, *That every man who pays a tax of sixty sous per annum* (2s. 6d. English) *is an elector*. What article will Mr. Burke place against this? Can anything be more limited, and at the

same time more capricious, than the qualifications of electors are in England? Limited—because not one man in an hundred (I speak much within compass) is admitted to vote. Capricious—because the lowest character that can be supposed to exist, and who has not so much as the visible means of an honest livelihood, is an elector in some places: while in other places, the man who pays very large taxes, and has a known fair character, and the farmer who rents to the amount of three or four hundred pounds a year, with a property on that farm to three or four times that amount, is not admitted to be an elector.

Everything is out of nature, as Mr. Burke says on another occasion, in this strange chaos, and all sorts of follies are blended with all sorts of crimes.

William the Conqueror and his descendants parcelled out the country in this manner, and bribed some parts of it by what they called charters to hold the other parts of it the better subjected to their will. This is the reason why so many of those charters abound in Cornwall; the people were averse to the Government established at the conquest, and the towns were garrisoned and bribed to enslave the country. All the old charters are the badges of this conquest, and it is from this source that the capriciousness of elections arises.

The French Constitution says, *that the number of representatives for any place shall be in a ratio to the number of taxable inhabitants or electors.*

What article will Mr. Burke place against this? The county of Yorkshire, which contains nearly a million of souls, sends two county members; and so does the county of Rutland, which contains not an hundredth part of that number. The town of Old Sarum, which contains not three houses, sends two members; and the town of Manchester, which contains upwards of sixty thousand souls, is not admitted to send any. Is there any principle in these things? Is there anything by which you can trace the marks of freedom, or discover those of wisdom? No wonder then Mr. Burke has declined the comparison, and endeavoured to lead his readers from the point by a wild, unsystematical, display of paradoxical rhapsodies.

The French Constitution says, *that the National Assembly shall be elected every two years.*

What article will Mr. Burke place against this? Why, that the Nation has no right at all in the case; that the Government is perfectly arbitrary with respect to this point; and he can quote for his authority the precedent of a former Parliament.

The French Constitution says, there shall be no game laws, that the farmer on whose lands wild game shall be found (for it is by the produce of his lands they are fed) shall have a right to what he can take; that there shall be no monopolies of any kind—that all trade shall be free and every man free to follow any occupation by which he can procure an honest livelihood, and in any place, town, or city throughout the Nation.

What will Mr. Burke say to this? In England, game is made the property of those at whose expense it is not fed; and with respect to monopolies, the country is cut up into monopolies. Every chartered town is an aristocratical monopoly in itself, and the qualification of electors proceeds out of those chartered monopolies. Is this freedom? Is this what Mr. Burke means by a Constitution?

In these chartered monopolies, a man coming from another part of the country is hunted from them as if he were a foreign enemy. An Englishman is not free of his own country; every one of those places presents a barrier in his way, and tells him he is not a freeman—that he has no rights. Within these monopolies are other monopolies. In a city, such for instance as Bath, which contains between twenty and thirty thousand inhabitants, the right of electing representatives to Parliament is monopolized by about thirty-one persons. And within these monopolies are still others. A man even of the same town, whose parents were not in circumstances to give him an occupation, is debarred, in many cases, from the natural right of acquiring one, be his genius or industry what it may.

Are these things examples to hold out to a country regenerating itself from slavery, like France? Certainly they are not, and certain am I, that when the people of England come to reflect upon them they will, like France, annihilate those badges of ancient oppression, those traces of a conquered nation. Had Mr. Burke possessed talents similar to the author of "On the Wealth of Nations," he would have comprehended all the parts which enter into, and, by assemblage, form a constitution. He would have reasoned from minutiae to magnitude. It is not from his prejudices only, but from the disorderly cast of his genius, that he is unfitted for the subject he writes upon. Even his genius is without a Constitution. It is a genius at random, and not a genius constituted. But he must say something. He has therefore mounted in the air like a balloon, to draw the eyes of the multitude from the ground they stand upon.

Much is to be learned from the French Constitution. Conquest and tyranny transplanted themselves with William the Conqueror from Normandy into England, and the country is yet disfigured with the marks.

May, then, the example of all France contribute to regenerate the freedom which a province of it destroyed!

The French Constitution says *that to preserve the national representation from being corrupt no member of the National Assembly shall be an officer of the Government, a placeman or a pensioner.*

What will Mr. Burke place against this? I will whisper his answer—Loaves and Fishes. Ah! this Government of loaves and fishes has more mischief in it than people have yet reflected on. The National Assembly has made the discovery, and it holds out the example to the world. Had Governments agreed to quarrel on purpose to fleece their countries by taxes, they could not have succeeded better than they have done.

Many things in the English Government appear to me the reverse of what they ought to be and what they are said to be. The Parliament, imperfectly and capriciously elected as it is, is nevertheless *supposed* to hold the national purse in *trust* for the nation; but in the manner in which an English Parliament is constructed it is like a man being both mortgager and mortgagee, and in the case of misapplication of trust it is the criminal sitting in judgment upon himself. If those who vote the supplies are the same persons who receive the supplies when voted, and are to account for the expenditure of those supplies to those who voted them, it is *themselves accountable to themselves*, and the Comedy of Errors concludes with the Pantomime of Hush. Neither the ministerial party nor the Opposition will touch upon this case. The national purse is the common hack which each mounts upon. It is like what the country people call "Ride and tie—You ride a little way, and then I." They order these things better in France.

The French Constitution says *that the right of war and peace is in the nation.*

Where else should it reside but in those who are to pay the expence?

In England this right is said to reside in a *metaphor* shown at the Tower for sixpence or a shilling a piece: so are the lions; and it would be a step nearer to reason to say it resided in them, for any inanimate metaphor is no more than a hat or a cap. We can all see the absurdity of worshipping Aaron's molten calf, or Nebuchadnezzar's golden image; but why do men continue to practise themselves the absurdities they despise in others?

It may with reason be said that in the manner the English Nation is represented it signifies not where this right resides, whether in the Crown or in the Parliament. War is the common harvest of all those who participate in the division and expenditure of public money, in all countries. It

is the art of *conquering at home*; the object of it is an increase of revenue; and as revenue cannot be increased without taxes, a pretence must be made for expenditures. In reviewing the history of the English Government, its wars and its taxes, a bystander, not blinded by prejudice nor warped by interest, would declare that taxes were not raised to carry on wars, but that wars were raised to carry on taxes.

Mr. Burke, as a member of the House of Commons, is a part of the English Government; and though he professes himself an enemy to war, he abuses the French Constitution, which seeks to explode it. He holds up the English Government as a model, in all its parts, to France; but he should first know the remarks which the French make upon it. They contend in favour of their own, that the portion of liberty enjoyed in England is just enough to enslave a country by more productively than by despotism, and that as the real object of all despotism is revenue, a Government so formed obtains more than it could do either by direct despotism, or in a full state of freedom, and is, therefore, on the ground of interest, opposed to both. They account also for the readiness which always appears in such Governments for engaging in wars by remarking on the different motives which produce them. In despotic Governments wars are the effect of pride; but in those Governments in which they become the means of taxation, they acquire thereby a more permanent promptitude.

The French Constitution, therefore, to provide against both these evils, has taken away the power of declaring war from kings and ministers, and placed the right where the expence must fall.

When the question of the right of war and peace was agitating in the National Assembly, the people of England appeared to be much interested in the event, and highly to applaud the decision. As a principle it applies as much to one country as another. William the Conqueror, *as a conqueror*, held this power of war and peace in himself, and his descendants have ever since claimed it under him as a right.

Although Mr. Burke has asserted the right of the Parliament at the Revolution to bind and control the Nation and posterity *for ever*, he denies at the same time that the Parliament or the nation had any right to alter what he calls the succession of the Crown in anything but in part, or by a sort of modification. By his taking this ground he throws the case back to the *Norman Conquest*, and by thus running a line of succession springing from William the Conqueror to the present day, he makes it necessary to inquire who and what William the Conqueror was, and where he came from, and into the origin, history and nature of what

are called prerogatives. Everything must have had a beginning, and the fog of time and antiquity should be penetrated to discover it. Let, then, Mr. Burke bring forward his William of Normandy, for it is to this origin that his argument goes. It also unfortunately happens, in running this line of succession, that another line parallel thereto presents itself, which is, that if the succession runs in the line of the conquest, the Nation runs in the line of being conquered, and it ought to rescue itself from this reproach.

But it will perhaps be said that tho' the power of declaring war descends in the heritage of the conquest, it is held in check by the right of the Parliament to withhold the supplies. It will always happen when a thing is originally wrong that amendments do not make it right, and it often happens that they do as much mischief one way as good the other, and such is the case here, for if the one rashly declares war as a matter of right, and the other peremptorily withholds the supplies as a matter of right, the remedy becomes as bad, or worse, than the disease. The one forces the Nation to a combat, and the other ties its hands; but the more probable issue is that the contest will end in a collusion between the parties, and be made a screen to both.

On this question of war, three things are to be considered. First, the right of declaring it; secondly, the expence of supporting it; thirdly, the mode of conducting it after it is declared. The French Constitution places the *right* where the *expence* must fall, and this union can be only in the Nation. The mode of conducting it after it is declared, it consigns to the executive department. Were this the case in all countries, we should hear but little more of wars.

Before I proceed to consider other parts of the French Constitution, and by way of relieving the fatigue of argument, I will introduce an anecdote which I had from Dr. Franklin.

While the Doctor resided in France as Minister from America during the war, he had numerous proposals made to him by projectors of every country and of every kind, who wished to go to the land that floweth with milk and honey, America; and among the rest, there was one who offered himself to be King. He introduced his proposal to the Doctor by letter, which is now in the hands of M. Beaumarchais, of Paris—stating first, that as the Americans had dismissed or sent away their King, that they would want another. Secondly, that himself was a Norman. Thirdly, that he was of a more ancient family than the Dukes of Normandy, and of a more honourable descent, his line having never been bastardised. Fourthly, that there was already a precedent in England of Kings com-

ing out of Normandy, and on these grounds he rested his offer, *enjoining* that the Doctor would forward it to America. But as the Doctor neither did this, nor yet sent him an answer, the projector wrote a second letter in which he did not, it is true, threaten to go over and conquer America, but only with great dignity proposed that if his offer was not accepted, an acknowledgment of about £30,000 might be made to him for his generosity! Now, as all arguments respecting succession must necessarily connect that succession with some beginning, Mr. Burke's arguments on this subject go to show that there is no English origin of Kings, and that they are descendants of the Norman line in right of the Conquest. It may, therefore, be of service to his doctrine to make this story known and to inform him, that in case of that natural extinction to which all mortality is subject, Kings may again be had from Normandy, on more reasonable terms than William the Conqueror; and consequently that the good people of England at the Revolution of 1688, *might have done much better*, had such a generous Norman as *this* known *their* wants, and they had known *his*! The chivalry character which Mr. Burke so much admires, is certainly much easier to make a bargain with than a *hard dealing Dutchman*. But to return to the matters of the Constitution.

The French Constitution says, *There shall be no titles*; and, of consequence, all that class of equivocal generation which in some countries is called "*aristocracy*" and in others "*nobility*," is done away, and the *peer* is exalted into MAN.

Titles are but nicknames, and every nickname is a title. The thing is perfectly harmless in itself, but it marks a sort of foppery in the human character, which degrades it. It reduces man into the diminutive of man in things which are great, and the counterfeit of woman in things which are little. It talks about its fine *blue ribbon* like a girl, and shows its new *garter* like a child. A certain writer, of some antiquity, says: "*When I was a child, I thought as a child; but when I became a man, I put away childish things.*"

It is, properly, from the elevated mind of France that the folly of titles has fallen. It has outgrown the baby cloaths of *Count* and *Duke*, and breeched itself in manhood. France has not levelled, it has exalted. It has put down the dwarf, to set up the man. The punyism of a senseless word like *Duke* or *Count* or *Earl* has ceased to please. Even those who possessed them have disowned the gibberish, and as they outgrew the rickets, have despised the rattle. The genuine mind of man, thirsting for its native home, society, contemns the gewgaws that separate him from it. Titles are like circles drawn by the magician's wand, to contract the

sphere of man's felicity. He lived immured within the Bastille of a word, and surveys at a distance the envied life of man.

Is it, then, any wonder that titles should fall in France? Is it not a greater wonder they should be kept up anywhere? What are they? What is their worth, and "what is their amount"?

When we think or speak of a *Judge* or a *General*, we associate with it the ideas of office and character; we think of gravity in the one and bravery in the other; but when we use a word *merely as a title*, no ideas associate with it. Through all the vocabulary of Adam there is not such an animal as a Duke or a Count; neither can we connect any certain idea with the words. Whether they mean strength or weakness, wisdom or folly, a child or a man, or the rider or the horse, is all equivocal. What respect then can be paid to that which describes nothing, and which means nothing? Imagination has given figure and character to centaurs, satyrs, and down to all the fairy tribe; but titles baffle even the powers of fancy, and are a chimerical nondescript.

But this is not all. If a whole country is disposed to hold them in contempt, all their value is gone, and none will own them. It is common opinion only that makes them anything or nothing, or worse than nothing. There is no occasion to take titles away, for they take themselves away when society concurs to ridicule them. This species of imaginary consequence has visibly declined in every part of Europe, and it hastens to its exit as the world of reason continues to rise. There was a time when the lowest class of what are called *nobility* was more thought of than the highest is now, and when a man in armour riding through Christendom in quest of adventures was more stared at than a modern Duke. The world has seen this folly fall, and it has fallen by being laughed at, and the farce of titles will follow its fate. The patriots of France have discovered in good time that rank and dignity in society must take a new ground. The old one has fallen through. It must now take the substantial ground of character, instead of chimerical ground of titles; and they have brought their titles to the altar, and made of them a burnt-offering to Reason.

If no mischief had annexed itself to the folly of titles they would not have been worth a serious and formal destruction, such as the National Assembly have decreed them; and this makes it necessary to inquire farther into the nature and character of Aristocracy.

That, then, which is called Aristocracy in some countries and Nobility in others arose out of the Governments founded upon conquest. It was originally a military order for the purpose of supporting military Govern-

ment (for such were all Governments founded in conquest); and to keep up a succession of this order for the purpose for which it was established, all the younger branches of those families were disinherited and the law of *primogenitureship* set up.

The nature and character of Aristocracy shows itself to us in this law. It is a law against every law of nature, and Nature herself calls for its destruction. Establish family justice and Aristocracy falls. By the aristocratical law of *primogenitureship*, in a family of six children five are exposed. Aristocracy has never more than one child. The rest are begotten to be devoured. They are thrown to the cannibal for prey, and the natural parent prepares the unnatural repast.

As everything which is out of nature in man affects, more or less, the interest of society, so does this. All the children which the Aristocracy disowns (which are all except the eldest) are, in general, cast like orphans on a parish, to be provided for by the public, but at a greater charge. Unnecessary offices and places in Governments and Courts are created at the expence of the public to maintain them.

With what kind of parental reflections can the father or mother contemplate their younger offspring? By Nature they are children, and by Marriage they are heirs; but by Aristocracy they are bastards and orphans. They are the flesh and blood of their parents in one line, and nothing akin to them in the other. To restore, therefore, parents to their children, and children to their parents—relations to each other, and man to society—and to exterminate the monster Aristocracy, root and branch—the French Constitution has destroyed the law of *PRIMOGENITURESHIP*. Here then lies the monster; and Mr. Burke, if he pleases, may write its epitaph.

Hitherto we have considered Aristocracy chiefly in one point of view. We have now to consider it in another. But whether we view it before or behind, or sideways, or any way else, domestically or publicly, it is still a monster.

In France Aristocracy had one feature less in its countenance than what it has in some other countries. It did not compose a body of hereditary legislators. It was not a "*Corporation of Aristocracy*," for such I have heard M. de la Fayette describe an English House of Peers. Let us then examine the grounds upon which the French Constitution has resolved against having such a House in France.

Because, in the first place, as is already mentioned, Aristocracy is kept up by family tyranny and injustice.

Secondly, because there is an unnatural unfitness in an Aristocracy

to be legislators for a Nation. Their ideas of *distributive justice* are corrupted at the very source. They begin life by trampling on all their younger brothers and sisters, and relations of every kind, and are taught and educated so to do. With what ideas of justice or honour can that man enter a house of legislation, who absorbs in his own person the inheritance of a whole family of children or doles out to them some pitiful portion with the insolence of a gift?

Thirdly, because the idea of hereditary legislators is as inconsistent as that of hereditary judges, or hereditary juries; and as absurd as an hereditary mathematician, or an hereditary wise man; and as ridiculous as an hereditary poet-laureate.

Fourthly, because a body of men, holding themselves accountable to nobody, ought not to be trusted by any body.

Fifthly, because it is continuing the uncivilised principle of Governments founded in conquest, and the base idea of man having property in man, and governing him by personal right.

Sixthly, because Aristocracy has a tendency to degenerate the human species. By the universal œconomy of nature it is known, and by the instance of the Jews it is proved, that the human species has a tendency to degenerate, in any small number of persons, when separated from the general stock of society, and inter-marrying constantly with each other. It defeats even its pretended end, and becomes in time the opposite of what is noble in man. Mr. Burke talks of nobility; let him show what it is. The greatest characters the world have known have risen on the democratic floor. Aristocracy has not been able to keep a proportionate pace with Democracy. The artificial NOBLE shrinks into a dwarf before the NOBLE of Nature; and in the few instances of those (for there are some in all countries) in whom nature, as by a miracle, has survived in Aristocracy, THOSE MEN DESPISE IT. But it is time to proceed to a new subject.

The French Constitution has reformed the condition of the clergy. It has raised the income of the lower and middle classes, and taken from the higher. None is now less than twelve hundred livres (fifty pounds sterling) nor any higher than about two or three thousand pounds. What will Mr. Burke place against this? Hear what he says. He says—

"That the people of England can see without pain or grudging, an archbishop precede a duke; they can see a Bishop of Durham, or a Bishop of Winchester in possession of £10,000 a-year; and cannot see why it is in worse hands than estates to the like amount, in the hands of this earl or that 'squire."

And Mr. Burke offers this as an example to France.

As to the first part, whether the Archbishop precedes the Duke, or the Duke the Bishop, it is, I believe, to the people in general, somewhat like *Sternhold* and *Hopkins*, or *Hopkins* and *Sternhold*; you may put which you please first; and as I confess that I do not understand the merits of this case, I will not contend it with Mr. Burke.

But with respect to the latter, I have something to say:—Mr. Burke has not put the case right. The comparison is out of order, by being put between the bishop and the earl or the 'squire. It ought to be put between the bishop and the curate, and then it will stand thus:—

"The people of England can see without pain or grudging, a Bishop of Durham, or a Bishop of Winchester, in possession of ten thousand pounds a-year, and a curate on thirty or forty pounds a-year, or less."

No, sir, they certainly do not see those things without great pain or grudging. It is a case that applies itself to every man's sense of justice, and is one among many that calls aloud for a Constitution.

In France the cry of "*the Church! the Church!*" was repeated as often as in Mr. Burke's book, and as loudly as when the Dissenters' Bill was before the English Parliament; but the generality of the French clergy were not to be deceived by this cry any longer. They knew that whatever the pretence might be it was themselves who were one of the principal objects of it. It was the cry of the high beneficed clergy, to prevent any regulation of income taking place between those of ten thousand pounds a-year and the parish priest. They therefore joined their case to those of every other oppressed class of men, and by this union obtained redress.

The French Constitution *has abolished Tythes*, that source of perpetual discontent between the tythe-holder and the parishioner. When land is held on tythe, it is in the condition of an estate held between two parties; the one receiving one-tenth, and the other nine-tenths of the produce: and consequently, on principles of equity, if the estate can be improved, and made to produce by that improvement double or treble what it did before, or in any other ratio, the expense of such improvement ought to be borne in like proportion between the parties who are to share the produce. But this is not the case in tythes; the farmer bears the whole expence, and the tythe-holder takes a tenth of the improvement, in addition to the original tenth, and by this means gets the value of two-tenths instead of one. This is another case that calls for a Constitution.

The French Constitution hath abolished or renounced *Toleration*

and *Intoleration* also, and hath established UNIVERSAL RIGHT OF CONSCIENCE.

Toleration is not the *opposite* of Intolerance, but is the *counterfeit* of it. Both are despotisms. The one assumes to itself the right of withholding Liberty of Conscience, and the other of granting it. The one is the Pope armed with fire and faggot, and the other is the Pope selling or granting indulgences. The former is Church and State, and the latter is Church and traffic.

But Toleration may be viewed in a much stronger light. Man worships not himself, but his Maker; and the liberty of conscience which he claims is not for the service of himself, but of his God. In this case, therefore, we must necessarily have the associated idea of two beings; the *mortal* who renders the worship, and the IMMORTAL BEING who is worshipped. Toleration, therefore, places itself, not between man and man, nor between Church and Church, nor between one denomination of religion and another, but between God and man; between the being who worships, and the BEING who is worshipped; and by the same act of assumed authority by which it tolerates man to pay his worship, it presumptuously and blasphemously sets itself up to tolerate the Almighty to receive it.

Were a Bill brought into any Parliament, entitled, "*An Act to tolerate or grant liberty to the Almighty to receive the worship of a Jew or a Turk,*" or "to prohibit the Almighty from receiving it," all men would startle and call it blasphemy. There would be an uproar. The presumption of toleration in religious matters would then present itself unmasked; but the presumption is not the less because the name of "Man" only appears to those laws, for the associated idea of the *worshipped* and the *worshipper* cannot be separated. Who then art thou, vain dust and ashes! by whatever name thou art called, whether a King, a Bishop, a Church, or a State, a Parliament, or anything else, that obtrudest thine insignificance between the soul of man and its maker? Mind thine own concerns. If he believes not as thou believest, it is a proof that thou believest not as he believeth, and there is no earthly power can determine between you.

With respect to what are called denominations of religion, if every one is left to judge of his own religion, there is no such thing as a religion that is wrong; but if they are to judge of each other's religion, there is no such thing as a religion that is right; and therefore all the world is right, or all the world is wrong. But with respect to religion itself, without regard to names, and as directing itself from the universal family of mankind to the Divine object of all adoration, *it is man bringing to his Maker the fruits of his heart*; and though those fruits may differ from each other

like the fruits of the earth, the grateful tribute of every one is accepted.

A Bishop of Durham, or a Bishop of Winchester, or the Archbishop who heads the Dukes, will not refuse a tythe-sheaf of wheat because it is not a cock of hay, nor a cock of hay because it is not a sheaf of wheat; nor a pig, because it is neither one nor the other; but these same persons, under the figure of an established church, will not permit their Maker to receive the varied tythes of man's devotion.

One of the continual choruses of Mr. Burke's book is "Church and State." He does not mean some one particular Church, or some one particular State, but any Church and State; and he uses the term as a general figure to hold forth the political doctrine of always uniting the Church with the State in every country, and he censures the National Assembly for not having done this in France. Let us bestow a few thoughts on this subject.

All religions are in their nature kind and benign, and united with principles of morality. They could not have made proselytes at first by professing anything that was vicious, cruel, persecuting, or immoral. Like everything else, they had their beginning; and they proceeded by persuasion, exhortation, and example. How then is it that they lose their native mildness, and become morose and intolerant?

It proceeds from the connection which Mr. Burke recommends. By engendering the Church with the State, a sort of mule-animal, capable only of destroying, and not of breeding up, is produced, called *The Church established by Law*. It is a stranger, even from its birth, to any parent mother, on whom it is begotten, and whom in time it kicks out and destroys.

The Inquisition in Spain does not proceed from the religion originally professed but from this mule-animal engendered between the Church and the State. The burnings in Smithfield proceeded from the same heterogeneous production; and it was the regeneration of this strange animal in England afterwards that renewed rancour and irreligion among the inhabitants, and that drove the people called Quakers and Dissenters to America. Persecution is not an original feature in *any* religion; but it is always the strongly-marked feature of all law-religions, or religions established by law. Take away the law-establishment and every religion reassumes its original benignity. In America a Catholic priest is a good citizen, a good character, and a good neighbour; an Episcopalian minister is of the same description; and this proceeds, independently of the men, from there being no law establishment in America.

If also we view this matter in a temporal sense we shall see the ill effects

it has had on the prosperity of nations. The union of Church and State has impoverished Spain. The revoking the Edict of Nantes drove the silk manufacture from France into England; and Church and State are driving the cotton manufacture from England to America and France. Let then Mr. Burke continue to preach his antipolitical doctrine of Church and State. It will do some good. The National Assembly will not follow his advice, but will benefit by his folly. It was by observing the ill effects of it in England, that America has been warned against it; and it is by experiencing them in France, that the National Assembly have abolished it, and, like America, have established UNIVERSAL RIGHT OF CONSCIENCE AND UNIVERSAL RIGHT OF CITIZENSHIP.

I will here cease the comparison with respect to the principles of the French Constitution, and conclude this part of the subject with a few observations on the organisation of the formal parts of the French and English Governments.

The executive power in each country is in the hands of a person stiled the King; but the French Constitution distinguishes between the King and the Sovereign. It considers the station of King as official, and places Sovereignty in the Nation.

The representatives of the Nation who compose the National Assembly, and who are the legislative power, originate in and from the people by election, as an inherent right in the people. In England it is otherwise; and this arises from the original establishment of what is called its monarchy; for as by the Conquest all the rights of the people or the Nation were absorbed into the hands of the Conqueror, and who added the title of King to that of Conqueror, those same matters which in France are now held as rights in the people, or in the Nation, are held in England as grants from what is called the Crown. The Parliament in England, in both its branches, was erected by patents from the descendants of the Conqueror. The House of Commons did not originate as a matter of right in the people to delegate or elect, but as a grant or boon.

By the French Constitution the Nation is always named before the King. The third article of the Declaration of Rights says: "*The Nation is essentially the source (or fountain) of all sovereignty.*" Mr. Burke argues that in England a King is the fountain—that he is the fountain of all honour. But as this idea is evidently descended from the Conquest I shall make no other remark upon it, than that it is the nature of conquest to turn everything upside down; and as Mr. Burke will not be refused the privilege of speaking twice, and as there are but two parts in the figure, the *fountain* and the *spout*, he will be right the second time.

The French Constitution puts the legislative before the executive, the Law before the King; *la Loi, le Roi*. This also is in the natural order of things, because laws must have existence before they can have execution.

A King in France does not, in addressing himself to the National Assembly, say "My Assembly," similar to the phrase used in England of "*my* Parliament"; neither can he use it consistently with the Constitution, nor could it be admitted. There may be propriety in the use of it in England, because as is before mentioned, both Houses of Parliament originated from what is called the Crown by patent or boon—and not from the inherent rights of the people, as the National Assembly does in France, and whose name designates its origin.

The President of the National Assembly does not ask the King *to grant to the Assembly liberty of speech*, as is the case with the English House of Commons. The constitutional dignity of the National Assembly cannot debase itself. Speech is, in the first place, one of the natural rights of man always retained; and with respect to the National Assembly the use of it is their *duty*, and the nation is their *authority*. They were elected by the greatest body of men exercising the right of election the European world ever saw. They sprung not from the filth of rotten boroughs, nor are they the vassal representatives of aristocratical ones. Feeling the proper dignity of their character, they support it. Their parliamentary language, whether for or against the question, is free, bold and manly, and extends to all the parts and circumstances of the case. If any matter or subject respecting the executive department or the person who presides in it (the King) comes before them it is debated on with the spirit of men, and the language of gentlemen; and their answer or their address is returned in the same stile. They stand not aloof with the gaping vacuity of vulgar ignorance, nor bend with the cringe of sycophantic insignificance. The graceful pride of truth knows no extremes, and preserves, in every latitude of life, the right-angled character of man.

Let us now look to the other side of the question. In the addresses of the English Parliaments to their Kings we see neither the intrepid spirit of the old Parliaments of France, nor the serene dignity of the present National Assembly; neither do we see in them anything of the style of English manners, which borders somewhat on bluntness. Since then they are neither of foreign extraction, nor naturally of English production, their origin must be sought for elsewhere, and that origin is the Norman Conquest. They are evidently of the vassalage class of manners, and emphatically mark the prostrate distance that exists in no other condition of men than between the conqueror and the conquered. That this vassal-

age idea and stile of speaking was not got rid of even at the Revolution of 1688, is evident from the declaration of Parliament to William and Mary in these words: "We do most humbly and faithfully *submit* ourselves, our heirs and posterities, for ever." Submission is wholly a vassalage term, repugnant to the dignity of freedom, and an echo of the language used at the Conquest.

As the estimation of all things is by comparison, the Revolution of 1688, however from circumstances it may have been exalted beyond its value, will find its level. It is already on the wane, eclipsed by the enlarging orb of reason, and the luminous Revolutions of America and France. In less than another century it will go, as well as Mr. Burke's labours, "to the family vault of all the Capulets." Mankind will then scarcely believe that a country calling itself free would send to Holland for a man, and cloath him with power on purpose to put themselves in fear of him, and give him almost a million sterling a year for leave to *submit* themselves and their posterity, like bondmen and bondwomen, for ever.

But there is a truth that ought to be made known: I have had the opportunity of seeing it; which is, *that notwithstanding appearances, there is not any description of men that despise monarchy so much as courtiers.* But they well know, that if it were seen by others, as it is seen by them, the juggle could not be kept up. They are in the condition of men who get their living by a show, and to whom the folly of that show is so familiar that they ridicule it; but were the audience to be made as wise in this respect as themselves, there would be an end to the show and the profits with it. The difference between a republican and a courtier with respect to monarchy, is that the one opposes monarchy, believing it to be something; and the other laughs at it, knowing it to be nothing.

As I used sometimes to correspond with Mr. Burke believing him then to be a man of sounder principles than his book shows him to be, I wrote to him last winter from Paris, and gave him an account how prosperously matters were going on. Among other subjects in that letter, I referred to the happy situation the National Assembly were placed in; that they had taken a ground on which their moral duty and their political interest were united. They have not to hold out a language which they do not themselves believe, for the fraudulent purpose of making others believe it. Their station requires no artifice to support it, and can only be maintained by enlightening mankind. It is not their interest to cherish ignorance, but to dispel it. They are not in the case of a ministerial or an opposition party in England, who, though they are opposed, are still

united to keep up the common mystery. The National Assembly must throw open a magazine of light. It must show man the proper character of man; and the nearer it can bring him to that standard, the stronger the National Assembly becomes.

In contemplating the French Constitution, we see in it a rational order of things. The principles harmonize with the forms, and both with their origin. It may perhaps be said as an excuse for bad forms, that they are nothing more than forms; but this is a mistake. Forms grow out of principles, and operate to continue the principles they grow from. It is impossible to practise a bad form on anything but a bad principle. It cannot be ingrafted on a good one; and wherever the forms in any government are bad, it is a certain indication that the principles are bad also.

I will here finally close this subject. I began it by remarking that Mr. Burke had *voluntarily* declined going into a comparison of the English and French Constitutions. He apologises for not doing it, by saying that he had not time. Mr. Burke's book was upwards of eight months in hand, and is extended to a volume of three hundred and sixty-six pages. As his omission does injury to his cause, his apology makes it worse; and men on the English side of the water will begin to consider, whether there is not some radical defect in what is called the English Constitution, that made it necessary for Mr. Burke to suppress the comparison, to avoid bringing it into view.

As Mr. Burke has not written on Constitutions so neither has he written on the French Revolution. He gives no account of its commencement or its progress. He only expresses his wonder. "It looks," says he, "to me, as if I were in a great crisis, not of the affairs of France alone, but of all Europe, perhaps of more than Europe. All circumstances taken together, the French Revolution is the most astonishing that has hitherto happened in the world."

As wise men are astonished at foolish things, and other people at wise ones, I know not on which ground to account for Mr. Burke's astonishment; but certain it is, that he does not understand the French Revolution. It has apparently burst forth like a creation from a chaos, but it is no more the consequence of a mental Revolution priorily existing in France. The mind of the Nation had changed beforehand, and the new order of things has naturally followed the new order of thoughts. I will here, as concisely as I can, trace out the growth of the French Revolution, and mark the circumstances that have contributed to produce it.

The despotism of Louis XIV., united with the gaiety of his Court, and the gaudy ostentation of his character had so humbled, and at the same

time so fascinated the mind of France, that the people appear to have lost all sense of their own dignity, in contemplating that of their Grand Monarch; and the whole reign of Louis XV., remarkable only for weakness and effeminacy, made no other alteration than that of spreading a sort of lethargy over the nation, from which it showed no disposition to rise.

The only signs which appeared of the spirit of Liberty during those periods, are to be found in the writings of the French philosophers. Montesquieu, President of the Parliament of Bordeaux, went as far as a writer under a despotic Government could well proceed; and being obliged to divide himself between principle and prudence, his mind often appears under a veil, and we ought to give him credit for more than he has expressed.

Voltaire, who was both the flatterer and the satirist of despotism, took another line. His forte lay in exposing and ridiculing the superstitions which priestcraft, united with statecraft, had interwoven with Governments. It was not from the purity of his principles, or his love of mankind (for satire and philanthropy are not naturally concordant), but from his strong capacity of seeing folly in its true shape, and his irresistible propensity to expose it, that he made those attacks. They were, however, as formidable as if the motives had been virtuous; and he merits the thanks rather than the esteem of mankind.

On the contrary, we find in the writings of Rousseau, and the Abbé Raynal, a loveliness of sentiment in favour of liberty, that excites respect, and elevates the human faculties; but having raised this animation, they do not direct its operations, and leave the mind in love with an object, without describing the means of possessing it.

The writings of Quesnay, Turgot, and the friends of those authors, are of the serious kind; but they laboured under the same disadvantage with Montesquieu; their writings abound with moral maxims of Government, but are rather directed to œconomise and reform the administration of the Government, than the Government itself.

But all those writings and many others had their weight; and by the different manner in which they treated the subject of Government, Montesquieu by his judgment and knowledge of laws, Voltaire by his wit, Rousseau and Raynal by their animation, and Quesnay and Turgot by their moral maxims and systems of œconomy, readers of every class met with something to their taste, and a spirit of political inquiry began to diffuse itself through the Nation at the time the dispute between England the then colonies of America broke out.

In the war which France afterwards engaged in, it is very well known that the nation appeared to be beforehand with the French ministry. Each of them had its view: but those views were directed to different objects; the one sought liberty, and the other retaliation on England. The French officers and soldiers, who after this went to America, were eventually placed in the school of Freedom, and learned the practice as well as the principles of it by heart.

As it was impossible to separate the military events which took place in America from the principles of the American Revolution, the publication of those events in France necessarily connected themselves with the principles which produced them. Many of the facts were in themselves principles; such as the Declaration of American Independence, and the treaty of alliance between France and America, which recognised the natural right of man, and justified resistance to oppression. The then Minister of France, Count Vergennes, was not the friend of America; and it is both justice and gratitude to say, that it was the Queen of France who gave the cause of America a fashion at the French Court. Count Vergennes was the personal and social friend of Dr. Franklin; and the Doctor had obtained, by his sensible gracefulness, a sort of influence over him; but with respect to principles Count Vergennes was a despot.

The situation of Dr. Franklin, as Minister from America to France, should be taken into the chain of circumstances. The diplomatic character is of itself the narrowest sphere of society that man can act in. It forbids intercourse by the reciprocity of suspicion; and a diplomatic is a sort of unconnected atom, continually repelling and repelled. But this was not the case with Dr. Franklin. He was not the diplomatic of a Court, but of MAN. His character as a philosopher had been long established, and his circle of society in France was universal. Count Vergennes resisted for a considerable time the publication in France of the American Constitutions, translated into the French language: but even in this he was obliged to give way to public opinion, and a sort of propriety in admitting to appear what he had undertaken to defend. The American Constitutions were to Liberty what a grammar is to language: they define its parts of speech, and practically construct them into syntax. The peculiar situation of the then Marquis de la Fayette is another link in the great chain. He served in America as an American officer under a commission of Congress, and by the universality of his acquaintance was in close friendship with the civil government of America, as well as with the military line. He spoke the language of the country, entered into the dis-

cussions on the principles of Government, and was always a welcome friend at any election.

When the war closed, a vast reinforcement to the cause of Liberty spread itself over France, by the return of the French officers and soldiers. A knowledge of the practice was then joined to the theory; and all that was wanting to give it real existence was opportunity. Man cannot, properly speaking, make circumstances for his purpose, but he always has it in his power to improve them when they occur, and this was the case in France.

M. Neckar was displaced in May, 1781; and by the ill-management of the finances afterwards, and particularly during the extravagant administration of M. Calonne, the revenue of France, which was nearly twenty-four millions sterling per year, was become unequal to the expenditure, not because the revenue had decreased, but because the expences had increased; and this was a circumstance which the Nation laid hold of to bring forward a Revolution. The English Minister, Mr. Pitt, has frequently alluded to the state of the French finances in his budgets, without understanding the subject. Had the French Parliaments been as ready to register edicts for new taxes as an English Parliament is to grant them, there had been no derangement in the finances, nor yet any Revolution; but this will better explain itself as I proceed. It will be necessary here to show how taxes were formerly raised in France. The King, or rather the Court or Ministry acting under the use of that name, framed the edicts for taxes at their own discretion, and sent them to the Parliaments to be registered; for until they were registered by the Parliaments they were not operative. Disputes had long existed between the Court and the Parliaments with respect to the extent of the Parliaments' authority on this head. The Court insisted that the authority of Parliaments went no farther than to remonstrate or show reasons against the tax, reserving to itself the right of determining whether the reasons were well or ill-founded; and in consequence thereof, either to withdraw the edict as a matter of choice, or to *order* it to be enregistered as a matter of authority. The Parliaments on their part insisted that they had not only a right to remonstrate, but to reject; and on this ground they were always supported by the Nation. But to return to the order of my narrative M. Calonne wanted money: and as he knew the sturdy disposition of the Parliaments with respect to new taxes, he ingeniously sought either to approach them by a more gentle means than that of direct authority, or to get over their heads by a manœuvre; and for this purpose he revived the project of assembling a body of men from the several provinces, un-

der the style of an "Assembly of the Notables," or men of note, who met in 1787, and who were either to recommend taxes to the Parliaments, or to act as a Parliament themselves. An assembly under this name had been called in 1617.

As we are to view this as the first practical step towards the Revolution, it will be proper to enter into some particulars respecting it. The Assembly of the Notables has in some places been mistaken for the States-General, but was wholly a different body, the States-General being always by election. The persons who composed the Assembly of the Notables were all nominated by the King, and consisted of one hundred and forty members. But as M. Calonne could not depend upon a majority of this Assembly in his favour, he very ingeniously arranged them in such a manner as to make forty-four a majority of one hundred and forty; to effect this he disposed of them into seven separate committees, of twenty members each. Every general question was to be decided, not by a majority of persons, but by a majority of committees; and as eleven votes would make a majority in a committee, and four committees a majority of seven, M. Calonne, had good reason to conclude that as forty-four would determine any general question he could not be outvoted. But all his plans deceived him, and in the event became his overthrow. The then Marquis de la Fayette was placed in the second committee, of which the Count D'Artois was president, and as money matters were the object, it naturally brought into view every circumstance connected with it. M. de la Fayette made a verbal charge against Calonne for selling crown lands to the amount of two millions of livres, in a manner that appeared to be unknown to the King. The Count D'Artois (as if to intimidate, for the Bastille was then in being) asked the Marquis if he would render the charge in writing? He replied that he would. The Count D'Artois did not demand it, but brought a message from the King to that purport. M. de la Fayette then delivered in his charge in writing, to be given to the King, undertaking to support it. No farther proceedings were had upon this affair, but M. Calonne was soon after dismissed by the King and sent off to England.

As M. de la Fayette, from the experience of what he had seen in America, was better acquainted with the science of civil Government than the generality of the members who composed the Assembly of the Notables could then be, the brunt of the business fell considerably to his share. The plan of those who had a Constitution in view was to contend with the Court on the ground of taxes, and some of them openly professed their object. Disputes frequently arose between Count D'Artois and M. de la

Fayette upon various subjects. With respect to the arrears already incurred the latter proposed to remedy them by accommodating the expences to the revenue instead of the revenue to the expences; and as objects of reform he proposed to abolish the Bastille and all the State prisons throughout the Nation (the keeping of which was attended with great expense), and to suppress *lettres de cachet*; but those matters were not then much attended to, and with respect to *lettres de cachet*, a majority of the nobles appeared to be in favour of them.

On the subject of supplying the Treasury by new taxes the Assembly declined taking the matter on themselves, concurring in the opinion that they had not authority. In a debate on this subject M. de la Fayette said that raising money by taxes could only be done by a National Assembly, freely elected by the people, and acting as their representatives. Do you mean, said the Count D'Artois, the *States-General*? M. de la Fayette replied that he did. Will you, said the Count D'Artois, sign what you say to be given to the King? The other replied that he would not only do this but that he would go farther, and say that the effectual mode would be for the King to agree to the establishment of a Constitution.

As one of the plans had thus failed, that of getting the Assembly to act as a Parliament, the other came into view, that of recommending. On this subject the Assembly agreed to recommend two new taxes to be enregistered by the Parliament: the one a stamp-tax and the other a territorial or sort of land-tax. The two have been estimated at about five millions sterling per annum. We have now to turn our attention to the Parliaments, on whom the business was again devolving.

The Archbishop of Toulouse (since Archbishop of Sens, and now a Cardinal) was appointed to the administration of the finances soon after the dismissal of Calonne. He was also made Prime Minister, an office that did not always exist in France. When this office did not exist, the chiefs of the principal departments transacted business immediately with the King, but when a Prime Minister was appointed they did business only with him. The Archbishop arrived to more state-authority than any Minister since the Dukè de Choiseul, and the Nation was strongly disposed in his favour; but by a line of conduct scarcely to be accounted for he perverted every opportunity, turned out a despot, and sunk into disgrace, and a Cardinal.

The Assembly of the Notables having broken up, the new Minister sent the edicts for the two taxes recommended by the Assembly to the Parliaments to be enregistered. They of course came first before the Parliament of Paris, who returned for answer, *That with such a revenue as the na-*

tion then supported the name of taxes ought not to be mentioned but for the purpose of reducing them, and threw both the edicts out.

On this refusal the Parliament was ordered to Versailles, where, in the usual form, the King held what under the old Government was called a Bed of Justice; and the two edicts were enregistered in presence of the Parliament by an order of State.

On this the Parliament immediately returned to Paris, renewed their session in form, and ordered the enregistering to be struck out, declaring that everything done at Versailles was illegal. All the members of the Parliament were then served with *Lettres de Cachet*, and exiled to Trois; but as they continued as inflexible in exile as before, and as vengeance did not supply the place of taxes, they were after a short time recalled to Paris.

The edicts were again tendered to them, and the Count D'Artois undertook to act as representative of the King. For this purpose he came from Versailles to Paris, in a train of procession; and the Parliament were assembled to receive him. But show and parade had lost their influence in France; and whatever ideas of importance he might set off with, he had to return with those of mortification and disappointment. On alighting from his carriage to ascend the steps of the Parliament House, the crowd (which was numerously collected) threw out trite expressions saying: "This is Monsieur D'Artois, who wants more of our money to spend." The marked disapprobation which he saw impressed him with apprehensions, and the word *Aux armes!* (*To arms!*) was given out by the officer of the guard who attended him. It was so loudly vociferated, that it echoed through the avenues of the House, and produced a temporary confusion. I was then standing in one of the apartments through which he had to pass, and could not avoid reflecting how wretched was the condition of a disrespected man.

He endeavoured to impress the Parliament by great words, and opened his authority by saying, "The King, our Lord and Master." The Parliament received him very coolly and with their usual determination not to register the taxes; and in this manner the interview ended.

After this a new subject took place: In the various debates and contests which arose between the Court and the Parliaments on the subject of taxes, the Parliament of Paris at last declared that although it had been customary for Parliaments to enregister edicts for taxes as a matter of convenience, the right belonged only to the *States-General*; and that, therefore, the Parliament could go longer with propriety continue to debate on what it had not authority to act. The King after this came to

Paris and held a meeting with the Parliament, in which he continued from ten in the morning till about six in the evening, and, in a manner that appeared to proceed from him as if unconsulted upon with the Cabinet or Ministry, gave his word to the Parliament that the States-General should be convened.

But after this another scene arose, on a ground different from all the former. The Minister and the Cabinet were averse to calling the States-General. They well knew that if the States-General were assembled, themselves must fall; and as the King had not mentioned *any time*, they hit on a project calculated to elude, without appearing to oppose.

For this purpose, the Court set about making a sort of Constitution itself. It was principally the work of M. Lamoignon, Keeper of the Seals, who afterwards shot himself. This new arrangement consisted in establishing a body under the name of a *Cour Plénière*, or full Court, in which were invested all the powers that the Government might have occasion to make use of. The persons composing this Court were to be nominated by the King. The contended right of taxation was given up on the part of the King, and a new criminal code of laws and law proceedings was substituted in the room of the former. The thing, in many points, contained better principles than those upon which the Government had hitherto been administered; but with respect to the *Cour Plénière*, it was no other than a medium through which despotism was to pass, without appearing to act directly from itself.

The Cabinet had high expectations from their new contrivance. The persons who were to compose the *Cour Plénière* were already nominated; and as it was necessary to carry a fair appearance, many of the best characters in the Nation were appointed among the number. It was to commence on the 8th of May, 1788; but an opposition arose to it on two grounds—the one as to principle, the other as to form.

On the ground of principle it was contended that Government had not a right to alter itself, and that if the practice was once admitted it would grow into a principle and be made a precedent for any future alterations the Government might wish to establish; that the right of altering the Government was a national right, and not a right of Government. And on the ground of form it was contended that the *Cour Plénière* was nothing more than a larger Cabinet.

The then Duke de la Rouchefoucault, Luxembourg, De Noailles, and many others, refused to accept the nomination, and strenuously opposed the whole plan. When the edict for establishing this new Court was sent to the Parliaments to be enregistered and put into execution, they resisted

also. The Parliament of Paris not only refused, but denied the authority; and the contest renewed itself between the Parliament and the Cabinet more strongly than ever. While the Parliament were sitting in debate on this subject, the Ministry ordered a regiment of soldiers to surround the House and form a blockade. The members sent out for beds and provisions, and lived as in a besieged citadel; and as this had no effect, the commanding officer was ordered to enter the Parliament House and seize them, which he did, and some of the principal members were shut up in different prisons. About the same time a deputation of persons arrived from the province of Brittany to remonstrate against the establishment of the *Cour Plénière*, and those the Archbishop sent to the Bastille. But the spirit of the Nation was not to be overcome, and it was so fully sensible of the strong ground it had taken, that of withholding taxes, that it contented itself with keeping up a sort of quiet resistance, which effectually overthrew all the plans at that time formed against it. The project of the *Cour Plénière* was at last obliged to be given up, and the Prime Minister not long afterwards followed its fate, and M. Neckar was recalled into office.

The attempt to establish the *Cour Plénière* had an effect upon the Nation which itself did not perceive. It was a sort of new form of Government that insensibly served to put the old one out of sight and to unhinge it from the superstitious authority of antiquity. It was Government dethroning Government; and the old one, by attempting to make a new one, made a chasm.

The failure of this scheme renewed the subject of convening the States-General; and this gave rise to a new series of politics.

There was no settled form for convening the States-General; all that it positively meant was a deputation from what was then called the Clergy, the Noblesse, and the Commons; but their numbers or their proportions had not been always the same. They had been convened only on extraordinary occasions, the last of which was in 1614; their numbers were then in equal proportions, and they voted by orders.

It could not well escape the sagacity of M. Neckar, that the mode of 1614 would answer neither the purpose of the then Government nor of the Nation. As matters were at that time circumstanced it would have been too contentious to agree upon anything. The debates would have been endless upon privileges and exemptions, in which neither the wants of the Government nor the wishes of the Nation for a Constitution would have been attended to. But as he did not choose to take the decision upon himself, he summoned again the *Assembly of the Notables* and referred

it to them. This body was in general interested in the decision, being chiefly of the Aristocracy and the high-paid Clergy, and they decided in favour of the mode of 1614. This decision was against the sense of the Nation, and also against the wishes of the Court; for the Aristocracy opposed itself to both and contended for privileges independent of either. The subject was then taken up by the Parliament, who recommended that the number of the Commons should be equal to the other two: and they should all sit in one house and vote in one body. The number finally determined on was 1200; 600 to be chosen by the Commons (and this was less than their proportion ought to have been when their worth and consequence is considered on a national scale), 300 by the Clergy, and 300 by the Aristocracy; but with respect to the mode of assembling themselves, whether together or apart, or the manner in which they should vote, these matters were referred.

The election that followed was not a contested election, but an animated one. The candidates were not men, but principles. Societies were formed in Paris, and committees of correspondence and communication established throughout the Nation, for the purpose of enlightening the people, and explaining to them the principles of civil Government; and so orderly was the election conducted, that it did not give rise even to the rumour of tumult.

The States-General were to meet at Versailles in April, 1789, but did not assemble till May. They situated themselves in three separate chambers, or rather the Clergy and the Aristocracy withdrew each into a separate chamber.

The majority of the Aristocracy claimed what they called the privilege of voting as a separate body, and of giving their consent or their negative in that manner; and many of the Bishops and the high-beneficed Clergy claimed the same privilege on the part of their Order.

The *Tiers Etat* (as they were then called) disowned any knowledge of artificial Orders and artificial privileges; and they were not only resolute on this point, but somewhat disdainful. They began to consider Aristocracy as a kind of fungus growing out of the corruption of society, that could not be admitted even as a branch of it; and from the disposition the Aristocracy had shown by upholding *Lettres de Cachet* and in sundry other instances, it was manifest that no Constitution could be formed by admitting men in any other character than as National Men.

After various altercations on this head, the *Tiers Etat* or Commons (as they were then called) declared themselves (on a motion made for

that purpose by the Abbé Sieyès) "THE REPRESENTATIVES OF THE NATION; and that the two Orders could be considered but as deputies of corporations, and could only have a deliberative voice when they assembled in a national character with the national representatives."

This proceeding extinguished the stile of *Etats Généraux*, or States-General, and erected it into the stile it now bears, that of *L'Assemblée Nationale*, or National Assembly.

This motion was not made in a precipitate manner. It was the result of cool deliberation, and concerted between the national representatives and the patriotic members of the two chambers, who saw into the folly, mischief and injustice of artificial privileged distinctions.

It was become evident, that no Constitution, worthy of being called by that name, could be established on anything less than a national ground. The Aristocracy had hitherto opposed the despotism of the Court, and affected the language of patriotism; but it opposed it as its rival (as the English Barons opposed King John), and it now opposed the nation from the same motives.

On carrying this motion, the national representatives, as had been concerted, sent an invitation to the two chambers, to unite with them in a National character, and proceed to business.

A majority of the Clergy, chiefly of the parish priests, withdrew from the clerical chamber, and joined the Nation; and forty-five from the other chamber joined in like manner.

There is a sort of secret history belonging to this last circumstance, which is necessary to its explanation; it was not judged prudent that all the patriotic members of the chamber stiling itself the Nobles, should quit it at once; and in consequence of this arrangement, they drew off by degrees, always leaving some, as well to reason the case, as to watch the suspected.

In a little time the numbers increased from forty-five to eighty, and soon after to a greater number; which, with the majority of the clergy, and the whole of the national representatives, put the malcontents in a very diminutive condition.

The King, who, very different from the general class called by that name, is a man of a good heart, showed himself disposed to recommend a union of the three chambers, on the ground the National Assembly had taken; but the malcontents exerted themselves to prevent it, and began now to have another project in view.

Their numbers consisted of a majority of the aristocratical chamber

and a minority of the clerical chamber, chiefly of Bishops and high-beneficed Clergy; and these men were determined to put everything to issue, as well by strength as by stratagem.

They had no objection to a Constitution; but it must be such a one as themselves should dictate, and suited to their own views and particular situations.

On the other hand, the Nation disowned knowing anything of them but as citizens, and was determined to shut out all such upstart pretensions. The more Aristocracy appeared, the more it was despised; there was a visible imbecility and want of intellects in the majority—a sort of *je ne sais quoi*, that while it affected to be more than citizen, was less than man. It lost ground from contempt more than from hatred; and was rather jeered at as an ass than dreaded as a lion. This is the general character of Aristocracy, or what are called Nobles or Nobility, or rather No-ability, in all countries.

The plan of the malcontents consisted now of two things; either to deliberate and vote by chambers (or orders), more especially on all questions respecting a Constitution (by which the aristocratical chamber would have had a negative on any article of the Constitution); or, in case they could not accomplish this object, to overthrow the National Assembly entirely.

To effect one or other of these objects they began now to cultivate a friendship with the despotism they had hitherto attempted to rival, and the Count D'Artois became their chief.

The King (who has since declared himself deceived into their measures) held, according to the old form, a *Bed of Justice*, in which he accorded to the deliberation and vote *par tête* (by head) upon several subjects; but reserved the deliberation and vote upon all questions respecting a Constitution to the three chambers separately.

This declaration of the King was made against the advice of M. Neckar, who now began to perceive that he was growing out of fashion at Court, and that another Minister was in contemplation.

As the form of sitting in separate chambers was yet apparently kept up, though essentially destroyed, the national representatives immediately after this declaration of the King resorted to their own chambers to consult on a protest against it; and the minority of the chamber (calling itself the Nobles), who had joined the national cause, retired to a private house to consult in like manner.

The malcontents had by this time concerted their measures with the Court, which Count D'Artois undertook to conduct; and as they saw

from the discontent which the declaration excited, and the opposition making against it, that they could not obtain a control over the intended Constitution by a separate vote, they prepared themselves for their final object—that of conspiring against the National Assembly, and overthrowing it.

The next morning the door of the chamber of the National Assembly was shut against them, and guarded by troops; and the members were refused admittance. On this they withdrew to a tennis-ground in the neighbourhood of Versailles, as the most convenient place they could find, and, after renewing their session, took an oath never to separate from each other, under any circumstance whatever, death excepted, until they had established a Constitution. As the experiment of shutting up the house had no other effect than that of producing a closer connection in the members, it was opened again the next day, and the public business recommenced in the usual place.

We now are to have in view the forming of the new Ministry, which was to accomplish the overthrow of the National Assembly. But as force would be necessary, orders were issued to assemble thirty thousand troops, the command of which was given to Broglio, one of the new-intended Ministry, who was recalled from the country for this purpose. But as some management was necessary to keep this plan concealed till the moment it should be ready for execution, it is to this policy that a declaration made by Count D'Artois must be attributed, and which is here proper to be introduced.

It could not but occur, while the malcontents continued to resort to their chambers separate from the National Assembly, that more jealousy would be excited than if they were mixed with it, and that the plot might be suspected. But as they had taken their ground, and wanted a pretence for quitting it, it was necessary that one should be devised. This was effectually accomplished by a declaration made by the Count D'Artois: "That if they took not a part in the National Assembly, the life of the King would be endangered;" on which they quitted their chambers, and mixed with the Assembly, in one body.

At the time this declaration was made, it was generally treated as a piece of absurdity in Count D'Artois, and calculated merely to relieve the outstanding members of the two chambers from the diminutive situation they were put in; and if nothing more had followed, this conclusion would have been good. But as things best explain themselves by their events, this apparent union was only a cover to the machinations which were secretly going on; and the declaration accommodated itself to an-

swer that purpose. In a little time the National Assembly found itself surrounded by troops, and thousands more were daily arriving. On this a very strong declaration was made by the National Assembly to the King, remonstrating on the impropriety of the measure, and demanding the reason. The King, who was not in the secret of this business, as himself afterwards declared, gave substantially for answer, that he had no other object in view than to preserve the public tranquillity, which appeared to be much disturbed.

But in a few days from this time the plot unravelled itself. M. Neckar and the Ministry were displaced, and a new one formed of the enemies of the Revolution; and Broglio, with between twenty-five and thirty thousand foreign troops, was arrived to support them. The mask was now thrown off, and matters were come to a crisis. The event was that in a space of three days the new Ministry and their abettors found it prudent to fly the Nation; the Bastille was taken, and Broglio and his foreign troops dispersed, as is already related in the former part of this work.

There are some curious circumstances in the history of this short-lived Ministry, and this short-lived attempt at a counter-revolution. The Palace of Versailles, where the Court was sitting, was not more than four hundred yards distant from the hall where the National Assembly was sitting. The two places were at this moment like the separate headquarters of two combatant armies; yet the Court was as perfectly ignorant of the information which had arrived from Paris to the National Assembly, as if it had resided at a hundred miles distance. The then Marquis de la Fayette, who (as has been already mentioned) was chosen to preside in the National Assembly on this particular occasion, named by order of the Assembly three successive deputations to the King, on the day and up to the evening on which the Bastille was taken, to inform and confer with him on the state of affairs; but the Ministry, who knew not so much as that it was attacked, precluded all communication, and were solacing themselves how dexterously they had succeeded; but in a few hours the accounts arrived so thick and fast that they had to start from their desks and run. Some set off in one disguise, and some in another, and none in their own character. Their anxiety now was to outride the news, lest they should be stopped, which, though it flew fast, flew not so fast as themselves.

It is worth relating that the National Assembly neither pursued those fugitive conspirators, nor took any notice of them, nor sought to retaliate in any shape whatever.

Occupied with establishing a Constitution founded on the Rights of

Man and the Authority of the People, the only authority on which Government has a right to exist in any country, the National Assembly felt none of those mean passions which mark the character of impertinent Governments, founding themselves on their own authority, or on the absurdity of hereditary succession. It is the faculty of the human mind to become what it contemplates, and to act in unison with its object.

The conspiracy being thus dispersed, one of the first works of the National Assembly, instead of vindictive proclamations, as has been the case with other Governments, published a Declaration of the Rights of Man, as the basis on which the new Constitution was to be built, and which is here subjoined.

DECLARATION OF THE RIGHTS OF MAN AND OF CITIZENS

BY THE NATIONAL ASSEMBLY OF FRANCE

THE representatives of the people of France, formed into a National Assembly, considering that ignorance, neglect, or contempt of human rights, are the sole causes of public misfortunes and corruptions of Government, have resolved to set forth in a solemn declaration, these natural, imprescriptible, and inalienable rights; that this declaration being constantly present to the minds of the members of the body social, they may be ever kept attentive to their rights and their duties; that the acts of the legislative and executive powers of Government, being capable of being every moment compared with the end of political institutions, may be more respected; and also, that the future claims of the citizens, being directed by simple and incontestable principles, may always tend to the maintenance of the Constitution, and the general happiness.

For these reasons the National Assembly doth recognise and declare, in the presence of the Supreme Being, and with the hope of his blessing and favour, the following *sacred* rights of men and of citizens:

I. Men are born, and always continue, free and equal in respect of their rights. Civil distinctions, therefore, can be founded only on public utility.

II. The end of all political associations is the preservation of the natural and imprescriptible rights of man; and these rights are Liberty, Property, Security, and Resistance of Oppression.

III. The Nation is essentially the source of all sovereignty; nor can any individual, or any body of men, be entitled to any authority which is not expressly derived from it.

IV. Political Liberty consists in the power of doing whatever does not injure another. The exercise of the natural rights of every man, has no other limits than those which are necessary to secure to every *other* man the free exercise of the same rights; and these limits are determinable only by the law.

V. The law ought to prohibit only actions hurtful to society. What is not prohibited by the law should not be hindered; nor should any one be compelled to that which the law does not require.

VI. The law is an expression of the will of the community. All citizens have a right to concur, either personally or by their representatives, in its formation. It should be the same to all, whether it protects or punishes; and all being equal in its sight, are equally eligible to all honours, places, and employments, according to their different abilities, without any other distinction than that created by their virtues and talents.

VII. No man should be accused, arrested, or held in confinement, except in cases determined by the law, and according to the forms which it has prescribed. All who promote, solicit, execute, or cause to be executed, arbitrary orders, ought to be punished, and every citizen called upon, or apprehended by virtue of the law, ought immediately to obey, and renders himself culpable by resistance.

VIII. The law ought to impose no other penalties but such as are absolutely and evidently necessary; and no one ought to be punished, but in virtue of a law promulgated before the offence, and legally applied.

IX. Every man being presumed innocent till he has been convicted, whenever his detention becomes indispensable, all rigour to him, more than is necessary to secure his person, ought to be provided against by the law.

X. No man ought to be molested on account of his opinions, not even on account of his religious opinions, provided his avowal of them does not disturb the public order established by the law.

XI. The unrestrained communication of thoughts and opinions being one of the most precious Rights of Man, every citizen may speak, write, and publish freely, provided he is responsible for the abuse of this liberty, in cases determined by the law.

XII. A public force being necessary to give security to the Rights of Men and of citizens, that force is instituted for the benefit of the community and not for the particular benefit of the persons with whom it is intrusted.

XIII. A common contribution being necessary for the support of the public force, and for defraying the other expenses of Government, it

ought to be divided equally among the members of the community, according to their abilities.

XIV. Every citizen has a right, either by himself or his representative, to a free voice in determining the necessity of public contributions, the appropriation of them, and their amount, mode of assessment, and duration.

XV. Every community has a right to demand of all its agents an account of their conduct.

XVI. Every community in which a separation of powers and a security of rights is not provided for, wants a Constitution.

XVII. The right to property being inviolable and sacred, no one ought to be deprived of it, except in cases of evident public necessity, legally ascertained, and on condition of a previous just indemnity.

OBSERVATIONS ON THE DECLARATION OF RIGHTS

THE first three articles comprehend in general terms the whole of a Declaration of Rights; all the succeeding articles either originate from them or follow as elucidations. The 4th, 5th, and 6th define more particularly what is only generally expressed in the 1st, 2nd, and 3rd.

The 7th, 8th, 9th, 10th, and 11th articles are declaratory of principles upon which laws shall be constructed, conformable to rights already declared.

But it is questioned by some very good people in France, as well as in other countries, whether the 10th article sufficiently guarantees the right it is intended to accord with; besides which it takes off from the divine dignity of religion, and weakens its operative force upon the mind, to make it a subject of human laws. It then presents itself to man like light intercepted by a cloudy medium, in which the source of it is obscured from his sight, and he sees nothing to reverence in the dusky ray.

The remaining articles, beginning with the twelfth, are substantially contained in the principles of the preceding articles; but in the particular situation which France then was, having to undo what was wrong, as well as to set up what was right, it was proper to be more particular than what in another condition of things would be necessary.

While the Declaration of Rights was before the National Assembly some of its members remarked that if a Declaration of Rights was published it should be accompanied by a declaration of duties. The observation discovered a mind that reflected, and it only erred by not reflecting far enough. A Declaration of Rights is, by reciprocity, a declaration of

duties also. Whatever is my right as a man is also the right of another; and it becomes my duty to guarantee as well as to possess.

The first three articles are the basis of Liberty, as well individual as national; nor can any country be called free whose Government does not take its beginning from the principles they contain, and continue to preserve them pure; and the whole of the Declaration of Rights is of more value to the world, and will do more good, than all the laws and statutes that have yet been promulgated.

In the declaratory exordium which prefaces the Declaration of Rights we see the solemn and majestic spectacle of a Nation opening its commission, under the auspices of its Creator, to establish a Government, a scene so new, and so transcendently unequalled by anything in the European world, that the name of a Revolution is diminutive of its character, and it rises into a REGENERATION OF MAN. What are the present Governments of Europe but a scene of iniquity and oppression? What is that of England? Do not its own inhabitants say it is a market where every man has his price, and where corruption is common traffic at the expence of a deluded people? No wonder, then, that the French Revolution is traduced. Had it confined itself merely to the destruction of flagrant despotism perhaps Mr. Burke and some others had been silent. Their cry now is, "It has gone too far"—that is, it has gone too far for them. It stares corruption in the face, and the venal tribe are all alarmed. Their fear discovers itself in their outrage, and they are but publishing the groans of a wounded vice. But from such opposition the French Revolution, instead of suffering, receives an homage. The more it is struck the more sparks it will emit; and the fear is it will not be struck enough. It has nothing to dread from attacks: Truth has given it an establishment, and Time will record it with a name as lasting as his own.

Having now traced the progress of the French Revolution through most of its principal stages, from its commencement to the taking of the Bastille, and its establishment by the Declaration of Rights, I will close the subject with the energetic apostrophe of M. de la Fayette—MAY THIS GREAT MONUMENT, RAISED TO LIBERTY, SERVE AS A LESSON TO THE OPPRESSOR, AND AN EXAMPLE TO THE OPPRESSED!

MISCELLANEOUS CHAPTER

TO PREVENT interrupting the argument in the preceding part of this work, or the narrative that follows it, I reserved some observations to be

thrown together into a miscellaneous chapter; by which variety might not be censured for confusion.

Mr. Burke's book is *all* miscellany. His intention was to make an attack on the French Revolution; but instead of proceeding with an orderly arrangement, he has stormed it with a mob of ideas tumbling over and destroying one another.

But this confusion and contradiction in Mr. Burke's book is easily accounted for. When a man in a long cause attempts to steer his course by anything else than some polar truth or principle, he is sure to be lost. It is beyond the compass of his capacity to keep all the parts of an argument together, and make them unite in one issue, by any other means than having this guide always in view. Neither memory nor invention will supply the want of it. The former fails him, and the latter betrays him.

Notwithstanding the nonsense, for it deserves no better name, that Mr. Burke has asserted about hereditary succession, and that a Nation has not a right to form a Government for itself; it happened to fall in his way to give some account of what Government is.

"Government," says he, "is a contrivance of human wisdom."

Admitting that Government is a contrivance of human *wisdom*, it must necessarily follow, that hereditary succession and hereditary rights (as they are called), can make no part of it, because it is impossible to make wisdom hereditary; and on the other hand, that cannot be a wise contrivance, which in its operation may commit the Government of a Nation to the wisdom of an idiot.

The ground which Mr. Burke now takes is fatal to every part of his cause. The argument changes from hereditary rights to hereditary wisdom; and the question is, Who is the wisest man?

He must now shew that every one in the line of hereditary succession was a Solomon, or his title is not good to be a King.

What a stroke has Mr. Burke now made! To use a sailor's phrase, he has swabbed the deck, and scarcely left a name legible in the list of Kings; and he has mowed down and thinned the House of Peers, with a scythe as formidable as Death and Time.

But Mr. Burke appears to have been aware of this retort; and he has taken care to guard against it, by making Government to be not only a contrivance of human wisdom, but a monopoly of wisdom.

He puts the Nation as fools on one side, and places his Government of wisdom, all wise men of Gotham, on the other side; and he then pro-

claims and says that "Men have a RIGHT that their WANTS should be provided for by this wisdom." Having thus made proclamation, he next proceeds to explain to them what their *wants* are, and also what their *rights* are.

In this he has succeeded dexterously, for he makes their wants to be a *want* of wisdom; but as this is but cold comfort, he then informs them, that they have a *right*—not to any of the wisdom, but to be governed by it; and in order to impress them with a solemn reverence for this monopoly-government of wisdom, and of its vast capacity for all purposes, possible or impossible, right or wrong, he proceeds with astrological mysterious importance, to tell them its powers in these words: "The rights of men in Government are their advantages; and these are often in balance between differences of good; and in compromises sometimes between *good* and *evil*, and sometimes between *evil* and *evil*. Political reason is a *computing principle*; adding—subtracting—multiplying—and dividing, morally and not metaphysically or mathematically, true moral demonstrations."

As the wondering audience, whom Mr. Burke supposes himself talking to, may not understand all this learned jargon, I will undertake to be its interpreter. The meaning, then, good people, of all this, is, That Government is governed by no principle whatever; that it can make evil good, or good evil, just as it pleases. In short, that Government is *arbitrary power*.

But there are some things which Mr. Burke has forgotten.

First, he has not shewn where the wisdom originally came from.

And *Secondly*, he has not shewn by what authority it first began to act.

In the manner he introduces the matter, it is either Government stealing wisdom, or wisdom stealing Government. It is without an origin, and its powers without authority. In short, it is usurpation.

Whether it be from a sense of shame, or from a consciousness of some radical defect in a Government necessary to be kept out of sight, or from both, or from any other cause, I undertake not to determine, but so it is, that a monarchical reasoner never traces Government to its source, or from its source. It is one of the *shibboleths* by which he may be known. A thousand years hence, those who shall live in America or in France, will look back with contemplative pride on the origin of their Governments, and say, *This was the work of our glorious ancestors!* But what can a monarchical talker say? What has he to exult in? Alas! he has nothing. A certain something forbids him to look back to a beginning, lest

some robber, or some Robin Hood, should rise from the long obscurity of time and say, *I am the origin*. Hard as Mr. Burke laboured the Regency Bill and hereditary succession two years ago, and much as he dived for precedents, he still had not boldness enough to bring up William of Normandy, and say, *There is the head of the list, there is the fountain of honour*; the son of a prostitute and the plunderer of the English Nation.

The opinions of men with respect to Government are changing fast in all countries. The Revolutions of America and France have thrown a beam of light over the world, which reaches into man. The enormous expense of Governments has provoked people to think, by making them feel; and when once the veil begins to rend, it admits not of repair. Ignorance is of a peculiar nature: and once dispelled, it is impossible to re-establish it. It is not originally a thing of itself, but is only the absence of knowledge; and though man may be *kept* ignorant, he cannot be *made* ignorant.

The mind, in discovering truth, acts in the same manner as it acts through the eye in discovering objects; when once any object has been seen, it is impossible to put the mind back to the same condition it was in before it saw it.

Those who talk of a counter-revolution in France, show how little they understand of man. There does not exist in the compass of language an arrangement of words to express so much as the means of effecting a counter-revolution. The means must be an obliteration of knowledge; and it has never yet been discovered how to make man *unknow* his knowledge, or *unthink* his thoughts.

Mr. Burke is labouring in vain to stop the progress of knowledge; and it comes with the worse grace from him, as there is a certain transaction known in the city which renders him suspected of being a pensioner in a fictitious name. This may account for some strange doctrine he has advanced in his book, which though he points it at the Revolution Society, is effectually directed against the whole Nation.

"The King of England," says he, "holds *his* Crown" (for it does not belong to the Nation, according to Mr. Burke) "in *contempt* of the choice of the Revolution Society, who have not a single vote for a King among them either *individually* or *collectively*; and his Majesty's heirs each in their time and order, will come to the Crown *with the same contempt* of their choice with which his Majesty has succeeded to that which he now wears."

As to who is King in England or elsewhere, or whether there is any King at all, or whether the people choose a Cherokee chief, or a Hessian

hussar for a King, it is not a matter that I trouble myself about, be that to themselves; but with respect to the doctrine, so far as it relates to the rights of Men and Nations, it is as abominable as anything ever uttered in the most enslaved country under heaven. Whether it sounds worse to my ear, by not being accustomed to hear such despotism, than what it does to the ear of another person, I am not so well a judge of; but of its abominable principle I am at no loss to judge.

It is not the Revolution Society that Mr. Burke means; it is the Nation, as well in its *original* as in its *representative* character; and he has taken care to make himself understood, by saying that they have not a vote either *collectively* or *individually*. The Revolution Society is composed of citizens of all denominations, and of members of both the Houses of Parliament; and consequently, if there is not a right to a vote in any of the characters, there can be no right to any either in the Nation or in its Parliament. This ought to be a caution to every country how it imports foreign families to be Kings. It is somewhat curious to observe, that although the people of England have been in the habit of talking about Kings, it is always a foreign house of Kings, hating foreigners yet governed by them. It is now the House of Brunswick, one of the petty tribes of Germany.

It has hitherto been the practice of the English Parliaments to regulate what was called the succession (taking it for granted that the Nation then continued to accord to the form of annexing a monarchical branch to its Government; for without this the Parliament could not have had authority to have sent either to Holland or to Hanover, or to impose a King upon the Nation against its will). And this must be the utmost limit to which Parliament can go upon the case; but the right of the Nation goes to the *whole* case, because it has the right of changing its *whole* form of Government. The right of a Parliament is only a right in trust, a right by delegation, and that but from a very small part of the Nation; and one of its Houses has not even this. But the right of the Nation is an original right, as universal as taxation. The Nation is the paymaster of everything, and everything must conform to its general will.

I remember taking notice of a speech in what is called the English House of Peers, by the then Earl of Shelburne, and I think it was at the time he was Minister, which is applicable to this case. I do not directly charge my memory with every particular; but the words and the purport, as nearly as I remember, were these: *That the form of a Government was a matter wholly at the will of a Nation at all times, that if it chose a monarchical form, it had a right to have it so; and if it afterwards chose*

to be a Republic, it had a right to be a Republic, and to say to a King, "We have no longer any occasion for you."

When Mr. Burke says that "his Majesty's heirs and successors, each in their time and order, will come to the Crown with the *same contempt* of their choice with which his Majesty has succeeded to that he wears," it is saying too much even to the humblest individual in the country, part of whose daily labour goes towards making up the million sterling a-year, which the country gives the person it stiles a King. Government with insolence is despotism; but when contempt is added it becomes worse; and to pay for contempt is the excess of slavery. This species of Government comes from Germany; and reminds me of what one of the Brunswick soldiers told me, who was taken prisoner by the Americans in the late war: "Ah!" said he, "America is a fine free country, it is worth the people's fighting for; I know the difference by knowing my own; in my country, if the prince says eat straw, we eat straw." God help that country, thought I, be it England or elsewhere, whose liberties are to be protected by German principles of Government, and Princes of Brunswick!

As Mr. Burke sometimes speaks of England, sometimes of France, and sometimes of the world, and of Government in general, it is difficult to answer his book without apparently meeting him on the same ground. Although principles of Government are general subjects, it is next to impossible, in many cases, to separate them from the idea of place and circumstance, and the more so when circumstances are put for arguments, which is frequently the case with Mr. Burke.

In the former part of his book, addressing himself to the people of France, he says: "No experience has taught us (meaning the English), that in any other course or method than that of a *hereditary crown*, can our liberties be regularly perpetuated and preserved sacred as our *hereditary right*." I asked Mr. Burke, Who is to take them away? M. de la Fayette, in speaking to France, says: "For a Nation to be free, it is sufficient that she wills it." But Mr. Burke represents England as wanting capacity to take care of itself, and that its liberties must be taken care of by a King holding it in "contempt." If England is sunk to this, it is preparing itself to eat straw, as in Hanover, or in Brunswick. But besides the folly of the declaration, it happens that the facts are all against Mr. Burke. It was by the Government *being hereditary*, that the liberties of the people were endangered. Charles I. and James II. are instances of this truth; yet neither of them went so far as to hold the Nation in contempt.

As it is sometimes of advantage to the people of one country to hear

what those of other countries have to say respecting it, it is possible that the people of France may learn something from Mr. Burke's book, and that the people of England may also learn something from the answers it will occasion. When Nations fall out about freedom, a wide field of debate is opened. The argument commences with the rights of war, without its evils; and as knowledge is the object contended for, the party that sustains the defeat obtains the prize.

Mr. Burke talks about what he calls an hereditary crown, as if it were some production of Nature; or as if, like time, it had a power to operate, not only independently, but in spite of man; or as if it were a thing or a subject universally consented to. Alas! it has none of those properties, but is the reverse of them all. It is a thing in imagination, the propriety of which is more than doubted, and the legality of which in a few years will be denied.

But, to arrange this matter in a clearer view than what general expression can convey, it will be necessary to state the distinct heads under which (what is called) an hereditary crown, or more properly speaking, an hereditary succession to the Government of a Nation, can be considered; which are—

First, the right of a particular Family to establish itself.

Secondly, the right of a Nation to establish a particular Family.

With respect to the first of these heads, that of a Family establishing itself with hereditary powers on its own authority, and independent of the consent of a Nation, all men will concur in calling it despotism, and it would be trespassing on their understanding to attempt to prove it.

But the second head, that of a Nation establishing a particular Family with hereditary powers, does not present itself as despotism on the first reflection; but if men will permit a second reflection to take place, and carry that reflection forward but one remove out of their own persons to that of their offspring, they will then see that hereditary succession becomes in its consequences the same despotism to others, which they reprobated for themselves. It operates to preclude the consent of the succeeding generations; and the preclusion of consent is despotism. When the person who at any time shall be in possession of a Government, or those who stand in succession to him, shall say to a Nation, I hold this power in "contempt" of you, it signifies not on what authority he pretends to say it. It is no relief, but an aggravation to a person in slavery, to reflect that he was sold by his parent; and as that which heightens the criminality of an act cannot be produced to prove the legality of it, hereditary succession cannot be established as a legal thing.

In order to arrive at a more perfect decision on this head, it will be proper to consider the generation which undertakes to establish a family with hereditary powers, apart and separate from the generations which are to follow; and also to consider the character in which the first generation acts with respect to succeeding generations.

The generation which first selects a person, and puts him at the head of its Government, either with the title of King, or any other distinction, acts its own choice, be it wise or foolish, as a free agent for itself.

The person so set up is not hereditary, but selected and appointed; and the generation who sets him up, does not live under an hereditary Government, but under a Government of its own choice and establishment.

Were the generation who sets him up, and the person so set up, to live for ever, it never could become hereditary succession; and of consequence hereditary succession can only follow on the death of the first parties.

As, therefore, hereditary succession is out of the question with respect to the *first* generation, we have now to consider the character in which *that* generation acts with respect to the commencing generation, and to all succeeding ones.

It assumes a character, to which it has neither right nor title. It changes itself from a legislator to a testator, and affects to make its WILL, which is to have operation after the demise of the makers, to bequeath the Government: and it not only attempts to bequeath, but to establish on the succeeding generation, a new and different form of Government under which itself lived. Itself, as already observed, lived not under a hereditary Government, but under a Government of its own choice and establishment; and it now attempts, by virtue of a will and testament (and which it has not authority to make), to take from the commencing generation, and all future ones, the rights and free agency by which itself acted.

But, exclusive of the right which any generation has to act collectively as a testator, the objects to which it applies itself in this case, are not within the compass of any law, or of any will or testament.

The rights of men in society, are neither devisable or transferable, nor annihilable, but are descendable only, and it is not in the power of any generation to intercept finally, and cut off the descent.

If the present generation, or any other, are disposed to be slaves, it does not lessen the right of the succeeding generation to be free. Wrongs cannot have a legal descent.

When Mr. Burke attempts to maintain that the English Nation did at the Revolution of 1688, most solemnly renounce and abdicate their

rights for themselves, and for all their posterity for ever, he speaks a language that merits not reply, and which can only excite contempt for his prostitute principles, or pity for his ignorance.

In whatever light hereditary succession, as growing out of the will and testament of some former generation, presents itself, it is an absurdity. A cannot make a will to take from B the property of B, and give it to C; yet this is the manner in which (what is called) hereditary succession by law operates. A certain former generation made a will to take away the rights of the commencing generation, and all future ones, and convey those rights to a third person, who afterwards comes forward, and tells them, in Mr. Burke's language, that they have *no rights*, that their rights are already bequeathed to him and that he will govern in *contempt* of them. From such principles, and such ignorance, Good Lord deliver the world!

But, after all, what is the metaphor called a Crown, or rather what is Monarchy? Is it a thing, or is it a name, or is it a fraud? Is it a "contrivance of human wisdom," or of human craft to obtain money from a Nation under specious pretences? Is it a thing necessary to a Nation? If it is, in what does that necessity consist, what services does it perform, what is its business, and what are its merits? Does the virtue consist in the metaphor, or in the man? Doth the goldsmith that makes the crown, make the virtue also? Doth it operate like Fortunatus's wishing-cap, or Harlequin's wooden sword? Doth it make a man a conjuror? In fine, what is it? It appears to be a something going much out of fashion, falling into ridicule, and rejected in some countries both as unnecessary and expensive. In America it is considered as an absurdity; and in France it has so far declined, that the goodness of the man and the respect for his personal character, are the only things that preserve the appearance of its existence.

If Government be what Mr. Burke describes it, "a contrivance of human wisdom," I might ask him, if wisdom was at such a low ebb in England, that it was become necessary to import it from Holland and from Hanover? But I will do the country the justice to say, that was not the case; and even if it was, it mistook the cargo. The wisdom of every country, when properly exerted, is sufficient for all its purposes; and there could exist no more real occasion in England to have sent for a Dutch stadtholder, or a German elector, than there was in America to have done a similar thing. If a country does not understand its own affairs, how is a foreigner to understand them, who knows neither its laws, its manners, nor its language? If there existed a man so transcendently wise above

all others, that his wisdom was necessary to instruct a Nation, some reason might be offered for Monarchy; but when we cast our eyes about a country, and observe how every part understands its own affairs; and when we look around the world, and see that of all men in it, the race of Kings are the most insignificant in capacity, our reason cannot fail to ask us—What are those men kept for?

If there be anything in Monarchy which we people of America do not understand, I wish Mr. Burke would be so kind as to inform us. I see in America, a Government extending over a country ten times as large as England, and conducted with regularity, for a fortieth part of the expence which Government costs in England. If I ask a man in America if he wants a King, he retorts, and asks me if I take him for an idiot? How is it that this difference happens? are we more or less wise than others? I see in America the generality of people living in a stile of plenty unknown in monarchical countries; and I see that the principle of its Government, which is that of the *equal Rights of Man*, is making a rapid progress in the world.

If Monarchy is a useless thing, why is it kept up anywhere? and if a necessary thing, how can it be dispensed with? That *civil Government* is necessary, all civilised Nations will agree: but civil Government is republican Government. All that part of the Government of England which begins with the office of constable, and proceeds through the department of magistrate, quarter-sessions, and general assize, including trial by jury, is republican Government. Nothing of Monarchy appears in any part of it, except the name which William the Conqueror imposed upon the English, that of obliging them to call him "Their Sovereign Lord the King."

It is easy to conceive that a band of interested men, such as placemen, pensioners, lords of the bedchamber, lords of the kitchen, lords of the necessary-house, and the Lord knows what besides, can find as many reasons for Monarchy as their salaries, paid at the expence of the country, amount to; but if I ask the farmer, the manufacturer, the merchant, the tradesman, and down through all the occupations of life to the common labourer, what service Monarchy is to him? he can give me no answer. If I ask him what Monarchy is, he believes it is something like a sinecure.

Notwithstanding the taxes of England amount to almost seventeen millions a year, said to be for the expences of Government, it is still evident that the sense of the nation is left to govern itself, and does govern itself, by magistrates and juries, almost at its own charge, on republican prin-

ciples, exclusive of the expence of taxes. The salaries of the judges are almost the only charge that is paid out of the revenue. Considering that all the internal Government is executed by the people, the taxes of England ought to be the lightest of any nation in Europe; instead of which, they are the contrary. As this cannot be counted on the score of civil Government, the subject necessarily extends itself to the Monarchical part.

When the people of England sent for George the First, (and it would puzzle a wiser man than Mr. Burke to discover for what he could be wanted, or what service he could render) they ought at least to have conditioned for the abandonment of Hanover. Besides the endless German intrigues that must follow from a German Elector being King of England, there is a natural impossibility of uniting in the same person the principles of freedom and the principles of despotism, or as it is usually called in England arbitrary power. A German Elector is in his electorate a despot; how then could it be expected that he should be attached to principles of liberty in one country while his interest in another was to be supported by despotism? The union cannot exist; and it might easily have been foreseen that German electors would make German Kings, or in Mr. Burke's words, would assume Government with "contempt." The English have been in the habit of considering a King of England only in the character in which he appears to them; whereas the same person, while the connection lasts, has a home-seat in another country, the interest of which is different to their own, and the principles of the Governments in opposition to each other. To such a person England will appear as a town-residence, and the electorate as the estate. The English may wish, as I believe they do, success to the principles of liberty in France, or in Germany; but a German Elector trembles for the fate of despotism in his electorate; and the Dutchy of Mecklenburg, where the present Queen's family governs, is under the same wretched state of arbitrary power, and the people in slavish vassalage.

There never was a time when it became the English to watch continental intrigues more circumspectly than at the present moment, and to distinguish the politics of the electorate from the politics of the Nation. The Revolution of France has entirely changed the ground with respect to England and France, as Nations; but the German despots, with Prussia at their head, are combining against Liberty; and the fondness of Mr. Pitt for office, and the interest which all his family connections have obtained, do not give sufficient security against this intrigue.

As everything which passes in the world becomes matter for history,

I will now quit this subject, and take a concise review of the state of parties and politics in England, as Mr. Burke has done in France.

Whether the present reign commenced with contempt, I leave to Mr. Burke; certain, however, it is that it had strongly that appearance. The animosity of the English Nation, it is very well remembered, ran high; and, had the true principles of Liberty been as well understood then as they now promise to be, it is probable the Nation would not have patiently submitted to so much. George the First and Second were sensible of a rival in the remains of the Stuarts; and as they could not but consider themselves as standing on their good behaviour, they had prudence to keep their German principles of Government to themselves; but as the Stuart family wore away, the prudence became less necessary.

The contest between rights, and what were called prerogatives, continued to heat the Nation till some time after the conclusion of the American War—when all at once it fell a calm—execration exchanged itself for applause, and Court popularity sprang up like a mushroom in a night.

To account for this sudden transition, it is proper to observe that there are two distinct species of popularity; the one excited by merit, and the other by resentment. As the Nation had formed itself into two parties, and each was extolling the merits of its parliamentary champions for and against prerogative, nothing could operate to give a more general shock than an immediate coalition of the champions themselves. The partisans of each being thus suddenly left in the lurch, and mutually heated with disgust at the measure, felt no other relief than uniting in a common execration against both. A higher stimulus of resentment being thus excited than what the contest on prerogatives occasioned, the Nation quitted all former objects of rights and wrongs, and sought only that of gratification. The indignation at the Coalition so effectually superseded the indignation against the Court as to extinguish it; and without any change of principles on the part of the Court, the same people who had reprobated its despotism united with it to revenge themselves on the Coalition Parliament. The case was not, which they liked best, but which they hated most; and the least hated passed for love. The dissolution of the Coalition Parliament, as it afforded the means of gratifying the resentment of the Nation, could not fail to be popular: and from hence arose the popularity of the Court.

Transitions of this kind exhibit a Nation under the Government of temper, instead of a fixed and steady principle; and having once committed itself, however rashly, it feels itself urged along to justify, by continuance, its first proceeding. Measures which at other times it would

censure, it now approves, and acts persuasion upon itself to suffocate its judgment.

On the return of a new Parliament, the new Minister, Mr. Pitt, found himself in a secure majority; and the Nation gave him credit, not out of regard to himself, but because it had resolved to do it out of resentment to another. He introduced himself to public notice by a proposed reform of Parliament, which in its operation would have amounted to a public justification of corruption. The Nation was to be at the expence of buying up the rotten boroughs, whereas it ought to punish the persons who deal in the traffic.

Passing over the two bubbles of the Dutch business and the million a-year to sink the national debt, the matter which most presents itself, is the affair of the Regency. Never, in the course of my observation, was delusion more successfully acted, nor a Nation more completely deceived. But, to make this appear, it will be necessary to go over the circumstances.

Mr. Fox had stated in the House of Commons, that the Prince of Wales, as heir in succession, had a right in himself to assume the Government. This was opposed by Mr. Pitt; and, so far as the opposition was confined to the doctrine, it was just. But the principles which Mr. Pitt maintained on the contrary side were as bad, or worse in their extent, than those of Mr. Fox; because they went to establish an Aristocracy over the Nation, and over the small representation it has in the House of Commons.

Whether the English form of Government be good or bad, is not in this case the question; but, taking it as it stands, without regard to its merits or demerits, Mr. Pitt was farther from the point than Mr. Fox.

It is supposed to consist of three parts: while therefore the Nation is disposed to continue this form, the parts have a *national standing*, independent of each other, and are not the creatures of each other. Had Mr. Fox passed through Parliament, and said that the person alluded to claimed on the ground of the Nation, Mr. Pitt must then have contended (what he called) the right of the Parliament against the right of the Nation.

By the appearance which the contest made, Mr. Fox took the hereditary ground, and Mr. Pitt the parliamentary ground; but the fact is, they both took hereditary ground, and Mr. Pitt took the worse of the two.

What is called the Parliament is made up of two Houses, one of which is more hereditary, and more beyond the controul of the Nation than

what the Crown (as it is called) is supposed to be. It is an hereditary Aristocracy, assuming and asserting indefeasible, irrevocable rights and authority, wholly independent of the Nation. Where, then, was the merited popularity of exalting this hereditary power over another hereditary power less independent of the Nation than what itself assumed to be, and of absorbing the rights of the Nation into a House over which it has neither election nor controul?

The general impulse of the Nation was right; but it acted without reflection. It approved the opposition made to the right set up by Mr. Fox, without perceiving that Mr. Pitt was supporting another indefeasible right more remote from the Nation in opposition to it.

With respect to the House of Commons, it is elected but by a small part of the Nation; but were the election as universal as taxation, which it ought to be, it would still be only the organ of the Nation, and cannot possess inherent rights. When the National Assembly of France resolves a matter, the resolve is made in right of the Nation; but Mr. Pitt, on all national questions, so far as they refer to the House of Commons, absorbs the rights of the nation into the organ, and makes the organ into a Nation, and the Nation itself into a cypher.

In a few words, the question on the Regency was a question of a million a-year, which is appropriated to the executive department; and Mr. Pitt could not possess himself of any management of this sum, without setting up the supremacy of Parliament; and when this was accomplished, it was indifferent who should be Regent, as he must be Regent at his own cost. Among the curiosities which this contentious debate afforded, was that of making the Great Seal into a King, the affixing of which to an act was to be royal authority. If, therefore, Royal Authority is a Great Seal, it consequently is in itself nothing; and a good Constitution would be of infinitely more value to the Nation than what the three nominal powers, as they now stand, are worth.

The continual use of the word *Constitution* in the English Parliament shews there is none; and that the whole is merely a form of Government without a Constitution, and constituting itself with what powers it pleases. If there were a Constitution it certainly could be referred to; and the debate on any constitutional point would terminate by producing the Constitution. One member says this is constitution, and another says that is constitution—to-day it is one thing, to-morrow it is something else—while the maintaining the debate proves there is none. Constitution is now the cant word of Parliament, tuning itself to the ear of the Nation. Formerly it was the *universal supremacy of Parliament—the*

omnipotence of Parliament: but since the progress of Liberty in France, those phrases have a despotic harshness in their note; and the English Parliament have caught the fashion from the National Assembly, but without the substance, of speaking of *Constitution*.

As the present generation of people in England did not make the Government, they are not accountable for any of its defects; but, that sooner or later, it must come into their hands to undergo a constitutional reformation, is as certain as that the same thing has happened in France. If France, with a revenue of nearly twenty-four millions sterling, with an extent of rich and fertile country above four times larger than England, with a population of twenty-four millions of inhabitants to support taxation, with upwards of ninety millions sterling of gold and silver circulating in the Nation, and with a debt less than the present debt of England—still found it necessary, from whatever cause, to come to a settlement of its affairs, it solves the problem of funding for both countries.

It is out of the question to say how long what is called the English Constitution has lasted, and to argue from thence how long it is to last; the question is, how long can the funding system last? It is a thing but of modern invention, and has not yet continued beyond the life of a man; yet in that short space it has so far accumulated, that, together with the current expences, it requires an amount of taxes at least equal to the whole landed rental of the Nation in acres to defray the annual expenditure. That a Government could not have always gone on by the same system which has been followed for the last seventy years, must be evident to every man; and for the same reason it cannot always go on.

The funding system is not money; neither is it, properly speaking, credit. It, in effect, creates upon paper the sum which it appears to borrow, and lays on a tax to keep the imaginary capital alive by the payment of interest and sends the annuity to market, to be sold for paper already in circulation. If any credit is given, it is to the disposition of the people to pay the tax, and not to the government, which lays it on. When this disposition expires, what is supposed to be the credit of Government expires with it. The instance of France under the former Government, shews that it is impossible to compel the payment of taxes by force, when a whole Nation is determined to take its stand upon that ground.

Mr. Burke, in his review of the finances of France, states the quantity of gold and silver in France, at about eighty-eight millions sterling. In doing this, he has, I presume, divided by the difference of exchange, instead of the standard of twenty-four livres to a pound sterling; for

M. Neckar's statement, from which Mr. Burke's is taken, is *two thousand two hundred millions of livres*, which is upwards of ninety-one millions and a half sterling.

M. Neckar in France, and Mr. George Chalmers of the Office of Trade and Plantation in England, of which Lord Hawkesbury is president, published nearly about the same time (1786) an account of the quantity of money in each Nation, from the returns of the Mint of each Nation. Mr. Chalmers, from the returns of the English Mint at the Tower of London, states the quantity of money in England, including Scotland and Ireland, to be twenty millions sterling.

M. Neckar says that the amount of money in France, re-coined from the old coin which was called in, was two thousand five hundred millions of livres (upwards of one hundred and four millions sterling); and, after deducting for waste, and what may be in the West Indies and other possible circumstances, states the circulation quantity at home to be ninety-one millions and a half sterling; but taking it as Mr. Burke has put it, it is sixty-eight millions more than the national quantity in England.

That the quantity of money in France cannot be under this sum, may at once be seen from the state of the French Revenue, without referring to the records of the French Mint for proofs. The Revenue of France, prior to the Revolution, was nearly twenty-four millions sterling; and as paper had then no existence in France the whole revenue was collected in gold and silver; and it would have been impossible to have collected such a quantity of revenue upon a less national quantity than M. Neckar has stated. Before the establishment of paper in England, the revenue was about a fourth part of the national amount of gold and silver, as may be known by referring to the revenue prior to King William and the quantity of money stated to be in the Nation at that time, which was nearly as much as it is now.

It can be of no real service to a Nation, to impose upon itself, or to permit itself to be imposed upon; but the prejudices of some, and the imposition of others, have always represented France as a Nation possessing but little money—whereas the quantity is not only more than four times what the quantity is in England, but is considerably greater on a proportion of numbers. To account for this deficiency on the part of England, some reference should be had to the English system of funding. It operates to multiply paper, and to substitute it in the room of money, in various shapes; and the more paper is multiplied, the more opportunities are afforded to export the specie; and it admits of a possibility (by extending it to small notes) of increasing paper till there is no money left.

I know this is not a pleasant subject to English readers; but the matters I am going to mention, are so important in themselves, as to require the attention of men interested in money transactions of a public nature. There is a circumstance stated by M. Neckar, in his treatise on the administration of the finances, which has never been attended to in England, but which forms the only basis whereon to estimate the quantity of money (gold and silver) which ought to be in every Nation in Europe, to preserve a relative proportion with other nations.

Lisbon and Cadiz are the two ports into which money, gold and silver, from South America are imported, and which afterwards divide and spread themselves over Europe by means of commerce, and increase the quantity of money in all parts of Europe. If, therefore, the amount of the annual importation into Europe can be known, and the relative proportion of the foreign commerce of the several nations by which it can be distributed can be ascertained, they give a rule sufficiently true, to ascertain the quantity of money which ought to be found in any Nation, at any given time.

M. Neckar shows from the registers of Lisbon and Cadiz, that the importation of gold and silver into Europe, is five millions sterling annually. He has not taken it on a single year, but on an average of fifteen succeeding years, from 1763 to 1777, both inclusive; in which time the amount was one thousand eight hundred million livres, which is seventy-five millions sterling.

From the commencement of the Hanover succession in 1714 to the time Mr. Chalmers published is seventy-two years; and the quantity imported into Europe, in that time, would be three hundred and sixty millions sterling.

If the foreign commerce of Great Britain be stated at a sixth part of what the whole foreign commerce of Europe amounts to (which is probably an inferior estimation to what the gentlemen at the exchange would allow) the proportion which Britain should draw by commerce of this sum, to keep herself on a proportion with the rest of Europe, would be also a sixth part, which is sixty millions sterling; and if the same allowance for waste and accident be made for England which M. Neckar makes for France, the quantity remaining after these deductions would be fifty-two millions; and this sum ought to have been in the Nation (at the time Mr. Chalmers published), in addition to the sum which was in the Nation at the commencement of the Hanover succession, and to have made in the whole at least sixty-six millions sterling; instead of which there were but

twenty millions, which is forty-six millions below its proportionate quantity.

As the quantity of gold and silver imported into Lisbon and Cadiz is more exactly ascertained than that of any commodity imported into England, and as the quantity of money coined at the Tower of London is still more positively known, the leading facts do not admit of controversy. Either, therefore, the commerce of England is unproductive of profit, or the gold and silver which it brings in leak continually away by unseen means at the average rate of about three-quarters of a million a year, which, in the course of seventy-two years, accounts for the deficiency; and its absence is supplied by paper.

The Revolution of France is attended with many novel circumstances, not only in the political sphere, but in the circle of money transactions. Among others, it shews that a Government may be in a state of insolvency and a Nation rich. So far as the fact is confined to the late Government of France, it was insolvent; because the Nation would no longer support its extravagance, and therefore it could no longer support itself—but with respect to the Nation all the means existed. A Government may be said to be insolvent every time it applies to the Nation to discharge its arrears. The insolvency of the late Government of France and the present Government of England differed in no other respect than as the disposition of the people differ. The people of France refused their aid to the old Government; and the people of England submit to taxation without enquiry. What is called the Crown in England has been insolvent several times; the last of which, publicly known, was in May, 1777, when it applied to the nation to discharge upwards of £600,000 private debts, which otherwise it could not pay.

It was the error of Mr. Pitt, Mr. Burke, and all those who were unacquainted with the affairs of France, to confound the French Nation with the French Government. The French Nation, in effect, endeavoured to render the late Government insolvent for the purpose of taking Government into its own hands: and it reserved its means for the support of the new Government. In a country of such vast extent and population as France the natural means cannot be wanting; and the political means appear the instant the Nation is disposed to permit them. When Mr. Burke, in a speech last winter in the British Parliament, *cast his eyes over the map of Europe, and saw a chasm that once was France*, he talked like a dreamer of dreams. The same natural France existed as before, and all the natural means existed with it. The only chasm was that which

the extinction of despotism had left, and which was to be filled up with a Constitution more formidable in resources than the power which had expired.

Although the French Nation rendered the late Government insolvent, it did not permit the insolvency to act towards the creditors; and the creditors, considering the Nation as the real pay-master, and the Government only as the agent, rested themselves on the Nation, in preference to the Government. This appears greatly to disturb Mr. Burke, as the precedent is fatal to the policy by which Governments have supposed themselves secure. They have contracted debts, with a view of attaching what is called the monied interest of a Nation to their support; but the example in France shews that the permanent security of the creditor is in the Nation, and not in the Government; and that in all possible Revolutions that may happen in Governments, the means are always with the Nation, and the Nation always in existence. Mr. Burke argues that the creditors ought to have abided the fate of the Government which they trusted; but the National Assembly considered them as the creditors of the Nation, and not of the Government—of the master, and not of the steward.

Notwithstanding the late Government could not discharge the current expences, the present Government has paid off a great part of the capital. This has been accomplished by two means; the one by lessening the expences of Government, and the other by the sale of the monastic and ecclesiastical landed estates. The devotees and penitent debauchees, extortioners and misers of former days, to ensure themselves a better world than that which they were about to leave, had bequeathed immense property in trust to the priesthood, for *pious uses*; and the priesthood kept it for themselves. The National Assembly has ordered it to be sold for the good of the whole Nation, and the priesthood to be decently provided for.

In consequence of the Revolution, the annual interest of the debt of France will be reduced at least six millions sterling, by paying off upwards of one hundred millions of the capital; which, with lessening the former expences of Government at least three millions, will place France in a situation worthy the imitation of Europe.

Upon a whole review of the subject, how vast is the contrast! While Mr. Burke has been talking of a general bankruptcy in France, the National Assembly has been paying off the capital of its debt; and while taxes have increased near a million a year in England, they have lowered

several millions a year in France. Not a word has either Mr. Burke or Mr. Pitt said about the French affairs, or the state of the French finances, in the present session of Parliament. The subject begins to be too well understood, and imposition serves no longer.

There is a general enigma running through the whole of Mr. Burke's book. He writes in a rage against the National Assembly; but what is he enraged about? If his assertions were as true as they are groundless, and that France, by her Revolution, had annihilated her power, and become what he calls a *chasm*, it might excite the grief of a Frenchman (considering himself as a national man), and provoke his rage against the National Assembly; but why should it excite the rage of Mr. Burke? Alas! it is not the Nation of France that Mr. Burke means, but the COURT; and every Court in Europe, dreading the same fate, is in mourning. He writes neither in the character of a Frenchman nor an Englishman, but in the fawning character of that creature known in all countries, and a friend to none, a COURTIER. Whether it be the Court of Versailles, or the Court of St. James, or of Carlton House, or the Court in expectation, signifies not; for the caterpillar principle of all courts and courtiers are alike. They form a common policy throughout Europe, detached and separate from the interest of Nations; and while they appear to quarrel, they agree to plunder. Nothing can be more terrible to a Court or courtier than the Revolution of France. That which is a blessing to Nations is bitterness to them: and as their existence depends on the duplicity of a country, they tremble at the approach of principles, and dread the precedent that threatens their overthrow.

CONCLUSION

REASON and Ignorance, the opposite to each other, influence the great bulk of mankind. If either of these can be rendered sufficiently extensive in a country, the machinery of Government goes easily on. Reason obeys itself; and Ignorance submits to whatever is dictated to it.

The two modes of Government which prevail in the world, are—

First, Government by election and representation.

Secondly, Government by hereditary succession.

The former is generally known by the name of Republic; the latter by that of Monarchy and Aristocracy.

Those two distinct and opposite forms erect themselves on the two distinct and opposite bases of Reason and Ignorance.

As the exercise of Government requires talents and abilities, and as talents and abilities cannot have hereditary descent, it is evident that hereditary succession requires a belief from man to which his reason cannot subscribe, and which can only be established upon his ignorance; and the more ignorant any country is, the better it is fitted for this species of Government.

On the contrary, Government, in a well-constituted Republic, requires no belief from man beyond what his reason can give.

He sees the *rationale* of the whole system, its origin and its operation; and as it is best supported when best understood, the human faculties act with boldness, and acquire under this form of Government a gigantic manliness.

As, therefore, each of those forms acts on a different base, the one moving freely by the aid of reason, the other by ignorance, we have next to consider, what it is that gives motion to that species of Government which is called Mixed Government, or, as it is sometimes ludicrously stiled, *a Government of this, that, and t'other*.

The moving power in this species of Government is of necessity Corruption. However imperfect election and representation may be in Mixed Governments, they still give exercise to a greater portion of reason than is convenient to the hereditary part; and therefore it becomes necessary to buy the reason up.

A Mixed Government is an imperfect everything, cementing and soldering the discordant parts together by corruption, to act as a whole. Mr. Burke appears highly disgusted that France, since she had resolved on a Revolution, did not adopt what he calls "*A British Constitution*;" and the regretful manner in which he expresses himself on this occasion implies a suspicion that the British Constitution needed something to keep its defects in countenance.

In Mixed Governments there is no responsibility: the parts cover each other till responsibility is lost; and the Corruption which moves the machine, contrives at the same time its own escape. When it is laid down as a maxim, that *a King can do no wrong*, it places him in a state of similar security with that of idiots and persons insane, and responsibility is out of the question with respect to himself.

It then descends upon the Minister, who shelters himself under a majority in Parliament, which by places, pensions, and corruption, he can always command; and that majority justifies itself by the same authority with which it protects the Minister. In this rotatory motion, responsibility is thrown off from the parts, and from the whole.

When there is part in a Government which can do no wrong, it implies that it does nothing; and is only the machine of another power, by whose advice and direction it acts.

What is supposed to be the King in a Mixed Government is the Cabinet; and as the Cabinet is always a part of the Parliament, and the members justifying in one character what they advise and act in another, a Mixed Government becomes a continual enigma; entailing upon a country, by the quantity of corruption necessary to solder the parts, the expence of supporting all the forms of Government at once, and finally resolving them into a Government by committee; in which the advisers, the actors, the approvers, the justifiers, the persons responsible, and the persons not responsible, are the same persons.

By this pantomimical contrivance, and change of scene and character, the parts help each other out in matters which neither of them singly would assume to act.

When money is to be obtained, the mass of variety apparently dissolves, and a profusion of parliamentary praises passes between the parts. Each admires with astonishment, the wisdom, the liberality, and disinterestedness of the other; and all of them breathe a pitying sigh at the burdens of the Nation.

But in a well-constituted Republic, nothing of this soldering, praising, and pitying, can take place; the representation being equal throughout the country, and compleat in itself, however it may be arranged into legislative and executive, they have all one and the same natural source. The parts are not foreigners to each other, like Democracy, Aristocracy, and Monarchy. As there are no discordant distinctions, there is nothing to corrupt by compromise, nor confound by contrivance. Public measures appeal of themselves to the understanding of the Nation, and resting on their own merits, disown any flattering applications to vanity. The continual whine of lamenting the burden of taxes, however successfully it may be practised in Mixed Governments, is inconsistent with the sense and spirit of a Republic. If taxes are necessary, they are of course advantageous, but if they require an apology, the apology itself implies an impeachment. Why, then, is man imposed upon, or why does he impose upon himself?

When men are spoken of as Kings and subjects, or when Government is mentioned under the distinct or combined heads of Monarchy, Aristocracy, and Democracy, what is it that *reasoning* man is to understand by the terms? If there really existed in the world two or more distinct and separate *elements* of human power, we should then see the several origins

to which those terms would descriptively apply; but as there is but one species of man, there can be but one element of human power, and that element is man himself. Monarchy, Aristocracy, and Democracy, are but creatures of imagination; and a thousand such may be contrived as well as three.

From the Revolutions of America and France, and the symptoms that have appeared in other countries, it is evident that the opinion of the world is changed with respect to systems of Government, and that Revolutions are not within the compass of political calculations.

The progress of time and circumstances, which men assign to the accomplishment of great changes, is too mechanical to measure the force of the mind, and the rapidity of reflection, by which Revolutions are generated: All the old Governments have received a shock from those that already appear, and which were once more improbable, and are a greater subject of wonder, than a general Revolution in Europe would be now.

When we survey the wretched condition of Man, under the monarchical and hereditary systems of Government, dragged from his home by one power, or driven by another, and impoverished by taxes more than by enemies, it becomes evident that those systems are bad, and that a general Revolution in the principle and construction of Governments is necessary.

What is Government more than the management of the affairs of a Nation? It is not, and from its nature cannot be, the property of any particular man or family, but of the whole community, at whose expence it is supported; and though by force and contrivance it has been usurped into an inheritance, the usurpation cannot alter the right of things. Sovereignty, as a matter of right, appertains to the Nation only, and not to any individual; and a Nation has at all times an inherent, indefeasible right to abolish any form of Government it finds inconvenient, and to establish such as accords with its interest, disposition, and happiness. The romantic and barbarous distinction of men into Kings and subjects, though it may suit the conditions of courtiers, cannot that of citizens; and is exploded by the principle upon which Governments are now founded. Every citizen is a member of the sovereignty; and, as such, can acknowledge no personal subjection: and his obedience can be only to the laws.

When men think of what Government is, they must necessarily suppose it to possess a knowledge of all the objects and matters upon which

its authority is to be exercised. In this view of Government, the Republican system, as established by America and France, operates to embrace the whole of a Nation; and the knowledge necessary to the interest of all the parts, is to be found in the centre, which the parts by representation form; but the old Governments are on a construction that excludes knowledge as well as happiness; Government by monks, who know nothing of the world beyond the walls of a convent, is as inconsistent as Government by Kings.

What we formerly called Revolutions, were little more than a change of persons, or an alteration of local circumstances. They rose and fell like things of course, and had nothing in their existence or their fate that could influence beyond the spot that produced them. But what we now see in the world, from the Revolutions of America and France, are a renovation of the natural order of things, a system of principles as universal as truth and the existence of man, and combining moral with political happiness and national prosperity.

I. Men are born, and always continue, free and equal in respect of their rights. Civil distinctions, therefore, can be founded only on public utility.

II. The end of all political associations is the preservation of the natural and imprescriptible rights of man; and these rights are liberty, property, security, and resistance of oppression.

III. The Nation is essentially the source of all sovereignty; nor can ANY INDIVIDUAL, or ANY BODY OF MEN, be entitled to any authority which is not expressly derived from it."

In these principles there is nothing to throw a Nation into confusion by inflaming ambition. They are calculated to call forth wisdom and abilities, and to exercise them for the public good, and not for the emolument or aggrandisement of particular descriptions of men or families. Monarchical sovereignty, the enemy of mankind, and the source of misery, is abolished; and sovereignty itself is restored to its natural and original place, the Nation. Were this the case throughout Europe, the cause of wars would be taken away.

It is attributed to Henry the Fourth of France, a man of enlarged and benevolent heart, that he proposed, about the year 1610, a plan for abolishing war in Europe: the plan consisted in constituting an European Congress, or as the French authors stile it, a Pacific Republic, by appointing delegates from the several Nations who were to act as a Court of Arbitration in any disputes that might arise between Nation and Nation.

Had such a plan been adopted at the time it was proposed, the taxes of England and France, as two of the parties, would have been at least ten millions sterling annually to each nation less than they were at the commencement of the French Revolution.

To conceive a cause why such a plan has not been adopted (and that instead of a Congress for the purpose of *preventing* war, it has been called only to *terminate* a war, after a fruitless expence of several years), it will be necessary to consider the interest of Governments as a distinct interest to that of Nations.

Whatever is the cause of taxes to a Nation, becomes also the means of revenue to a Government. Every war terminates with an addition of taxes, and consequently with an addition of revenue; and in any event of war, in the manner they are now commenced and concluded, the power and interest of Governments are increased. War, therefore, from its productiveness, as it easily furnishes the pretence of necessity for taxes and appointments to places and offices, becomes a principal part of the system of old Governments; and to establish any mode to abolish war, however advantageous it might be to Nations, would be to take from such Government the most lucrative of its branches. The frivolous matters upon which war is made shew the disposition and avidity of Governments to uphold the system of war, and betray the motives upon which they act.

Why are not Republics plunged into war, but because the nature of their Government does not admit of an interest distinct from that of the Nation? Even Holland, though an ill-constructed Republic, and with a commerce extending over the world, existed nearly a century without war; and the instant the form of Government was changed in France the republican principles of peace and domestic prosperity and economy arose with the new Government; and the same consequences would follow the same causes in other nations.

As war is the system of Government on the old construction, the animosity which Nations reciprocally entertain is nothing more than what the policy of their Governments excites to keep up the spirit of the system. Each Government accuses the other of perfidy, intrigue, and ambition, as a means of heating the imagination of their respective Nations, and incensing them to hostilities. Man is not the enemy of Man, but through the medium of a false system of Government. Instead, therefore, of exclaiming against the ambition of Kings, the exclamation should be directed against the principle of such Governments; and instead of seeking to reform the individual, the wisdom of a Nation should apply itself to reform the system.

Whether the forms and maxims of Governments which are still in practice were adapted to the condition of the world at the period they were established is not in this case the question. The older they are the less correspondence can they have with the present state of things.

Time, and change of circumstances and opinions, have the same progressive effect in rendering modes of Government obsolete as they have upon customs and manners. Agriculture, commerce, manufactures, and the tranquil arts, by which the prosperity of Nations is best promoted, require a different system of Government, and a different species of knowledge to direct its operations, than what might have been required in the former condition of the world.

As it is not difficult to perceive, from the enlightened state of mankind, that hereditary Governments are verging to their decline, and that Revolutions on the broad basis of national sovereignty and Government by representation, are making their way in Europe, it would be an act of wisdom to anticipate their approach, and produce Revolutions by reason and accommodation, rather than commit them to the issue of convulsions.

From what we now see, nothing of reform in the political world ought to be held improbable. It is an age of Revolutions, in which everything may be looked for.

The intrigue of Courts, by which the system of war is kept up, may provoke a confederation of Nations to abolish it; and an European Congress to patronize the progress of free Government, and promote the civilisation of Nations with each other, is an event nearer in probability than once were the Revolutions and Alliance of France and America.

Rights of Man

PART THE SECOND

TO M. DE LA FAYETTE

AFTER an acquaintance of nearly fifteen years in difficult situations in America, and various consultations in Europe, I feel a pleasure in presenting to you this small treatise in gratitude for your services to my beloved America, and as a testimony of my esteem for the virtues, public and private, which I know you to possess.

The only point upon which I could ever discover that we differed was not as to principles of Government, but as to time. For my own part I

think it equally as injurious to good principles to permit them to linger, as to push them on too fast. That which you suppose accomplishable in fourteen or fifteen years I may believe practicable in a much shorter period. Mankind, as it appears to me, are always ripe enough to understand their true interest, provided it be presented clearly to their understanding, and that in a manner not to create suspicion by anything like self-design, nor offend by assuming too much. Where we would wish to reform we must not reproach.

When the American Revolution was established I felt a disposition to sit serenely down and enjoy the calm. It did not appear to me that any object could afterwards arise great enough to make me quit tranquillity and feel as I had felt before. But when principle, and not place, is the energetic cause of action, a man, I find, is everywhere the same.

I am now once more in the public world; and as I have not a right to contemplate on so many years of remaining life as you have, I am resolved to labour as fast as I can; and as I am anxious for your aid and your company, I wish you to hasten your principles and overtake me.

If you make a campaign the ensuing spring, which it is most probable there will be no occasion for, I will come and join you. Should the campaign commence, I hope it will terminate in the extinction of German despotism, and in establishing the freedom of all Germany. When France shall be surrounded with Revolutions she will be in peace and safety, and her taxes, as well as those of Germany, will consequently become less.

Your sincere,

Affectionate friend,

THOMAS PAINE.

LONDON, February 9, 1792.

PREFACE

WHEN I began the chapter entitled the *Conclusion* in the former part of the RIGHTS OF MAN, published last year, it was my intention to have extended it to a greater length; but in casting the whole matter in my mind which I wish to add, I found that it must either make the work too bulky, or contract my plan too much. I therefore brought it to a close as soon as the subject would admit, and reserved what I had further to say to another opportunity.

Several other reasons contributed to produce this determination. I wished to know the manner in which a work, written in a style of thinking and expression different to what had been customary in England,

would be received before I proceeded farther. A great field was opening to the view of mankind by means of the French Revolution. Mr. Burke's outrageous opposition thereto brought the controversy into England. He attacked principles which he knew (from information) I would contest with him, because they are principles I believe to be good, and which I have contributed to establish, and conceive myself bound to defend. Had he not urged the controversy, I had most probably been a silent man.

Another reason for deferring the remainder of the work was, that Mr. Burke promised in his first publication to renew the subject at another opportunity, and to make a comparison of which he called the English and French Constitutions. I therefore held myself in reserve for him. He has published two works since, without doing this: which he certainly would not have omitted, had the comparison been in his favour.

In his last work, his "*Appeal from the new to the old Whigs*," he has quoted about ten pages from the *Rights of Man*, and having given himself the trouble of doing this, says he shall "not attempt in the smallest degree to refute them," meaning the principles therein contained. I am enough acquainted with Mr. Burke to know that he would if he could. But instead of contesting them, he immediately after consoles himself with saying that "he has done his part." He has not done his part. He has not performed his promise of a comparison of Constitutions. He started the controversy, he gave the challenge, and has fled from it; and he is now a case in point with his own opinion that "*the age of chivalry is gone!*"

The title as well as the substance of his last work, his "*Appeal*," is his condemnation. Principles must stand on their own merits, and if they are good they certainly will. To put them under the shelter of other men's authority, as Mr. Burke has done, serves to bring them into suspicion. Mr. Burke is not very fond of dividing his honours, but in this case he is artfully dividing the disgrace.

But who are those to whom Mr. Burke has made his appeal? A set of childish thinkers, and half-way politicians born in the last century, men who went no farther with any principle than as it suited their purpose as a party; the Nation was always left out of the question; and this has been the character of every party from that day to this. The nation sees nothing in such works, or such politics, worthy its attention. A little matter will move a party, but it must be something great that moves a Nation.

Though I see nothing in Mr. Burke's *Appeal* worth taking much notice of, there is, however, one expression upon which I shall offer a few remarks. After quoting largely from the *Rights of Man*, and declining to contest the principles contained in that work, he says: "This will most

probably be done (*if such writings shall be thought to deserve any other refutation than that of criminal justice*) by others, who may think with Mr. Burke and with the same zeal."

In the first place, it has not yet been done by anybody. Not less, I believe, than eight or ten pamphlets intended as answers to the former part of the *Rights of Man* have been published by different persons, and not one of them to my knowledge has extended to a second edition, nor are even the titles of them so much as generally remembered. As I am averse to unnecessarily multiplying publications, I have answered none of them. And as I believe that a man may write himself out of reputation when nobody else can do it, I am careful to avoid that rock.

But as I would decline unnecessary publications on the one hand, so would I avoid everything that might appear like sullen pride on the other. If Mr. Burke, or any person on his side the question, will produce an answer to the *Rights of Man* that shall extend to a half, or even to a fourth part of the number of copies to which the *Rights of Man* extended, I will reply to his work. But until this be done, I shall so far take the sense of the public for my guide (and the world knows I am not a flatterer) that what they do not think worth while to read, is not worth mine to answer. I suppose the number of copies to which the first part of the *Rights of Man* extended, taking England, Scotland, and Ireland, is not less than between forty and fifty thousand.

I now come to remark on the remaining part of the quotation I have made from Mr. Burke.

"If," says he, "such writing shall be thought to deserve any other refutation than that of *criminal justice*."

Pardoning the pun, it must be *criminal justice* indeed that should condemn a work as a substitute for not being able to refute it. The greatest condemnation that could be passed upon it would be a refutation. But in proceeding by the method Mr. Burke alludes to, the condemnation would, in the final event, pass upon the criminality of the process and not upon the work, and in this case, I had rather be the author, than be either the judge or the jury that should condemn it.

But to come at once to the point. I have differed from some professional gentlemen on the subject of prosecutions, and I since find they are falling into my opinion, which I will here state as fully, but as concisely as I can.

I will first put a case with respect to any law, and then compare it with a Government, or with what in England is, or has been, called a Constitution.

It would be an act of despotism, or what in England is called arbitrary power, to make a law to prohibit investigating the principles, good or bad, on which such a law, or any other, is founded.

If a law be bad it is one thing to oppose the practice of it, but it is quite a different thing to expose its errors, to reason on its defects, and to shew cause how it should be repealed, or why another ought to be substituted in its place. I have always held it an opinion (making it also my practice) that it is better to obey a bad law, making use at the same time of every argument to show its errors and procure its repeal, than forcibly to violate it; because the precedent of breaking a bad law might weaken the force, and lead to a discretionary violation of those which are good.

The case is the same with respect to principles and forms of Government, or to what are called Constitutions and the parts of which they are composed.

It is for the good of Nations and not for the emolument or aggrandisement of particular individuals, that Government ought to be established, and that mankind are at the expence of supporting it. The defects of every Government and Constitution, both as to principle and form, must on a parity of reasoning, be as open to discussion as the defects of a law, and it is a duty which every man owes to society to point them out. When those defects, and the means of remedying them, are generally seen by a Nation, that Nation will reform its Government or its Constitution in the one case, as the Government repealed or reformed the law in the other. The operation of Government is restricted to the making and the administering of laws; but it is to a Nation that the right of forming or reforming, generating or regenerating, Constitutions and Governments belong; and consequently those subjects, as subjects of investigation, are always before a country *as a matter of right*, and cannot, without invading the general rights of that country, be made subjects for prosecution. On this ground I will meet Mr. Burke whenever he pleases. It is better that the whole argument should come out than to seek to stifle it. It was himself that opened the controversy, and he ought not to desert it.

I do not believe that Monarchy and Aristocracy will continue seven years longer in any of the enlightened countries in Europe. If better reasons can be shewn for them than against them, they will stand; if the contrary, they will not. Mankind are not now to be told they shall not think or they shall not read; and publications that go no further than to investigate principles of Government, to invite men to reason and to reflect and to shew the errors and excellencies of different systems, have a right to appear. If they do not excite attention, they are not worth the

trouble of a prosecution, and if they do the prosecution will amount to nothing, since it cannot amount to a prohibition of reading. This would be a sentence on the public instead of the author, and would also be the most effectual mode of making or hastening Revolutions.

On all cases that apply universally to a Nation with respect to systems of Government, a jury of *twelve* men is not competent to decide. Where there are no witnesses to be examined, no facts to be proved, and where the whole matter is before the whole public, and the merits or demerits of it resting on their opinion; and where there is nothing to be known in a court, but what everybody knows out of it, any twelve men is equally as good a jury as the other, and would most probably reverse another's verdict; or, from the variety of their opinions, not be able to form one. It is one case whether a Nation approve a work or a plan: but it is quite another case whether it will commit to any such jury the power of determining whether that Nation have a right to or shall reform its Government or not. I mention those cases that Mr. Burke may see I have not written on Government without reflecting on what is Law, as well as on what are Rights. The only effectual jury in such cases would be a convention of the whole Nation fairly elected; for in all such cases the whole Nation is the vicinage. If Mr. Burke will propose such a jury I will waive all privileges of being the citizen of another country, and, defending its principles, abide the issue, provided he will do the same; for my opinion is that his work and his principles would be condemned instead of mine.

As to the prejudices which men have from education and habit, in favour of any particular form or system of Government, those prejudices have yet to stand the test of reason and reflection. In fact, such prejudices are nothing. No man is prejudiced in favour of a thing knowing it to be wrong. He is attached to it on the belief of its being right, and when he sees it is not so, the prejudice will be gone. We have but a defective idea of what prejudice is. It might be said that until men think for themselves the whole is prejudice, and *not opinion*: for that only is opinion which is the result of reason and reflection. I offer this remark that Mr. Burke may not confide too much in what have been the customary prejudices of the country.

I do not believe that the people of England have ever been fairly and candidly dealt by. They have been imposed on by parties and by men assuming the character of leaders. It is time that the Nation should rise above those trifles. It is time to dismiss that inattention which has so long been the encouraging cause of stretching taxation to excess. It is time to dismiss all those songs and toasts which are calculated to enslave,

and operate to suffocate reflection. On all such subjects men have but to think and they will neither act wrong nor be misled. To say that any people are not fit for freedom is to make poverty their choice, and to say they had rather be loaded with taxes than not. If such a case could be proved it would equally prove that those who govern are not fit to govern them, for they are a part of the same national mass.

But admitting Governments to be changed all over Europe; it certainly may be done without convulsion or revenge. It is not worth making changes or Revolutions, unless it be for some great national benefit: and when this shall appear to a Nation the danger will be as in America and France, to those who oppose; and with this reflection I close my preface.

THOMAS PAINE.

LONDON, *February 9, 1792.*

INTRODUCTION

WHAT Archimedes said of the mechanical powers may be applied to reason and liberty. "*Had we,*" said he, "*a place to stand upon, we might raise the world.*"

The Revolution of America presented in politics what was only theory in mechanics. So deeply rooted were all the Governments of the old world, and so effectually had the tyranny and the antiquity of habit established itself over the mind, that no beginning could be made in Asia, Africa, or Europe, to reform the political condition of man. Freedom had been hunted round the globe; reason was considered as rebellion; and the slavery of fear had made men afraid to think.

But such is the irresistible nature of truth that all it asks, and all it wants, is the liberty of appearing. The sun needs no inscription to distinguish him from darkness; and no sooner did the American Governments display themselves to the world than despotism felt a shock and man began to contemplate redress.

The Independence of America, considered merely as a separation from England, would have been a matter of but little importance, had it not been accompanied by a Revolution in the principles and practice of Governments. She made a stand, not for herself only, but for the world, and looked beyond the advantages herself could receive. Even the Hessian, though hired to fight against her, may live to bless his defeat; and England, condemning the viciousness of its Government, rejoice in its miscarriage.

As America was the only spot in the political world where the principles of universal reformation could begin, so also was it the best in the natural world. An assemblage of circumstances conspired not only to give birth, but to add gigantic maturity to its principles. The scene which that country presents to the eye of a spectator has something in it which generates and encourages great ideas. Nature appears to him in magnitude. The mighty objects he beholds act upon his mind by enlarging it, and he partakes of the greatness he contemplates. Its first settlers were emigrants from different European Nations, and of diversified professions of religion, retiring from the governmental persecutions of the old world, and meeting in the new, not as enemies, but as brothers. The wants which necessarily accompany the cultivation of a wilderness produced among them a state of society which countries long harassed by the quarrels and intrigues of Governments had neglected to cherish. In such a situation man becomes what he ought. He sees his species, not with the inhuman idea of a natural enemy, but as kindred; and the example shows to the artificial world that man must go back to nature for information.

From the rapid progress which America makes in every species of improvement, it is rational to conclude that, if the Governments of Asia, Africa, and Europe had begun on a principle similar to that of America, or had not been very early corrupted therefrom, those countries must by this time have been in a far superior condition to what they are. Age after age has passed away, for no other purpose than to behold their wretchedness. Could we suppose a spectator who knew nothing of the world, and who was put into it merely to make his observations, he would take a great part of the old world to be new, just struggling with the difficulties and hardships of an infant settlement. He could not suppose that the hordes of miserable poor with which old countries abound could be any other than those who had not yet had time to provide for themselves. Little would he think they were the consequence of what in such countries is called Government.

If, from the more wretched parts of the old world, we look at those which are in an advanced stage of improvement, we still find the greedy hand of Government thrusting itself into every corner and crevice of industry, and grasping the spoil of the multitude. Invention is continually exercised to furnish new pretences for revenue and taxation. It watches prosperity as its prey, and permits none to escape without a tribute.

As Revolutions have begun (and as the probability is always greater against a thing beginning than of proceeding after it has begun), it is natural to expect that other Revolutions will follow. The amazing and

still increasing expences with which old Governments are conducted, the numerous wars they engage in or provoke, the embarrassments they throw in the way of universal civilization and commerce, and the oppression and usurpation they practise at home, have wearied out the patience and exhausted the property of the world. In such a situation and with the examples already existing, Revolutions are to be looked for. They are become subjects of universal conversation, and may be considered as the *Order of the Day*.

If systems of Government can be introduced less expensive and more productive of general happiness than those which have existed, all attempts to oppose their progress will in the end be fruitless. Reason, like time, will make its own way, and prejudice will fall in a combat with interest. If universal peace, civilization, and commerce are ever to be the happy lot of man, it cannot be accomplished but by a Revolution in the system of Governments. All the monarchical Governments are military. War is their trade, plunder and revenue their objects. While such Governments continue, peace has not the absolute security of a day. What is the history of all monarchical Governments but a disgusting picture of human wretchedness, and the accidental respite of a few years' repose? Wearied with war, and tired with human butchery, they sat down to rest, and called it peace. This certainly is not the condition that heaven intended for man; and if *this be Monarchy*, well might Monarchy be reckoned among the sins of the Jews.

The Revolutions which formerly took place in the world had nothing in them that interested the bulk of mankind. They extended only to a change of persons and measures, but not of principles, and rose or fell among the common transactions of the moment. What we now behold may not improperly be called a "*counter Revolution*." Conquest and tyranny, at some early period, dispossessed man of his rights, and he is now recovering them. And as the tide of all human affairs has its ebb and flow in directions contrary to each other, so also is it in this. Government founded on a *moral theory, on a system of universal peace, on the indefeasible hereditary Rights of Man*, is now revolving from west to east by a stronger impulse than the Government of the sword revolved from east to west. It interests not particular individuals, but Nations in its progress, and promises a new era to the human race.

The danger to which the success of Revolutions is most exposed is that of attempting them before the principles on which they proceed, and the advantages to result from them, are sufficiently seen and understood. Almost everything appertaining to the circumstances of a Nation, has

been absorbed and confounded under the general and mysterious word *Government*. Though it avoids taking to its account the errors it commits, and the mischiefs it occasions, it fails not to arrogate to itself whatever has the appearance of prosperity. It robs industry of its honours, by pedantically making itself the cause of its effects; and purloins from the general character of man, the merits that appertain to him as a social being.

It may therefore be of use in this day of Revolutions to discriminate between those things which are the effect of Government, and those which are not. This will best be done by taking a review of society and civilisation, and the consequences resulting therefrom, as things distinct from what are called Governments. By beginning with this investigation, we shall be able to assign effects to their proper cause and analyze the mass of common errors.

OF SOCIETY AND CIVILISATION

GREAT part of that order which reigns among mankind is not the effect of Government. It has its origin in the principles of society and the natural constitution of man. It existed prior to Government, and would exist if the formality of Government was abolished. The mutual dependence and reciprocal interest which man has upon man, and all the parts of a civilised community upon each other, create that great chain of connection which holds it together. The landholder, the farmer, the manufacturer, the merchant, the tradesman, and every occupation, prospers by the aid which each receives from the other, and from the whole. Common interest regulates their concerns, and forms their law; and the laws which common usage ordains, have a greater influence than the laws of Government. In fine, society performs for itself almost everything which is ascribed to Government.

To understand the nature and quantity of Government proper for man, it is necessary to attend to his character. As nature created him for social life, she fitted him for the station she intended. In all cases she made his natural wants greater than his individual powers. No one man is capable, without the aid of society, of supplying his own wants; and those wants, acting upon every individual, impel the whole of them into society, as naturally as gravitation acts to a centre.

But she has gone further. She has not only forced man into society by a diversity of wants which the reciprocal aid of each other can supply, but she has implanted in him a system of social affections, which, though not

necessary to his existence, are essential to his happiness. There is no period in life when this love for society ceases to act. It begins and ends with our being.

If we examine with attention the composition and constitution of man, the diversity of his wants and talents in different men for reciprocally accommodating the wants of each other, his propensity to society, and consequently to preserve the advantages resulting from it, we shall easily discover that a great part of what is called Government is mere imposition.

Government is no farther necessary than to supply the few cases to which society and civilisation are not conveniently competent; and instances are not wanting to show, that everything which Government can usefully add thereto, has been performed by the common consent of society, without Government.

For upwards of two years from the commencement of the American War, and to a longer period in several of the American States, there were no established forms of Government. The old Governments had been abolished, and the country was too much occupied in defence to employ its attention in establishing new Governments; yet during this interval order and harmony were preserved as inviolate as in any country in Europe. There is a natural aptness in man, and more so in society, because it embraces a greater variety of abilities and resources, to accommodate itself to whatever situation it is in. The instant formal Government is abolished, society begins to act: a general association takes place, and common interest produces common security.

So far is it from being true, as has been pretended, that the abolition of any formal Government is the dissolution of society, that it acts by a contrary impulse, and brings the latter the closer together. All that part of its organization which it had committed to its Government, devolves again upon itself, and acts through its medium. When men, as well from natural instinct as from reciprocal benefits, have habituated themselves to social and civilised life, there is always enough of its principles in practice to carry them through any changes they may find necessary or convenient to make in their Government. In short, man is so naturally a creature of society that it is almost impossible to put him out of it.

Formal Government makes but a small part of civilised life; and when even the best that human wisdom can devise is established, it is a thing more in name and idea than in fact. It is to the great and fundamental principles of society and civilisation—to the common usage universally consented to, and mutually and reciprocally maintained—to the un-

ceasing circulation of interest, which passing through its million channels, invigorates the whole mass of civilised man—it is to these things, infinitely more than to anything which even the best instituted Government can perform, that the safety and prosperity of the individual and of the whole depends.

The more perfect civilisation is, the less occasion has it for Government, because the more it does regulate its own affairs, and govern itself; but so contrary is the practice of old Governments to the reason of the case, that the expences of them increase in the proportion they ought to diminish. It is but few general laws that civilised life requires, and those of such common usefulness, that whether they are enforced by the forms of government or not, the effect will be nearly the same. If we consider what the principles are that first condense men into society, and what the motives that regulate their mutual intercourse afterwards, we shall find, by the time we arrive at what is called Government, that nearly the whole of the business is performed by the natural operation of the parts upon each other.

Man, with respect to all those matters, is more a creature of consistency than he is aware, or that Governments would wish him to believe. All the great laws of society are laws of nature. Those of trade and commerce, whether with respect to the intercourse of individuals or of nations, are laws of mutual and reciprocal interests. They are followed and obeyed, because it is the interest of the parties so to do, and not on account of any formal laws their Governments may impose or interpose.

But how often is the natural propensity to society disturbed or destroyed by the operations of Government! When the latter, instead of being ingrafted on the principles of the former, assumes to exist for itself, and acts by partialities of favour and oppression, it becomes the cause of the mischiefs it ought to prevent.

If we look back to the riots and tumults which at various times have happened in England, we shall find that they did not proceed from the want of a Government, but that Government was itself the generating cause: instead of consolidating society it divided it; it deprived it of its natural cohesion, and engendered discontents and disorders which otherwise would not have existed. In those associations, which men promiscuously form for the purpose of trade, or of any concern in which Government is totally out of the question, and in which they act merely on the principles of society, we see how naturally the various parties unite; and this shows, by comparison, that Governments, so far from being always the cause or means of order, are often the destruction

of it. The riots of 1780 had no other source than the remains of those prejudices which the Government of itself had encouraged. But with respect to England there are also other causes.

Excess and inequality of taxation, however disguised in the means, never fail to appear in their effects. As a great mass of the community are thrown thereby into poverty and discontent, they are constantly on the brink of commotion; and deprived, as they unfortunately are, of the means of information, are easily heated to outrage. Whatever the apparent cause of any riots may be, the real one is always want of happiness. It shows that something is wrong in the system of Government that injures the felicity by which society is to be preserved.

But as fact is superior to reasoning, the instance of America presents itself to confirm these observations. If there is a country in the world where concord, according to common calculation, would be least expected, it is America. Made up as it is of people from different nations, accustomed to different forms and habits of Government, speaking different languages, and more different in their modes of worship, it would appear that the union of such a people was impracticable; but by the simple operation of constructing Government on the principles of Society and the rights of man, every difficulty retires, and all the parts are brought into cordial unison. There the poor are not oppressed, the rich are not privileged. Industry is not mortified by the splendid extravagance of a Court rioting at its expence. Their taxes are few, because their Government is just: and as there is nothing to render them wretched, there is nothing to engender riots and tumults.

A metaphysical man, like Mr. Burke, would have tortured his invention to discover how such a people could be governed. He would have supposed that some must be managed by fraud, others by force, and all by some contrivance; that genius must be hired to impose upon ignorance, and show and parade to fascinate the vulgar. Lost in the abundance of his researches, he would have resolved and re-resolved, and finally overlooked the plain and easy road that lay directly before him.

One of the great advantages of the American Revolution has been, that it led to a discovery of the principles, and laid open the imposition of Governments. All the Revolutions till then had been worked within the small sphere of a Court, and never on the great floor of a Nation. The parties were always of the class of courtiers; and whatever was their rage for reformation, they carefully preserved the fraud of the profession.

In all cases they took care to represent Government as a thing made up of mysteries, which only themselves understood; and they hid from

the understanding of the Nation the only thing that was beneficial to know, namely, *that Government is nothing more than a national association acting on the principles of society.*

Having thus endeavoured to show that the social and civilised state of man is capable of performing within itself almost everything necessary to its protection and Government, it will be proper, on the other hand, to take a review of the present old Governments, and examine whether their principles and practice are correspondent thereto.

OF THE ORIGIN OF THE PRESENT OLD GOVERNMENTS

IT IS impossible that such Governments as have hitherto existed in the world, would have commenced by any other means than a total violation of every principle, sacred and moral. The obscurity in which the origin of all the present old Governments is buried, implies the iniquity and disgrace with which they began. The origin of the present Government of America and France will ever be remembered, because it is honourable to record it; but with respect to the rest, even flattery has consigned them to the tomb of time, without an inscription.

It could have been no difficult thing in the early and solitary ages of the world, while the chief employment of men was that of attending flocks and herds, for a banditti of ruffians to overrun a country and lay it under contributions. Their power being thus established the chief of the band contrived to lose the name of Robber in that of Monarch; and hence the origin of Monarchy and Kings.

The origin of the Government of England, so far as relates to what is called its line of Monarchy, being one of the latest, is perhaps the best recorded. The hatred which the Norman invasion and tyranny begat, must have been deeply rooted in the nation, to have outlived the contrivance to obliterate it. Though not a courtier will talk of the curfeu-bell, not a village in England has forgotten it.

Those bands of robbers having parcelled out the world, and divided it into dominions, began, as is naturally the case, to quarrel with each other. What at first was obtained by violence was considered by others as lawful to be taken, and a second plunderer succeeded the first. They alternately invaded the dominions which each had assigned to himself, and the brutality with which they treated each other explains the original character of monarchy. It was ruffian torturing ruffian. The conqueror considered the conquered, not as his prisoner, but his property. He led him

in triumph rattling in chains, and doomed him, at pleasure, to slavery or death. As time obliterated the history of their beginning, their successors assumed new appearances, to cut off the entail of their disgrace, but their principles and objects remained the same. What at first was plunder, assumed the softer name of revenue; and the power originally usurped, they affected to inherit.

From such beginning of Governments, what could be expected but a continual system of war and extortion? It has established itself into a trade. The vice is not peculiar to one more than to another, but is the common principle of all. There does not exist within such Governments sufficient stamina whereon to engraft reformation; and the shortest, easiest, and most effectual remedy is to begin anew on the ground of the oration.

What scenes of horror, what perfection of iniquity, present themselves in contemplating the character and reviewing the history of such Governments! If we would delineate human nature with a baseness of heart and hypocrisy of countenance that reflection would shudder at and humanity disown, it is Kings, Courts, and Cabinets that must sit for the portrait. Man, naturally as he is, with all his faults about him, is not up to the character.

Can we possibly suppose that if Governments had originated in a right principle, and had not an interest in pursuing a wrong one, the world could have been in the wretched and quarrelsome condition we have seen it? What inducement has the farmer, while following the plough, to lay aside his peaceful pursuits, and go to war with the farmer of another country? or what inducement has the manufacturer? What is dominion to them, or to any class of men in a nation? Does it add an acre to any man's estate, or raise its value? Are not conquest and defeat each of the same price, and taxes the never-failing consequence? Though this reasoning may be good to a Nation, it is not so to a Government. War is the Pharo table of Governments, and Nations the dupes of the games.

If there is anything to wonder at in this miserable scene of Governments more than might be expected, it is the progress which the peaceful arts of agriculture, manufacture and commerce have made beneath such a long accumulating load of discouragement and oppression. It serves to show that instinct in animals does not act with stronger impulse than the principles of society and civilization operate in man. Under all discouragements, he pursues his object, and yields to nothing but impossibilities.

OF THE OLD AND NEW SYSTEMS OF GOVERNMENT

Nothing can appear more contradictory than the principles on which the old Governments began, and the condition to which society, civilization and commerce are capable of carrying mankind. Government, on the old system, is an assumption of power, for the aggrandizement of itself; on the new a delegation of power for the common benefit of society. The former supports itself by keeping up a system of war; the latter promotes a system of peace, as the true means of enriching a Nation. The one encourages national prejudices; the other promotes universal society, as the means of universal commerce. The one measures its prosperity by the quantity of revenue it extorts; the other proves its excellence by the small quantity of taxes it requires.

Mr. Burke has talked of old and new whigs. If he can amuse himself with childish names and distinctions, I shall not interrupt his pleasure. It is not to him, but to the Abbé Sieyès, that I address this chapter. I am already engaged to the latter gentleman to discuss the subject of monarchical Government; and as it naturally occurs in comparing the old and new systems, I make this the opportunity of presenting to him my observations. I shall occasionally take Mr. Burke in my way.

Though it might be proved that the system of Government now called the NEW is the most ancient in principle of all that have existed, being founded on the original inherent Rights of Man; yet, as tyranny and the sword have suspended the exercise of those rights for many centuries past, it serves better the purpose of distinction to call it the *new* than to claim the right of calling it the old.

The first general distinction between those two systems is that the one now called the old is *hereditary*, either in whole or in part; and the new is entirely *representative*. It rejects all hereditary Government:

First, As being an imposition on mankind.

Secondly, As inadequate to the purposes for which Government is necessary.

With respect to the first of these heads—It cannot be proved by what right hereditary Government could begin; neither does there exist within the compass of mortal power a right to establish it. Man has no authority over posterity in matters of personal right; and, therefore, no man or body of men had, or can have, a right to set up hereditary Government. Were even ourselves to come again into existence, instead of being succeeded by posterity, we have not now the right of taking from ourselves

the rights which would then be ours. On what ground, then, do we pretend to take them from others?

All hereditary Government is in its nature tyranny. An heritable crown, or an heritable throne, or by what other fanciful name such things may be called, have no other significant explanation than that mankind are heritable property. To inherit a Government, is to inherit the people, as if they were flocks and herds.

With respect to the second head, that of being inadequate to the purposes for which Government is necessary, we have only to consider what Government essentially is, and compare it with the circumstances to which hereditary succession is subject.

Government ought to be a thing always in full maturity. It ought to be so constructed as to be superior to all the accidents to which individual man is subject; and, therefore, hereditary succession, by being *subject to them all*, is the most irregular and imperfect of all the systems of Government.

We have heard the *Rights of Man* called a *levelling* system; but the only system to which the word *levelling* is truly applicable, is the hereditary monarchical system. It is a system of *mental levelling*. It indiscriminately admits every species of character to the same authority. Vice and virtue, ignorance and wisdom, in short, every quality, good or bad, is put on the same level. Kings succeed each other, not as rationals, but as animals. It signifies not what their mental or moral characters are. Can we then be surprised at the abject state of the human mind in monarchical countries, when the Government itself is formed on such an abject levelling system? It has no fixed character. To-day it is one thing; to-morrow it is something else. It changes with the temper of every succeeding individual, and is subject to all the varieties of each. It is Government through the medium of passions and accidents. It appears under all the various characters of childhood, decrepitude, dotage; a thing at nurse, in leading-strings, or in crutches. It reverses the wholesome order of nature. It occasionally puts children over men, and the conceits of nonage over wisdom and experience. In short, we cannot conceive a more ridiculous figure of Government, than hereditary succession, in all its cases, presents.

Could it be made a decree in nature, or an edict registered in heaven, and man could know it, that virtue and wisdom should invariably appertain to hereditary succession, the objections to it would be removed; but when we see that nature acts as if she disowned and sported with the hereditary system; that the mental characters of successors, in all coun-

tries, are below the average of human understanding; that one is a tyrant, another an idiot, a third insane, and some all three together, it is impossible to attach confidence to it, when reason in man has power to act.

It is not to the Abbé Sieyes that I need apply this reasoning; he has already saved me that trouble by giving his own opinion upon the case. "If it be asked," says he, "what is my opinion with respect to hereditary right, I answer, without hesitation, that, in good theory, an hereditary transmission of any power or office, can never accord with the laws of a true representation. Hereditaryship is, in this sense, as much an attain upon principle, as an outrage upon society. But let us," continues he, "refer to the history of all elective monarchies and principalities: is there one in which the elective mode is not worse than the hereditary succession?"

As to debating on which is the worse of the two, it is admitting both to be bad: and herein we are agreed. The preference which the Abbé has given is a condemnation of the thing that he prefers. Such a mode of reasoning on such a subject is inadmissible, because it finally amounts to an accusation upon Providence, as if she had left to man no other choice with respect to Government than between two evils, the best of which he admits to be "an attain upon principle, and an outrage upon society."

Passing over for the present all the evils and mischiefs which monarchy has occasioned in the world, nothing can more effectually prove its uselessness in a state of *civil government*, than making it hereditary. Would we make any office hereditary that required wisdom and abilities to fill it? and where wisdom and abilities are not necessary, such an office, whatever it may be, is superfluous or insignificant.

Hereditary succession is a burlesque upon monarchy. It puts it in the most ridiculous light, by presenting it as an office which any child or idiot may fill. It requires some talents to be a common mechanic; but to be a King requires only the animal figure of man—a sort of breathing automaton. This sort of superstition may last a few years more, but it cannot long resist the awakened reason and interest of man.

As to Mr. Burke, he is a stickler for monarchy, not altogether as a pensioner, if he is one, which I believe, but as a political man. He has taken up a contemptible opinion of mankind, who, in their turn, are taking up the same of him. He considers them as a herd of beings that must be governed by fraud, effigy, and show; and an idol would be as good a figure of monarchy with him as a man. I will, however, do him the justice to say that, with respect to America, he has been very compli-

mentary. He always contended, at least in my hearing, that the people of America were more enlightened than those of England, or of any country in Europe; and that therefore the imposition of shew was not necessary in their Governments.

Though the comparison between hereditary and elective monarchy, which the Abbé has made, is unnecessary to the case, because the representative system rejects both; yet, were I to make the comparison, I should decide contrary to what he has done.

The civil wars which have originated from contested hereditary claims are more numerous, and have been more dreadful, and of longer continuance, than those which have been occasioned by election. All the civil wars in France arose from the hereditary system; they were either produced by hereditary claims, or by the imperfection of the hereditary form, which admits of regencies, or monarchy at nurse. With respect to England, its history is full of the same misfortunes. The contests for succession between the houses of York and Lancaster, lasted a whole century; and others of a similar nature have renewed themselves since that period. Those of 1715 and 1745 were of the same kind. The succession war for the crown of Spain embroiled almost half Europe. The disturbances in Holland are generated from the hereditaryship of the Stadtholder. A Government calling itself free, with an hereditary office, is like a thorn in the flesh, that produces a fermentation which endeavours to discharge it.

But I might go further, and place also foreign wars, of whatever kind, to the same cause. It is by adding the evil of hereditary succession to that of monarchy, that a permanent family interest is created, whose constant objects are dominion and revenue. Poland, though an elective monarchy, has had fewer wars than those which are hereditary; and it is the only Government that has made a voluntary essay, though but a small one, to reform the condition of the country.

Having thus glanced at a few of the defects of the old, or hereditary systems of Government, let us compare it with the new, or representative system.

The representative system takes society and civilisation for its basis; nature, reason, and experience for its guide.

Experience, in all ages and in all countries, has demonstrated that it is impossible to controul nature in her distribution of mental powers. She gives them as she pleases. Whatever is the rule by which she, apparently to us, scatters them among mankind, that rule remains a secret to man. It would be as ridiculous to attempt to fix the hereditaryship of human beauty as of wisdom. Whatever wisdom constitutently is, it is like a seed-

less plant; it may be reared when it appears, but it cannot be voluntarily produced. There is always a sufficiency somewhere in the general mass of society for all purposes; but with respect to the parts of society, it is continually changing its place. It rises in one to-day, in another to-morrow, and has most probably visited in rotation every family of the earth, and again withdrawn.

As this is in the order of nature, the order of Government must necessarily follow it, or Government will, as we see it does, degenerate into ignorance. The hereditary system, therefore, is as repugnant to human wisdom as to human rights; and is as absurd as it is unjust.

As the republic of letters brings forward the best literary productions, by giving to genius a fair and universal chance; so the representative system of Government is calculated to produce the wisest laws, by collecting wisdom from where it can be found. I smile to myself when I contemplate the ridiculous insignificance into which literature and all the sciences would sink, were they made hereditary; and I carry the same idea into Governments. An hereditary governor is as inconsistent as an hereditary author. I know not whether Homer or Euclid had sons; but I will venture an opinion that if they had, and had left their works unfinished, those sons could not have completed them.

Do we need a stronger evidence of the absurdity of hereditary Government than is seen in the descendants of those men, in any line of life, who once were famous? Is there scarcely an instance in which there is not a total reverse of the character? It appears as if the tide of mental faculties flowed as far as it could in certain channels, and then forsook its course and arose in others. How irrational then is the hereditary system, which establishes channels of power, in company with which wisdom refuses to flow! By continuing this absurdity, man is perpetually in contradiction with himself; he accepts, for a King, or a chief magistrate, or a legislator, a person whom he would not elect for a constable.

It appears to general observation that Revolutions create genius and talents; but those events do no more than bring them forward. There is existing in man a mass of sense lying in a dormant state, and which, unless something excites to action, will descend with him, in that condition, to the grave. As it is to the advantage of society that the whole of the faculties should be employed, the construction of Government ought to be such as to bring forward by a quiet and regular operation, all that extent of capacity which never fails to appear in Revolutions.

This cannot take place in the insipid state of hereditary Government, not only because it prevents, but because it operates to benumb. When

the mind of a Nation is bowed down by any political superstition in its Government, such as hereditary succession is, it loses a considerable portion of its powers on all other subjects and objects. Hereditary succession requires the same obedience to ignorance as to wisdom; and when once the mind can bring itself to pay this indiscriminate reverence, it descends below the stature of mental manhood. It is fit to be great only in little things. It acts a treachery upon itself, and suffocates the sensations that urge to detection.

Though the ancient Governments present to us a miserable picture of the condition of man, there is one which above all others exempts itself from the general description. I mean the democracy of Athenians. We see more to admire, and less to condemn, in that great, extraordinary people than in anything which history affords.

Mr. Burke is so little acquainted with constituent principles of Government, that he confounds democracy and representation together. Representation was a thing unknown in the ancient democracies. In those the mass of the people met and enacted laws (grammatically speaking) in the first person. Simple democracy was no other than the common hall of the ancients. It signifies the *form* as well as the public principle of the Government. As those democracies increased in population, and the territory extended, the simple democratical form became unwieldy and impracticable; and as the system of representation was not known, the consequence was, they either degenerated convulsively into monarchies or became absorbed into such as then existed. Had the system of representation been then understood, as it now is, there is no reason to believe that those forms of Government now called monarchical or aristocratical would ever have taken place. It was the want of some method to consolidate the parts of society after it became too populous and too expensive for the simple democratical form, and also the lax and solitary condition of shepherds and herdsmen in other parts of the world, that afforded opportunities to those unnatural modes of Government to begin.

As it is necessary to clear away the rubbish of errors into which the subject of Government has been thrown, I shall proceed to remark on some others.

It has always been the political craft of courtiers and court-governments to abuse something which they called republicanism; but what republicanism was or is they never attempt to explain. Let us examine a little into this case.

The only forms of Government are the democratical, the aristocratical, the monarchical, and what is now called the representative.

What is called a *Republic* is not any *particular form* of Government. It is wholly characteristic of the purport, matter or object for which Government ought to be instituted, and on which it is to be employed: RES-PUBLICA, the public affairs, or the public good; or, literally translated, the *public thing*. It is a word of a good original, referring to what ought to be the character and business of Government; and in this sense it is naturally opposed to the word *monarchy*, which has a base original signification. It means arbitrary power in an individual person; in the exercise of which, *himself*, and not the *res-publica*, is the object.

Every Government that does not act on the principle of a *Republic*, or, in other words, that does not make the *res-publica* its whole and sole object, is not a good Government. Republican Government is no other than Government established and conducted for the interest of the public, as well individually as collectively. It is not necessarily connected with any particular form, but it most naturally associates with the representative form, as being best calculated to secure the end for which a Nation is at the expense of supporting it.

Various forms of Government have affected to stile themselves a Republic. Poland calls itself a Republic which is an hereditary Aristocracy, with what is called an elective Monarchy. Holland calls itself a Republic which is chiefly aristocratical, with an hereditary stadtholdership. But the Government of America, which is wholly on the system of representation, is the only real Republic, in character and in practice, that now exists. Its Government has no other object than the public business of the Nation, and therefore it is properly a Republic; and the Americans have taken care that THIS, and no other, shall always be the object of their Government, by their rejecting everything hereditary, and establishing Government on the system of representation only.

Those who have said that a Republic is not a *form* of Government calculated for countries of great extent, mistook, in the first place, the *business* of a Government, for a *form* of Government; for the *res-publica* equally appertains to every extent of territory and population. And, in the second place, if they meant anything with respect to *form*, it was the simple democratical form, such as was the mode of Government in the ancient democracies, in which there was no representation. The case, therefore, is not that a Republic cannot be extensive, but that it cannot be extensive on the simple democratical form; and the question naturally presents itself, *what is the best form of Government for conducting the RES-PUBLICA, or the PUBLIC BUSINESS of a nation, after it becomes too extensive and populous for the simple democratical form?*

It cannot be Monarchy, because Monarchy is subject to an objection of the same amount to which the simple democratical form was subject.

It is possible that an individual may lay down a system of principles, on which Government shall be constitutionally established to any extent of territory. This is no more than an operation of the mind, acting by its own powers. But the practice upon those principles, as applying to the various and numerous circumstances of a Nation, its agriculture, manufacture, trade, commerce, etc., etc., requires a knowledge of a different kind, and which can be had only from the various parts of society. It is an assemblage of practical knowledge, which no one individual can possess; and therefore the monarchical form is as much limited, in useful practice, from the incompetency of knowledge, as was the democratical form from the multiplicity of population. The one degenerates, by extension, into confusion; the other into ignorance and incapacity, of which all the great monarchies are an evidence. The monarchical form, therefore, could not be a substitute for the democratical, because it has equal inconveniences.

Much less could it when made hereditary. This is the most effectual of all forms to preclude knowledge. Neither could the high democratical mind have voluntarily yielded itself to be governed by children and idiots, and all the motley insignificance of character which attends such a mere animal system, the disgrace and the reproach of reason and of man.

As to the aristocratical form, it has the same vices and defects with the monarchical, except that the chance of abilities is better from the proportion of numbers, but there is still no security for the right use and application of them.

Referring then to the original simple Democracy, it affords the true data from which Government on a large scale can begin. It is incapable of extension, not from its principle, but from the inconvenience of its form; and Monarchy and Aristocracy, from their incapacity. Retaining, then, Democracy as the ground, and rejecting the corrupt systems of Monarchy and Aristocracy, the representative system naturally presents itself; remedying at once the defects of the simple Democracy as to form, and the incapacity of the other two with respect to knowledge.

Simple Democracy was society governing itself without the aid of secondary means. By ingrafting representation upon Democracy, we arrive at a system of Government capable of embracing and confederating all the various interests and every extent of territory and population; and that also with advantages as much superior to hereditary Government, as the Republic of Letters is to hereditary literature.

It is on this system that the American Government is founded. It is representation ingrafted upon Democracy. It has fixed the form by a scale parallel in all cases to the extent of the principle. What Athens was in miniature, America will be in magnitude. The one was the wonder of the ancient world; the other is becoming the admiration, the model of the present. It is the easiest of all the forms of Government to be understood and the most eligible in practice, and excludes at once the ignorance and insecurity of the hereditary mode, and the inconvenience of the simple Democracy.

It is impossible to conceive a system of Government capable of acting over such an extent of territory, and such a circle of interests, as is immediately produced by the operation of representation. France, great and populous as it is, is but a spot in the capaciousness of the system. It is preferable to simple Democracy even in small territories. Athens, by representation, would have outrivalled her own Democracy.

That which is called Government, or rather that which we ought to conceive Government to be, is no more than some common centre, in which all the parts of society unite. This cannot be accomplished by any method so conducive to the various interests of the community as by the representative system. It concentrates the knowledge necessary to the interest of the parts, and of the whole. It places Government in a state of constant maturity. It is, as has already been observed, never young, never old. It is subject neither to nonage nor dotage. It is never in the cradle nor on crutches. It admits not of a separation between knowledge and power, and is superior, as Government always ought to be, to all the accidents of individual man, and is therefore superior to what is called Monarchy.

A Nation is not a body, the figure of which is to be represented by the human body, but is like a body contained within a circle, having a common centre in which every radius meets; and that centre is formed by representation. To connect representation with what is called Monarchy is eccentric Government. Representation is of itself the delegated Monarchy of a Nation, and cannot debase itself by dividing it with another.

Mr. Burke has two or three times, in his parliamentary speeches, and in his publication, made use of a jingle of words that convey no ideas. Speaking of Government, he says: "It is better to have Monarchy for its basis, and Republicanism for its corrective, than Republicanism for its basis, and Monarchy for its corrective." If he means that it is better to correct folly with wisdom than wisdom with folly, I will not otherwise

contend with him, than that it would be much better to reject the folly entirely.

But what is this thing which Mr. Burke calls Monarchy? Will he explain it? All men can understand what representation is; and that it must necessarily include a variety of knowledge and talents. But what security is there for the same qualities on the part of Monarchy? or, when this Monarchy is a child, where then is the wisdom? What does it know about Government? Who then is the Monarch, or where is the Monarchy? If it is to be performed by Regency, it proves to be a farce. A Regency is a mock species of Republic, and the whole of Monarchy deserves no better description. It is a thing as various as imagination can paint. It has none of the stable character that Government ought to possess. Every succession is a Revolution, and every regency a counter-revolution. The whole of it is a scene of perpetual court cabal and intrigue, of which Mr. Burke is himself an instance. To render Monarchy consistent with Government, the next in succession should not be born a child, but a man at once, and that man a Solomon. It is ridiculous that Nations are to wait and Government be interrupted till boys grow to be men.

Whether I have too little sense to see, or too much to be imposed upon; whether I have too much or too little pride, or of anything else, I leave out of the question; but certain it is, that what is called Monarchy always appears to me a silly contemptible thing. I compare it to something kept behind a curtain, about which there is a great deal of bustle and fuss, and a wonderful air of seeming solemnity; but when, by an accident, the curtain happens to be opened, and the company see what it is, they burst into laughter.

In the representative system of Government, nothing of this can happen. Like the Nation itself, it possesses a perpetual stamina, as well of body as of mind, and presents itself on the open theatre of the world in a fair and manly manner. Whatever are its excellencies or defects, they are visible to all. It exists not by fraud and mystery; it deals not in cant and sophistry; but inspires a language that, passing from heart to heart, is felt and understood.

We must shut our eyes against reason, we must basely degrade our understanding, not to see the folly of what is called Monarchy. Nature is orderly in all her works; but this is a mode of Government that counteracts nature. It turns the progress of the human faculties upside down. It subjects age to be governed by children, and wisdom by folly.

On the contrary, the representative system is always parallel with the order and immutable laws of nature, and meets the reason of man in every part. For example:—

In the American federal Government, more power is delegated to the President of the United States than to any other individual member of Congress. He cannot, therefore, be elected to this office under the age of thirty-five years. By this time the judgment of man becomes matured, and he has lived long enough to be acquainted with man and things, and the country with him. But on the monarchical plan (exclusive of the numerous chances there are against every man born into the world, of drawing a prize in the lottery of human faculties), the next in succession, whatever he may be, is put at the head of a Nation, and of a Government, at the age of eighteen years. Does this appear like an act of wisdom? Is it consistent with the proper dignity and manly character of a Nation? Where is the propriety of calling such a lad the father of the people? In all other cases, a person is a minor until the age of twenty-one years. Before this period, he is not entrusted with the management of an acre of land, or with the heritable property of a flock of sheep or an herd of swine; but wonderful to tell! he may at the age of eighteen years be trusted with a Nation.

That Monarchy is all a bubble, a mere court artifice to procure money, is evident (at least to me) in every character in which it can be viewed. It would be impossible, on the rational system of representative Government, to make out a bill of expences to such an enormous amount as this deception admits. Government is not of itself a very chargeable institution. The whole expence of the federal Government of America, founded, as I have already said, on the system of representation, and extending over a country nearly ten times as large as England, is but six hundred thousand dollars, or one hundred and thirty-five thousand pounds sterling.

I presume that no man in his sober sense will compare the character of the Kings of Europe with that of General Washington. Yet in France, and also in England, the expence of the civil list only, for the support of one man, is eight times greater than the whole expence of the federal Government in America. To assign a reason for this appears almost impossible. The generality of the people of America, especially the poor, are more able to pay taxes than the generality of people either in France or England.

But the case is, that the representative system diffuses such a body of knowledge throughout a Nation, on the subject of Government, as to explode ignorance and preclude imposition. The craft of courts cannot

be acted on that ground. There is no place for mystery; nowhere for it to begin. Those who are not in the representation know as much of the nature of business as those who are. An affectation of mysterious importance would there be scouted. Nations can have no secrets; and the secrets of courts, like those of individuals, are always their defects.

In the representative system, the reason for everything must publicly appear. Every man is a proprietor in Government, and considers it a necessary part of his business to understand. It concerns his interest, because it affects his property. He examines the cost, and compares it with the advantages; and above all, he does not adopt the slavish custom of following what in other Governments are called LEADERS.

It can only be by blinding the understanding of man, and making him believe that Government is some wonderful mysterious thing, that excessive revenues are obtained. Monarchy is well calculated to ensure this end. It is the popery of Government, a thing kept up to amuse the ignorant and quiet them into taxes.

The Government of a free country, properly speaking, is not in the persons, but in the laws. The enacting of those requires no great expence; and when they are administered the whole of civil Government is performed—the rest is all court contrivance.

OF CONSTITUTIONS

THAT men mean distinct and separate things when they speak of Constitutions and of Governments, is evident; or why are those terms distinctly and separately used? A Constitution is not the act of a Government, but of a people constituting a Government; and Government without a Constitution is power without a right.

All power exercised over a Nation must have some beginning. It must either be delegated or assumed. There are no other sources. All delegated power is trust, and all assumed power is usurpation. Time does not alter the nature and quality of either.

In viewing this subject, the case and circumstances of America present themselves as in the beginning of a world; and our enquiry into the origin of Government is shortened by referring to the facts that have arisen in our own day. We have no occasion to roam for information into the obscure field of antiquity, nor hazard ourselves upon conjecture. We are brought at once to the point of seeing Government begin, as if we had lived in the beginning of time. The real volume, not of history, but of fact, is directly before us, unmutilated by contrivance or the errors of tradition.

I will here concisely state the commencement of the American Constitutions: by which the difference between Constitutions and Governments will sufficiently appear.

It may not be improper to remind the reader that the United States of America consist of thirteen separate states, each of which established a Government for itself, after the Declaration of Independence, done the 4th of July, 1776. Each state acted independently of the rest, in forming its Government; but the same general principle pervades the whole. When the several state Governments were formed, they proceeded to form the federal Government that acts over the whole in all matters which concern the interest of the whole, or which relate to the intercourse of the several states with each other, or with foreign Nations. I will begin with giving an instance from one of the state Governments (that of Pennsylvania), and then proceed to the federal Government.

The state of Pennsylvania, though nearly of the same extent of territory as England, was then divided into only twelve counties. Each of these counties had elected a committee at the commencement of the dispute with the English Government; and as the city of Philadelphia, which also had its committee, was the most central for intelligence, it became the centre of communication to the several county committees. When it became necessary to proceed to the formation of a Government, the committee of Philadelphia proposed a conference of all the committees, to be held in that city, and which met the latter end of July, 1776.

Though these committees had been elected by the people, they were not elected expressly for the purpose, nor invested with the authority, of forming a Constitution; and as they could not, consistently with the American ideas of right, assume such a power, they could only confer upon the matter, and put it into a train of operation. The conferees, therefore, did no more than state the case, and recommend to the several counties to elect six representatives for each county, to meet in convention at Philadelphia, with powers to form a Constitution, and propose it for public consideration.

This convention, of which Benjamin Franklin was President, having met and deliberated, and agreed upon a Constitution, they next ordered it to be published, not as a thing established, but for the consideration of the whole people, their approbation or rejection, and then adjourned to a stated time. When the time of adjournment was expired, the convention re-assembled, and as the general opinion of the people in approbation of it was then known, the Constitution was signed, sealed, and proclaimed, on the *authority of the people*, and the original instrument deposited as

a public record. The convention then appointed a day for the general election of the representatives who were to compose the Government, and the time it should commence; and having done this they dissolved, and returned to their several homes and occupations.

In this Constitution were laid down, first, a declaration of rights; then followed the form which the Government should have, and the powers which it should possess—the authority of the courts of judicature and of juries—the manner in which elections should be conducted, and the proportion of representatives to the number of electors—the time which each succeeding assembly should continue, which was one year—the mode of levying, and the accounting for the expenditure, of public money—of appointing public officers, etc., etc.

No article of this Constitution could be altered or infringed at the discretion of the Government that was to ensue. It was to the Government a law. But as it would have been unwise to preclude the benefit of experience, and in order also to prevent the accumulation of errors, if any should be found, and to preserve a unison of Government with the circumstances of the state to all times, the Constitution provided that at the expiration of every seven years, a convention should be elected for the express purpose of revising the Constitution and making alterations, additions, or abolitions therein, if any such should be found necessary.

Here we see a regular process—a Government issuing out of a Constitution, formed by the people in their original character; and that Constitution serving not only as an authority, but as a law of controul to the Government. It was the political Bible of the state. Scarcely a family was without it. Every member of the Government had a copy; and nothing was more common when any debate arose on the principle of a bill, or on the extent of any species of authority, than for the members to take the printed Constitution out of their pocket and read the chapter with which such matter in debate was connected.

Having thus given an instance from one of the states, I will show the proceedings by which the federal Constitution of the United States arose and was formed.

Congress, at its first two meetings, in September, 1774, and May, 1775, was nothing more than a deputation from the legislatures of the several provinces, afterwards states; and had no other authority than what arose from common consent, and the necessity of its acting as a public body. In everything which related to the internal affairs of America, Congress went no further than to issue recommendations to the several provincial assemblies, who at discretion adopted them or not. Nothing on the part

of Congress was compulsive; yet in this situation, it was more faithfully and affectionately obeyed than was any Government in Europe. This instance, like that of the National Assembly of France, sufficiently shews, that the strength of Government does not consist of anything *within* itself, but in the attachment of a Nation, and the interest which the people feel in supporting it. When this is lost Government is but a child in power, and though like the old Government of France it may harass individuals for a while, it but facilitates its own fall.

After the Declaration of Independence it became consistent with the principle on which representative Government is founded, that the authority of Congress should be defined and established. Whether that authority should be more or less than Congress then discretionarily exercised, was not the question. It was merely the rectitude of the measure.

For this purpose, the act called the Act of Confederation (which was a sort of imperfect federal Constitution) was proposed, and after long deliberation was concluded in the year 1781. It was not the Act of Congress, because it is repugnant to the principles of representative Government that a body should give power to itself. Congress first informed the several states of the powers which it conceived were necessary to be invested in the union, to enable it to perform the duties and services required from it; and the states severally agreed with each other, and concentrated in Congress those powers.

It may not be improper to observe that in both those instances (the one of Pennsylvania, and the other of the United States) there is no such thing as an idea of a compact between the people on one side and the Government on the other. The compact was that of the people with each other to produce and constitute a Government. To suppose that any Government can be a party in a compact with the whole people is to suppose it to have existence before it can have a right to exist. The only instance in which a compact can take place between the people and those who exercise the Government is, that the people shall pay them while they choose to employ them.

Government is not a trade which any man, or any body of men, has a right to set up and exercise for his own emolument, but is altogether a trust in right of those by whom the trust is delegated, and by whom it is always resumable. It has of itself no rights; they are altogether duties.

Having thus given two instances of the original formation of a Constitution, I will shew the manner in which both have been changed since their first establishment.

The powers vested in the Governments of the several states, by the

state Constitutions, were found upon experience to be too great, and those vested in the federal Government by the Act of Confederation, too little. The defect was not in the principle but in the distribution of power.

Numerous publications, in pamphlets and in newspapers, appeared on the propriety and necessity of new modelling the federal Government. After some time of public discussion, carried on through the channel of the press, and in conversations, the state of Virginia, experiencing some inconvenience with respect to commerce, proposed holding a continental conference; in consequence of which, a deputation from five or six of the state assemblies met at Annapolis, in Maryland, 1786. This meeting, not conceiving itself sufficiently authorised to go into the business of a reform, did no more than state their general opinions of the propriety of the measure, and recommend that a convention of all the states should be held the year following.

The convention met at Philadelphia in May, 1787, of which General Washington was elected President. He was not at that time connected with any of the state Governments, or with Congress. He delivered up his commission when the war ended, and since then had lived a private citizen.

The convention went deeply into all the subjects; and having, after a variety of debate and investigation, agreed among themselves upon the several parts of a federal Constitution, the next question was, the manner of giving it authority and practice.

For this purpose they did not, like a cabal of courtiers, send for a Dutch Stadtholder, or a German Elector; but they referred the whole matter to the sense and interests of the country.

They first directed that the proposed Constitution should be published. Secondly, that each state should elect a convention expressly for the purpose of taking it into consideration, and of ratifying or rejecting it; and that as soon as the approbation and ratification of any nine states should be given, that those states should proceed to the election of their proportion of members to the new federal Government; and that the operation of it should then begin, and the federal Government cease.

The several states proceeded accordingly to elect their conventions. Some of those conventions ratified the Constitution by very large majorities, and two or three unanimously. In others there were much debate and division of opinion. In the Massachusetts convention, which met at Boston, the majority was not above nineteen or twenty in about three hundred members; but such is the nature of representative Government, that it quietly decides all matters by majority. After the debate in the

Massachusetts convention was closed, and the vote taken, the objecting members rose and declared: "*That though they had argued and voted against it because certain parts appeared to them in a different light to what they appeared to other members; yet, as the vote had decided in favour of the Constitution as proposed, they should give it the same practical support as if they had voted for it.*"

As soon as nine states had concurred (and the rest followed in the order their conventions were elected), the old fabric of the federal Government was taken down, and the new erected, of which General Washington is President. In this place I cannot help remarking that the character and services of this gentleman are sufficient to put all those men called Kings to shame. While they are receiving from the sweat and labours of mankind a prodigality of pay, to which neither their abilities nor their services can entitle them, he is rendering every service in his power, and refusing every pecuniary reward. He accepted no pay as commander-in-chief; he accepts none as President of the United States.

After the new federal Constitution was established, the state of Pennsylvania, conceiving that some parts of its own Constitution required to be altered, elected a convention for that purpose. The proposed alterations were published, and the people concurring therein, they were established.

In forming those Constitutions, or in altering them, little or no inconvenience took place. The ordinary course of things was not interrupted, and the advantages have been much. It is always the interest of a far greater number of people in a Nation to have things right than to let them remain wrong; and when public matters are open to debate, and the public judgment free, it will not decide wrong, unless it decides too hastily.

In the two instances of changing the Constitutions, the Governments then in being were not actors either way. Government has no right to make itself a party in any debate respecting the principles or modes of forming, or of changing, Constitutions. It is not for the benefit of those who exercise the powers of Government that Constitutions, and the Governments issuing from them, are established. In all those matters the right of judging and acting are in those who pay, and not in those who receive.

A Constitution is the property of a Nation, and not of those who exercise the Government. All the Constitutions of America are declared to be established on the authority of the people. In France, the word Nation

is used instead of the people; but in both cases a Constitution is a thing antecedent to the Government, and always distinct therefrom.

In England it is not difficult to perceive that everything has a Constitution, except the Nation. Every society and association that is established first agreed upon a number of original articles, digested into form, which are its Constitution. It then appointed its officers, whose powers and authorities are described in that Constitution, and the Government of that society then commenced. Those officers, by whatever name they are called, have no authority to add to, alter, or abridge the original articles. It is only to the constituting power that this right belongs.

From the want of understanding the difference between a Constitution and a Government, Dr. Johnson and all writers of his description have always bewildered themselves. They could not but perceive that there must necessarily be a *controuling* power existing somewhere, and they placed this in the discretion of the persons exercising the Government, instead of placing it in a Constitution formed by the Nation. When it is in a Constitution it has the Nation for its support, and the natural and the political controuling powers are together. The laws which are enacted by Governments controul men only as individuals, but the Nation, through its Constitution, controuls the whole Government, and has a natural ability so to do. The final controuling power, therefore, and the original constituting power, are one and the same power.

Dr. Johnson could not have advanced such a position in any country where there was a Constitution; and he is himself an evidence that no such thing as a Constitution exists in England. But it may be put as a question, not improper to be investigated, That if a Constitution does not exist how came the idea of its existence so generally established.

In order to decide this question, it is necessary to consider a Constitution in both its cases:—First, as creating a Government and giving it powers. Secondly, as regulating and restraining the powers so given.

If we begin with William of Normandy, we find that the Government of England was originally a tyranny, founded on an invasion and conquest of the country. This being admitted, it will then appear that the exertion of the Nation at different periods to abate that tyranny and render it less intolerable, has been credited for a Constitution.

Magna Charta, as it was called (it is now like an almanack of the same date), was no more than compelling the Government to renounce a part of its assumptions. It did not create and give powers to Government in the manner a Constitution does; but was, as far as it went, of

the nature of a re-conquest, and not a Constitution; for could the Nation have totally expelled the usurpation as France has done its despotism, it would then have had a Constitution to form.

The history of the Edwards and the Henries, and up to the commencement of the Stuarts, exhibits as many instances of tyranny as could be acted within the limits to which the Nation had restricted it. The Stuarts endeavoured to pass those limits, and their fate is well known. In all those instances we see nothing of a Constitution, but only of restrictions on assumed power.

After this, another William, descended from the same stock, and claiming from the same origin, gained possession; and of the two evils, *James* and *William*, the nation preferred what it thought the least; since, from circumstances, it must take one. The act, called the Bill of Rights, comes here into view. What is it but a bargain which the parts of the Government made with each other, to divide powers, profits, and privileges? You shall have so much, and I will have the rest; and with respect to the Nation, it said, for *your share you shall have the right of petitioning*. This being the case, the Bill of Rights is more properly the bill of wrongs and of insult. As to what is called the convention Parliament, it was a thing that made itself, and then made the authority by which it acted. A few persons got together, and called themselves by that name. Several of them had never been elected, and none of them for the purpose.

From the time of William a species of Government arose, issuing out of this coalition Bill of Rights; and more so since the corruption introduced at the Hanover succession, by the agency of Walpole, that can be described by no other name than a despotic legislation. Though the parts may embarrass each other, the whole has no bounds; and the only right it acknowledges out of itself is the right of petitioning. Where then is the Constitution that either gives or restrains power?

It is not because a part of the Government is elective, that makes it less a despotism, if the persons so elected possess afterwards, as a Parliament, unlimited powers. Election in this case becomes separated from representation, and the candidates are candidates for despotism.

I cannot believe that any Nation, reasoning on its own right, would have thought of calling those things a *Constitution*, if the cry of Constitution had not been set up by the Government. It has got into circulation like the words *bore* and *quiz*, by being chalked up in the speeches of Parliament, as those words were on window-shutters and door-posts; but whatever the Constitution may be in other respects, it has undoubtedly been *the most productive machine of taxation that was ever invented*.

The taxes in France, under the new Constitution, are not quite thirteen shillings per head, and the taxes in England, under what is called its present Constitution, are forty-eight shillings and sixpence per head—men, women, and children—amounting to nearly seventeen millions sterling, besides the expence of collecting, which is upwards of a million more.

In a country like England, where the whole of the civil Government is executed by the people of every town and county by means of parish officers, magistrates, quarterly sessions, juries, and assize, without any trouble to what is called the Government or any other expence to the revenue than the salary of the judges, it is astonishing how such a mass of taxes can be employed. Not even the internal defence of the country is paid out of the revenue. On all occasions, whether real or contrived, recourse is continually had to new loans and new taxes. No wonder, then, that a machine of Government so advantageous to the advocates of a Court should be so triumphantly extolled. No wonder, that St. James' or St. Stephen's should echo with the continual cry of Constitution! No wonder, that the French Revolution should be reprobated, and the *res-publica* treated with reproach! The *red book* of England, like the red book of France, will explain the reason.

I will now, by way of relaxation, turn a thought or two to Mr. Burke. I ask his pardon for neglecting him so long.

"America," says he (in his speech on the Canada Constitution Bill), "never dreamed of such absurd doctrine as the *Rights of Man*."

Mr. Burke is such a bold presumer, and advances his assertions and his premises with such a deficiency of judgment, that without troubling ourselves about the principles of philosophy or politics, the mere logical conclusions they produce are ridiculous. For instance:

If Governments, as Mr. Burke asserts, are not founded on the Rights of MAN, and are founded on *any rights* at all, they consequently must be founded on the right of *something* that is *not man*. What then is that something?

Generally speaking, we know of no other creatures that inhabit the earth than man and beast; and in all cases where only two things offer themselves, and one must be admitted, a negation proved on any one amounts to an affirmative on the other; and therefore, Mr. Burke, by proving against the Rights of *Man* proves in behalf of the *beast*; and consequently, proves that Government is a beast; and as difficult things sometimes explain each other, we now see the origin of keeping wild beasts in the Tower; for they certainly can be of no other use than to

shew the origin of the Government. They are in the place of a Constitution. O, John Bull, what honours thou hast lost by not being a wild beast. Thou mightest, on Mr. Burke's system, have been in the Tower for life.

If Mr. Burke's arguments have not weight enough to keep one serious, the fault is less mine than his; and as I am willing to make an apology to the reader for the liberty I have taken, I hope Mr. Burke will also make his for giving the cause.

Having thus paid Mr. Burke the compliment of remembering him, I return to the subject.

From the want of a Constitution in England to restrain and regulate the wild impulse of power, many of the laws are irrational and tyrannical, and the administration of them vague and problematical.

The attention of the Government of England (for I rather chuse to call it by this name than the English Government) appears since its political connection with Germany to have been so completely engrossed and absorbed by foreign affairs, and the means of raising taxes, that it seems to exist for no other purposes. Domestic concerns are neglected; and with respect to regular law there is scarcely such a thing.

Almost every case now must be determined by some precedent, be that precedent good or bad, or whether it properly applies or not; and the practice is become so general as to suggest a suspicion that it proceeds from a deeper policy than at first sight appears.

Since the Revolution of America, and more so since that of France, this preaching up the doctrines of precedents, drawn from times and circumstances antecedent to those events, has been the studied practice of the English Government. The generality of those precedents are founded on principles and opinions, the reverse of what they ought; and the greater distance of time they are drawn from the more they are to be suspected. But by associating those precedents with a superstitious reverence for ancient things, as monks shew relics and call them holy, the generality of mankind are deceived into the design. Governments now act as if they were afraid to awaken a single reflection in man. They are softly leading him to the sepulchre of precedents to deaden his faculties and call attention from the scene of Revolutions. They feel that he is arriving at knowledge faster than they wish, and their policy of precedents is the barometer of their fears. This political popery, like the ecclesiastical popery of old, has had its day, and is hastening to its exit. The ragged relic and the antiquated precedent, the monk and the monarch, will moulder together.

Government by precedent, without any regard to the principle of the

precedent, is one of the vilest systems that can be set up. In numerous instances the precedent ought to operate as a warning, and not as an example, and requires to be shunned instead of imitated; but instead of this, precedents are taken in the lump, and put at once for Constitution and for law.

Either the doctrine of precedents is policy to keep man in a state of ignorance, or it is a practical confession that wisdom degenerates in Governments as Governments increase in age, and can only hobble along by the stilts and crutches of precedents. How is it that the same persons who would proudly be thought wiser than their predecessors appear at the same time only as the ghosts of departed wisdom? How strangely is antiquity treated! To answer some purposes it is spoken of as the times of darkness and ignorance, and to answer others, it is put for the light of the world.

If the doctrine of precedents is to be followed, the expences of Government need not continue the same. Why pay men extravagantly who have but little to do? If everything that can happen is already in precedent, legislation is at an end, and precedent, like a dictionary, determines every case. Either, therefore, Government has arrived at its dotage, and requires to be renovated, or all the occasions for exercising its wisdom have already occurred.

We now see all over Europe, and particularly in England, the curious phenomenon of a nation looking one way, and the Government the other—the one forward and the other backward. If Governments are to go on by precedent, while Nations go on by improvement, they must at last come to a final separation; and the sooner, and the more civilly they determine this point, the better.

Having thus spoken of Constitutions generally, as things distinct from actual Governments, let us proceed to consider the parts of which a Constitution is composed.

Opinions differ more on this subject than with respect to the whole. That a Nation ought to have a Constitution, as a rule, for the conduct of its Government is a simple question in which all men not directly courtiers, will agree. It is only on the component parts that questions and opinions multiply.

But this difficulty, like every other, will diminish when put into a train of being rightly understood.

The first thing is, that a Nation has a right to establish a Constitution. Whether it exercises this right in the most judicious manner at first is

quite another case. It exercises it agreeably to the judgment it possesses; and by continuing to do so, all errors will at last be exploded.

When this right is established in a Nation, there is no fear that it will be employed to its own injury. A Nation can have no interest in being wrong.

Though all the Constitutions of America are on one general principle, yet no two of them are exactly alike in their component parts or in the distribution of the powers which they give to the actual Governments. Some are more, and others less complex.

In forming a Constitution, it is first necessary to consider what are the ends for which Government is necessary? Secondly, what are the best means, and the least expensive, for accomplishing those ends?

Government is nothing more than a national association; and the object of this association is the good of all, as well individually as collectively. Every man wishes to pursue his occupation, and to enjoy the fruits of his labours and the produce of his property in peace and safety, and with the least possible expence. When these things are accomplished, all the objects for which Government ought to be established are answered.

It has been customary to consider Government under three distinct general heads. The legislative, the executive, and the judicial.

But if we permit our judgment to act unencumbered by the habit of multiplied terms, we can perceive no more than two divisions of power, of which civil Government is composed, namely that of legislating or enacting laws, and that of executing or administering them. Everything, therefore, appertaining to civil Government, classes itself under one or other of these two divisions.

So far as regards the execution of the laws, that which is called the judicial power, is strictly and properly the executive power of every country. It is that power to which every individual has to appeal, and which causes the law to be executed; neither have we any other clear idea with respect to the official execution of the laws. In England, and also in America and France, this power begins with the magistrate, and proceeds up through all the courts of judicature.

I leave to courtiers to explain what is meant by calling Monarchy the executive power. It is merly a name in which acts of Government are done; and any other, or none at all, would answer the same purpose. Laws have neither more nor less authority on this account. It must be from the justness of their principles, and the interest which a Nation feels therein, that they derive support; if they require any other than

this, it is a sign that something in the system of Government is imperfect. Laws difficult to be executed cannot be generally good.

With respect to the organization of the *legislative power*, different modes have been adopted in different countries. In America it is generally composed of two houses. In France it consists but of one, but in both countries it is wholly by representation.

The case is, that mankind (from the long tyranny of assumed power) have had so few opportunities of making the necessary trials on modes and principles of Government, in order to discover the best, *that Government is but now beginning to be known*, and experience is yet wanting to determine many particulars.

The objections against two houses are, first, that there is an inconsistency in any part of a whole legislature, coming to a final determination by vote on any matter, whilst *that matter*, with respect to *that whole*, is yet only in a train of deliberation, and consequently open to new illustrations.

Secondly. That by taking the vote on each, as a separate body, it always admits of the possibility, and is often the case in practice, that the minority governs the majority, and that in some instances to a degree of great inconsistency.

Thirdly. That two houses arbitrarily checking or controuling each other is inconsistent; because it cannot be proved on the principles of just representation, that either should be wiser or better than the other. They may check in the wrong as well as in the right—and therefore to give the power where we cannot give the wisdom to use it, nor be assured of its being rightly used, renders the hazard at least equal to the precaution.

The objection against a single house is, that it is always in a condition of committing itself too soon. But it should at the same time be remembered, that when there is a Constitution which defines the power, and establishes the principles within which a legislature shall act, there is already a more effectual check provided, and more powerfully operating, than any other check can be. For example:

Were a Bill to be brought into any of the American legislatures similar to that which was passed into an act by the English Parliament, at the commencement of George the First, to extend the duration of the assemblies to a longer period than they now sit, the check is in the Constitution, which in effect says, *Thus far shalt thou go and no further*.

But in order to remove the objection against a single house, that of acting with too quick an impulse, and at the same time to avoid the in-

consistencies, in some cases absurdities, arising from two houses, the following method has been proposed as an improvement upon both.

First, to have but one representation.

Secondly, to divide that representation, by lot, into two or three parts.

Thirdly, that every proposed Bill shall be first debated in those parts by succession, that they may become the hearers of each other, but without taking any vote. After which the whole representation to assemble for a general debate and determination by vote.

To this proposed improvement has been added another, for the purpose of keeping the representation in the state of constant renovation; which is that one-third of the representation of each country shall go out at the expiration of one year, and the number be replaced by new elections. Another third at the expiration of the second year replaced in like manner, and every third year to be a general election.

But in whatever manner the separate parts of a Constitution may be arranged there is *one* general principle that distinguishes freedom from slavery, which is, *that all hereditary Government over a people is to them a species of slavery, and representative Government is freedom.*

Considering Government in the only light in which it should be considered, that of a NATIONAL ASSOCIATION, it ought to be so constructed as not to be disordered by any accident happening among the parts; and, therefore, no extraordinary power, capable of producing such an effect, should be lodged in the hands of any individual. The death, sickness, absence or defection, of any one individual in a Government, ought to be a matter of no more consequence, with respect to the Nation, than if the same circumstance had taken place in a member of the English Parliament, or the French National Assembly.

Scarcely anything presents a more degrading character of national greatness, than its being thrown into confusion, by anything happening to or acted by any individual; and the ridiculousness of the scene is often increased by the natural insignificance of the person by whom it is occasioned. Were a Government so constructed, that it could not go on unless a goose or a gander were present in the senate, the difficulties would be just as great and as real, on the flight or sickness of the goose, or the gander, as if it were called a King. We laugh at individuals for the silly difficulties they make to themselves, without perceiving that the greatest of all ridiculous things are acted in Governments.

All the Constitutions of America are on a plan that excludes the childish embarrassments which occur in monarchical countries. No suspension

of Government can there take place for a moment, from any circumstances whatever. The system of representation provides for everything, and is the only system in which Nations and Governments can always appear in their proper character.

As extraordinary power ought not to be lodged in the hands of any individual, so ought there to be no appropriations of public money to any person, beyond what his services in a state may be worth. It signifies not whether a man be called a president, a king, an emperor, a senator, or by any other name which propriety or folly may devise or arrogance assume, it is only a certain service he can perform in the state; and the service of any such individual in the routine of office, whether such office be called monarchical, presidential, senatorial, or by any other name or title, can never exceed the value of ten thousand pounds a year. All the great services that are done in the world are performed by volunteer characters, who accept nothing for them; but the routine of office is always regulated to such a general standard of abilities as to be within the compass of numbers in every country to perform, and therefore cannot merit very extraordinary recompence. *Government, says Swift, is a plain thing, and fitted to the capacity of many heads.*

It is inhuman to talk of a million sterling a year, paid out of the public taxes of any country, for the support of an individual, whilst thousands who are forced to contribute thereto, are pining with want, and struggling with misery. Government does not consist in a contrast between prisons and palaces, between poverty and pomp; it is not instituted to rob the needy of his mite, and increase the wretchedness of the wretched. But of this part of the subject I shall speak hereafter, and confine myself at present to political observations.

When extraordinary power and extraordinary pay are allotted to any individual in a Government, he becomes the centre, round which every kind of corruption generates and forms. Give to any man a million a-year, and add thereto the power of creating and disposing of places, at the expence of a country, and the liberties of that country are no longer secure. What is called the splendour of a throne is no other than the corruption of the state. It is made up of a band of parasites living in luxurious indolence out of the public taxes.

When once such a vicious system is established it becomes the guard and protection of all inferior abuses. The man who is in the receipt of a million a year is the last person to promote a spirit of reform, lest, in the event, it should reach to himself. It is always his interest to defend inferior abuses, as so many outworks to protect the citadel; and on this

species of political fortification, all the parts have such a common dependence that it is never to be expected they will attack each other.

Monarchy would not have continued so many ages in the world had it not been for the abuses it protects. It is the master-fraud, which shelters all others. By admitting a participation of the spoil, it makes itself friends; and when it ceases to do this it will cease to be the idol of courtiers.

As the principle on which Constitutions are now formed rejects all hereditary pretensions to Government, it also rejects all that catalogue of assumptions known by the name of prerogatives.

If there is any Government where prerogatives might with apparent safety be entrusted to any individual, it is in the federal Government of America. The President of the United States of America is elected only for four years. He is not only responsible in the general sense of the word, but a particular mode is laid down in the Constitution for trying him. He cannot be elected under thirty-five years of age; and he must be a native of the country.

In a comparison of these cases with the Government of England, the difference when applied to the latter amounts to an absurdity. In England the person who exercises prerogative is often a foreigner; always half a foreigner, and always married to a foreigner. He is never in full natural or political connection with the country, is not responsible for anything, and becomes of age at eighteen years; yet such a person is permitted to form foreign alliances, without even the knowledge of the Nation, and to make war and peace without its consent.

But this is not all. Though such a person cannot dispose of the Government in the manner of a testator, he dictates the marriage connections, which, in effect, accomplish a great part of the same end. He cannot directly bequeath half the Government to Prussia, but he can form a marriage partnership that will produce almost the same thing. Under such circumstances, it is happy for England that she is not situated on the Continent, or she might, like Holland, fall under the dictatorship of Prussia. Holland, by marriage, is as effectually governed by Prussia, as if the whole tyranny of bequeathing the Government had been the means.

The presidency in America (or, as it is sometimes called, the executive) is the only office from which a foreigner is excluded, and in England it is the only one to which he is admitted. A foreigner cannot be a member of Parliament, but he may be what is called a King. If there is any reason for excluding foreigners, it ought to be from those offices where mischief can be most acted, and where, by uniting every bias of

interest and attachment, the trust is best secured. But as Nations proceed in the great business of forming Constitutions, they will examine with more precision into the nature and business of that department which is called executive. What the legislative and judicial departments are every one can see; but with respect to what, in Europe, is called the executive, as distinct from those two, it is either a political superfluity or a chaos of unknown things.

Some kind of official department, to which reports shall be made from the different parts of a Nation, or from abroad, to be laid before the national representatives, is all that is necessary; but there is no consistency in calling this the executive; neither can it be considered in any other light than as inferior to the legislative. The sovereign authority in any country is the power of making laws, and everything else is an official department.

Next to the arrangement of the principles and the organization of the several parts of a Constitution, is the provision to be made for the support of the persons to whom the Nation shall confide the administration of the Constitutional powers.

A nation can have no right to the time and services of any person at his own expence, whom it may choose to employ or entrust in any department whatever; neither can any reason be given for making provision for the support of any one part of a Government and not for the other.

But admitting that the honour of being entrusted with any part of a Government is to be considered a sufficient reward, it ought to be so to every person alike. If the members of the legislature of any country are to serve at their own expence, that which is called the executive, whether monarchical or by any other name, ought to serve in like manner. It is inconsistent to pay the one, and accept the service of the other gratis.

In America, every department in the Government is decently provided for; but no one is extravagantly paid. Every member of Congress, and of the assemblies, is allowed a sufficiency for his expences. Whereas in England, a most prodigal provision is made for the support of one part of the Government and none for the other, the consequence of which is that the one is furnished with the means of corruption and the other is put into the condition of being corrupted. Less than a fourth part of such expence, applied as it is in America, would remedy a great part of the corruption.

Another reform in the American Constitutions is the exploding of all oaths of personality. The oath of allegiance in America is to the nation

only. The putting any individual as a figure for a Nation is improper. The happiness of a Nation is the superior object, and therefore the intention of an oath of allegiance ought not to be obscured by being figuratively taken to, or in the name of, any person. The oath, called the civic oath, in France, viz., the "*Nation, the Law, and the King*," is improper. If taken at all, it ought to be as in America, to the nation only. The law may or may not be good; but in this place it can have no other meaning than as being conducive to the happiness of the nation, and therefore is included in it. The remainder of the oath is improper on the ground that all personal oaths ought to be abolished. They are the remains of tyranny on one part and slavery on the other; and the name of the CREATOR ought not to be introduced to witness the degradation of his creation; or if taken, as is already mentioned, as figurative of the Nation, it is in this place redundant. But whatever apology may be made for oaths at the first establishment of a Government, they ought not to be permitted afterwards. If a Government requires the support of oaths, it is a sign that it is not worth supporting, and ought not to be supported. Make Government what it ought to be, and it will support itself.

To conclude this part of the subject:—One of the greatest improvements that has been made for the perpetual security and progress of constitutional liberty, is the provision which the new Constitutions make for occasionally revising, altering, and amending them.

The principle upon which Mr. Burke formed his political creed, that of *binding and controlling posterity to the end of time, and of renouncing and abdicating the rights of all posterity for ever*, is now become too detestable to be made a subject of debate; and therefore I pass it over with no other notice than exposing it.

Government is but now beginning to be known. Hitherto it has been the mere exercise of power which forbade all effectual enquiry into rights, and grounded itself wholly on possession. While the enemy of liberty was its judge, the progress of its principles must have been small indeed.

The Constitutions of America, and also that of France, have either affixed a period for their revision, or laid down the mode by which improvement shall be made. It is perhaps impossible to establish anything that combines principles with opinions and practice, which the progress of circumstances, through a length of years, will not in some measure derange, or render inconsistent; and, therefore, to prevent inconveniences accumulating, till they discourage reformatations or provoke Revolutions, it is best to provide the means of regulating them as they occur. The Rights of Man are the rights of all generations of

men, and cannot be monopolized by any. That which is worth following will be followed for the sake of its worth, and it is in this that its security lies, and not in any conditions with which it may be encumbered. When a man leaves property to his heirs, he does not connect it with an obligation that they shall accept it. Why, then, should we do otherwise with respect to Constitutions?

The best Constitution that could now be devised, consistent with the condition of the present moment, may be far short of that excellence which a few years may afford. There is a morning of reason rising upon man on the subject of Government that has not appeared before. As the barbarism of the present old Governments expires, the moral condition of Nations with respect to each other will be changed. Man will not be brought up with the savage idea of considering his species as his enemy, because the accident of birth gave the individuals existence in countries distinguished by different names; and as Constitutions have always some relation to external as well as to domestic circumstances, the means of benefiting by every change, foreign or domestic, should be a part of every Constitution.

We already see an alteration in the national disposition of England and France towards each other, which, when we look back to only a few years, is itself a Revolution. Who could have foreseen, or who would have believed, that a French National Assembly would ever have been a popular toast in England, or that a friendly alliance of the two Nations should become the wish of either? It shews that man, were he not corrupted by Governments, is naturally the friend of man, and that human nature is not of itself vicious. That spirit of jealousy and ferocity, which the Governments of the two countries inspired, and which they rendered subservient to the purpose of taxation, is now yielding to the dictates of reason, interest, and humanity. The trade of courts is beginning to be understood, and the affectation of mystery, with all the artificial sorcery by which they imposed upon mankind, is on the decline. It has received its death wound; and though it may linger, it will expire.

Government ought to be as much open to improvement as anything which appertains to man, instead of which it has been monopolized from age to age, by the most ignorant and vicious of the human race. Need we any other proof of their wretched management, than the excess of debts and taxes with which every nation groans, and the quarrels into which they have precipitated the world?

Just emerging from such a barbarous condition, it is too soon to determine to what extent of improvement Government may yet be carried.

For what we can foresee, all Europe may form but one great Republic, and man be free of the whole.

WAYS AND MEANS OF IMPROVING THE CONDITION OF EUROPE,
INTERSPERSED WITH MISCELLANEOUS OBSERVATIONS

IN CONTEMPLATING a subject that embraces with equatorial magnitude the whole region of humanity it is impossible to confine the pursuit in one single direction. It takes ground on every character and condition that appertains to man, and blends the individual, the nation, and the world.

From a small spark, kindled in America, a flame has arisen not to be extinguished. Without consuming, like the *Ultima Ratio Regum*, it winds its progress from Nation to Nation and conquers by a silent operation. Man finds himself changed, he scarcely perceives how. He acquires a knowledge of his rights by attending justly to his interest, and discovers in the event that the strength and powers of despotism consist wholly in the fear of resisting it, and that in order "*to be free it is sufficient that he wills it.*"

Having in all the preceding parts of this work endeavoured to establish a system of principles as a basis on which Governments ought to be erected, I shall proceed in this to the ways and means of rendering them into practice. But in order to introduce this part of the subject with more propriety and stronger effect, some preliminary observations, deducible from, or connected with those principles, are necessary.

Whatever the form or Constitution of Government may be, it ought to have no other object than the *general* happiness. When instead of this it operates to create and increase wretchedness, in any of the parts of society, it is on a wrong system and reformation is necessary.

Customary language has classed the condition of man under the two descriptions of civilized and uncivilized life. To the one it has ascribed felicity and affluence: to the other hardship and want. But, however our imagination may be impressed by painting and comparison, it is nevertheless true, that a great portion of mankind, in what are called civilized countries, are in a state of poverty and wretchedness, far below the condition of an Indian. I speak not of one country, but of all. It is so in England, it is so all over Europe. Let us enquire into the cause.

It lies not in any natural defect in the principles of civilization, but in preventing those principles having an universal operation; the consequence of which is a perpetual system of war and expence, that drains the country and defeats the general felicity of which civilization is capable.

All the European Governments (France now excepted) are constructed not on the principle of universal civilization, but on the reverse of it. So far as those Governments relate to each other they are in the same condition as we conceive of savage uncivilized life, they put themselves beyond the law as well of God as of man, and are with respect to principle and reciprocal conduct like so many individuals in a state of nature.

The inhabitants of every country, under the civilization of laws, easily civilize together, but Governments being yet in an uncivilized state, and almost continually at war, they pervert the abundance which civilized life produces to carry on the uncivilized part to a greater extent. By thus engrafting the barbarism of Government upon the internal civilization of a country, it draws from the latter, and more especially from the poor, a great portion of those earnings which should be applied to their own subsistence and comfort. Apart from all reflections of morality and philosophy, it is a melancholy fact that more than one-fourth of the labour of mankind is annually consumed by this barbarous system.

What has served to continue this evil is the pecuniary advantage which all the Governments of Europe have found in keeping up this state of uncivilization. It affords to them pretences for power and revenue, for which there would be neither occasion nor apology if the circle of civilization were rendered complete. Civil Government alone, or the Government of laws, is not productive of pretences for many taxes; it operates at home, directly under the eye of the country, and precludes the possibility of much imposition. But when the scene is laid in the uncivilized contention of Governments, the field of pretences is enlarged, and the country being no longer a judge, is open to every imposition which Governments please to act.

Not a thirtieth, scarcely a fortieth, part of the taxes which are raised in England are either occasioned by, or applied to, the purposes of civil Government. It is not difficult to see that the whole which the actual Government does in this respect is to enact laws, and that the country administers and executes them, at its own expense, by means of magistrates, juries, sessions, and assize, over and above the taxes which it pays.

In this view of the case, we have two distinct characters of Government; the one the civil Government, or the Government of laws, which operates at home, the other the Court or Cabinet Government, which operates abroad, on the rude plan of uncivilized life; the one attended with little charge, the other with boundless extravagance; and so distinct are the two, that if the latter were to sink, as it were, by a sudden opening of the earth, and totally disappear, the former would not be de-

ranged. It would still proceed, because it is the common interest of the Nation that it should, and all the means are in practice.

Revolutions, then, have for their object a change in the moral condition of Governments, and with this change the burden of public taxes will lessen, and civilization will be left to the enjoyment of that abundance of which it is now deprived.

In contemplating the whole of this subject, I extend my views into the department of commerce. In all my publications, where the matter would admit, I have been an advocate for commerce, because I am a friend to its effects. It is a pacific system, operating to cordialise mankind, by rendering Nations, as well as individuals, useful to each other. As to the mere theoretical reformation, I have never preached it up. The most effectual process is that of improving the condition of man by means of his interest; and it is on this ground that I take my stand.

If commerce were permitted to act to the universal extent it is capable, it would extirpate the system of war, and produce a Revolution in the uncivilized state of Governments. The invention of commerce has arisen since those Governments began, and it is the greatest approach towards universal civilization that has yet been made by any means not immediately flowing from moral principles.

Whatever has a tendency to promote the civil intercourse of Nations by an exchange of benefits, is a subject as worthy of philosophy as of politics. Commerce is no other than the traffic of two individuals, multiplied on a scale of number; and the same rule that nature intended the intercourse of two, she intended for all. For this purpose she has distributed the materials of manufactures and commerce in various and distant parts of a Nation and of the world; and as they cannot be procured by war so cheaply or so commodiously as by commerce, she has rendered the latter the means of extirpating the former.

As the two are nearly the opposites of each other, consequently, the uncivilized state of the European Governments is injurious to commerce. Every kind of destruction or embarrassment serves to lessen the quantity, and it matters but little in what part of the commercial world the reduction begins. Like blood, it cannot be taken from any of the parts, without being taken from the whole mass in circulation, and all partake of the loss. When the ability in any Nation to buy is destroyed, it equally involves the seller. Could the Government of England destroy the commerce of all other Nations, she would most effectually ruin her own.

It is possible that a Nation may be the carrier for the world, but she cannot be the merchant. She cannot be the seller and buyer of her own

merchandize. The ability to buy must reside out of herself; and, therefore, the prosperity of any commercial Nation is regulated by the prosperity of the rest. If they are poor she cannot be rich, and her condition, be it what it may, is an index of the height of the commercial tide in other Nations.

That the principles of commerce, and its universal operation, may be understood, without understanding the practice, is a position that reason will not deny; and it is on this ground only that I argue the subject. It is one thing in the counting-house, in the world it is another. With respect to its operation it must necessarily be contemplated as a reciprocal thing; that only one-half of its power resides within the Nation, and that the whole is as effectually destroyed by destroying the half that resides without, as if the destruction had been committed on that which is within; for neither can act without the other.

When in the last, as well as in the former wars, the commerce of England sunk, it was because the general quantity was lessened everywhere; and it now rises, because commerce is in a rising state in every Nation. If England, at this day, imports and exports more than at any former period, the Nation with which she trades must necessarily do the same; her imports are their exports, and *vice versa*.

There can be no such thing as a Nation flourishing alone in commerce; she can only participate; and the destruction of it in any part must necessarily affect all. When, therefore, Governments are at war, the attack is made upon the common stock of commerce, and the consequence is the same as if each had attacked his own.

The present increase of commerce is not to be attributed to ministers, or to any political contrivances, but to its own natural operations in consequence of peace. The regular markets had been destroyed, the channels of trade broken up, the high road of the seas infested with robbers of every Nation, and the attention of the world called to other objects. Those interruptions have ceased, and peace has restored the deranged condition of things to their proper order.

It is worth remarking, that every Nation reckons the balance of trade in its own favour; and therefore something must be irregular in the common ideas upon this subject.

The fact, however, is true, according to what is called a balance; and it is from this cause that commerce is universally supported. Every Nation feels the advantage, or it would abandon the practice; but the deception lies in the mode of making up the accounts, and in attributing what are called profits to a wrong cause.

Mr. Pitt has sometimes amused himself, by showing what he called a balance of trade from the custom-house books. This mode of calculation, not only affords no rule that is true, but one that is false.

In the first place, Every cargo that departs from the custom-house, appears on the books as an export; and according to the custom-house balance, the losses at sea, and by foreign failures, are all reckoned on the side of profit because they appear as exports.

Secondly, Because the importation by the smuggling trade does not appear on the custom-house books, to arrange against the exports.

No balance, therefore, as applying to superior advantages, can be drawn from those documents: and if we examine the natural operation of commerce, the idea is fallacious, and if true, would soon be injurious. The great support of commerce consists in the balance being a level of benefits among all Nations.

Two merchants of different Nations trading together, will both become rich, and each makes the balance in his own favour; consequently they do not get rich out of each other; and it is the same with respect to the Nations in which they reside. The case must be, that each Nation must get rich out of its own means, and encrease that riches by something which it procures from another in exchange.

If a merchant in England sends an article of English manufacture abroad which costs him a shilling at home and imports something which sells for two, he makes a balance of one shilling in his own favour; but this is not gained out of the foreign Nation or the foreign merchant, for he also does the same by the articles he receives, and neither has a balance of advantage upon the other. The original value of the two articles in their proper countries was but two shillings, but by changing their places, they acquire a new idea of value equal to double what they had at first, and that encreased value is equally divided.

There is no otherwise a balance on foreign than on domestic commerce. The merchants of London and Newcastle trade on the same principles, as if they resided in different Nations, and make their balances in the same manner; yet London does not get rich out of Newcastle, any more than Newcastle out of London; but coals, the merchandize of Newcastle, have an additional value at London, and London merchandize has the same at Newcastle.

Though the principle of all commerce is the same, the domestic, in a national view, is the part the most beneficial; because the whole of the advantages, on both sides, rests within the Nation; whereas, in foreign commerce, it is only participation of one-half.

The most unprofitable of all commerce is that connected with foreign dominion. To a few individuals it may be beneficial, merely because it is commerce; but to the Nation it is a loss. The expence of maintaining dominion more than absorbs the profits of any trade. It does not encrease the general quantity in the world, but operates to lessen it, and as a greater mass would be afloat by relinquishing dominion, the participation without the expence would be more valuable than a greater quantity with it.

But it is impossible to engross commerce by dominion; and therefore it is still more fallacious. It cannot exist in confined channels, and necessarily breaks out by regular or irregular means, that defeat the attempt; and to succeed would be still worse. France, since the Revolution, has been more than indifferent as to foreign possessions, and other Nations will become the same when they investigate the subject with respect to commerce.

To the expence of dominion is to be added that of navies, and when the amount of the two are subtracted from the profits of commerce, it will appear that what is called the balance of trade, even admitting it to exist, is not enjoyed by the Nation, but absorbed by the Government.

The idea of having navies for the protection of commerce is delusive. It is putting the means of destruction for the means of protection. Commerce needs no other protection than the reciprocal interest which every nation feels in supporting it—it is common stock—it exists by a balance of advantages to all; and the only interruption it meets, is from the present uncivilized state of Governments, and which it is common interest to reform.

Quitting this subject, I now proceed to other matters. As it is necessary to include England in the prospect of a general reformation, it is proper to enquire into the defects of its Government. It is only by each Nation reforming its own, that the whole can be improved, and the full benefit of reformation enjoyed. Only partial advantages can flow from partial reforms.

France and England are the only two countries in Europe where a reformation in Government could have successfully begun. The one secure by the ocean, and the other by the immensity of its internal strength, could defy the malignancy of foreign despotism. But it is with Revolutions as with commerce, the advantages increase by their becoming general, and double to either what each would receive alone.

As a new system is now opening to the view of the world, the European courts are plotting to counteract it. Alliances, contrary to all former sys-

tems, are agitating, and a common interest of Courts is forming against the common interest of man. This combination draws a line that runs throughout Europe, and presents a cause so entirely new as to exclude all calculations from former circumstances. While despotism warred with despotism, man had no interest in the contest; but in a cause that unites the soldier with the citizen, and Nation with Nation, the despotism of Courts, though it feels the danger, and meditates revenge, is afraid to strike.

No question has arisen within the records of history that pressed with the importance of the present. It is not whether this or that party shall be in or not, or Whig or Tory, or high or low shall prevail; but whether man shall inherit his rights, and universal civilization take place? Whether the fruits of his labours shall be enjoyed by himself or consumed by the profligacy of Governments? Whether robbery shall be banished from Courts, and wretchedness from countries?

When, in countries that are called civilized, we see age going to the workhouse and youth to the gallows, something must be wrong in the system of Government. It would seem, by the exterior appearances of such countries, that all was happiness; but there lies hidden from the eye of common observation, a mass of wretchedness that has scarcely any other chance, than to expire in poverty or infamy. Its entrance into life is marked with the presage of its fate; and until this is remedied, it is in vain to punish.

Civil Government does not consist in executions; but in making that provision for the instruction of youth and the support of age, as to exclude, as much as possible, profligacy from the one and despair from the other. Instead of this, the resources of a country are lavished upon kings, upon Courts, upon hirelings, imposters and prostitutes; and even the poor themselves, with all their wants upon them, are compelled to support the fraud that oppresses them.

Why is it that scarcely any are executed but the poor? The fact is a proof, among other things, of a wretchedness in their condition. Bred up without morals, and cast upon the world without a prospect, they are the exposed sacrifice of vice and legal barbarity. The millions that are superfluously wasted upon Governments are more than sufficient to reform those evils, and to benefit the condition of every man in a Nation, not included within the purlieu of a Court. This I hope to make appear in the progress of this work.

It is the nature of compassion to associate with misfortune. In taking

up this subject I seek no recompence—I fear no consequence. Fortified with that proud integrity that disdains to triumph or to yield, I will advocate the Rights of Man.

It is to my advantage that I have served an apprenticeship to life. I know the value of moral instruction, and I have seen the danger of the contrary.

At an early period, little more than sixteen years of age, raw and adventurous, and heated with the false heroism of a master who had served in a man-of-war, I began the carver of my own fortune, and entered on board the Terrible Privateer, Captain Death. From this adventure I was happily prevented by the affectionate and moral remonstrance of a good father, who, from his own habits of life, being of the Quaker profession, must begin to look upon me as lost. But the impression, much as it affected at the time, began to wear away, and I entered afterwards in the King of Prussia Privateer, Captain Mendez, and went with her to sea. Yet from such a beginning, and with all the inconvenience of early life against me, I am proud to say that with a perseverance undismayed by difficulties, a disinterestedness that compelled respect, I have not only contributed to raise a new empire in the world, founded on a new system of Government, but I have arrived at an eminence in political literature, the most difficult of all lines to succeed and excel in, which Aristocracy with all its aids has not been able to reach or to rival.

Knowing my own heart and feeling myself as I now do, superior to all the skirmish of party, the inveteracy of interested or mistaken opponents, I answer not to falsehood or abuse, but proceed to the defects of the English Government.

I begin with charters and corporations.

It is a perversion of terms to say that a charter gives rights. It operates by a contrary effect—that of taking rights away. Rights are inherently in all the inhabitants; but charters, by annulling those rights in the majority, leave the right, by exclusion, in the hands of a few. If charters were constructed so as to express in direct terms, "*that every inhabitant, who is not a member of a corporation, shall not exercise the right of voting,*" such charters would, in the face, be charters not of rights, but of exclusion. The effect is the same under the form they now stand; and the only persons on whom they operate are the persons whom they exclude. Those whose rights are guaranteed, by not being taken away, exercise no other rights than as members of the community they are entitled to without a charter; and, therefore, all charters have no other than an indirect

negative operation. They do not give rights to A, but they make a difference in favour of A by taking away the right of B, and consequently are instruments of injustice.

But charters and corporations have a more extensive evil effect than what relates merely to elections. They are sources of endless contentions in the places where they exist, and they lessen the common rights of national society. A native of England, under the operation of these charters and corporations, cannot be said to be an Englishman in the full sense of the word. He is not free of the Nation in the same manner that a Frenchman is free of France, and an American of America. His rights are circumscribed to the town, and in some cases to the parish of his birth; and all other parts, though in his native land, are to him as a foreign country. To acquire a residence in these he must undergo a local naturalization by purchase, or he is forbidden or expelled the place. This species of feudality is kept up to aggrandize the corporations at the ruin of towns; and the effect is visible.

The generality of corporation towns are in a state of solitary decay, and prevented from further ruin only by some circumstance in their situation, such as a navigable river, or a plentiful surrounding country. As population is one of the chief sources of wealth (for without it land itself has no value), everything which operates to prevent it must lessen the value of property; and as corporations have not only this tendency, but directly this effect, they cannot be but injurious. If any policy were to be followed, instead of that of general freedom to every person to settle where he choose (as in France or America) it would be more consistent to give encouragement to new comers than to preclude their admission by exacting premiums from them.

The persons most immediately interested in the abolition of corporations are the inhabitants of the towns where corporations are established. The instances of Manchester, Birmingham, and Sheffield shew, by contrast, the injury which those Gothic institutions are to property and commerce. A few examples may be found, such as that of London, whose natural and commercial advantages, owing to its situation on the Thames, is capable of bearing up against the political evils of a corporation; but in almost all other cases the fatality is too visible to be doubted or denied.

Though the whole Nation is not so directly affected by the depression of property in corporation towns as the inhabitants themselves, it partakes of the consequence. By lessening the value of property, the quantity of national commerce is curtailed. Every man is a customer in proportion to his ability; and as all parts of the Nation trade with each other, what-

ever affects any of the parts must necessarily communicate to the whole.

As one of the houses of the English Parliament is, in a great measure, made up of elections from these corporations; and as it is unnatural that a pure stream should flow from a foul fountain, its vices are but a continuation of the vices of its origin. A man of moral honour and good political principles cannot submit to the mean drudgery and disgraceful arts by which such elections are carried. To be a successful candidate he must be destitute of the qualities that constitute a just legislator; and being thus disciplined to corruption by the mode of entering into Parliament, it is not to be expected that the representative should be better than the man.

Mr. Burke, in speaking of the English representation, has advanced as bold a challenge as ever was given in the days of chivalry. "Our representation," says he, "has been found *perfectly adequate to all the purposes* for which a representation of the people can be desired or devised. I defy," continues he, "the enemies of our Constitution to shew the contrary." This declaration from a man who has been in constant opposition to all the measures of Parliament the whole of his political life, a year or two excepted, is most extraordinary; and, comparing him with himself, admits of no other alternative than that he acted against his judgment as a member, or has declared contrary to it as an author.

But it is not in the representation only that the defects lie, and therefore I proceed in the next place to the Aristocracy.

What is called the House of Peers is constituted on a ground very similar to that against which there is a law in other cases. It amounts to a combination of persons in one common interest. No reason can be given why a house of legislation should be composed entirely of men whose occupation consists in letting landed property, than why it should be composed of those who hire, or of brewers, or bakers, or any other separate class of men.

Mr. Burke calls this house "*the great ground and pillar of security to the landed interest.*" Let us examine this idea.

What pillar of security does the landed interest require more than any other interest in the state, or what right has it to a distinct and separate representation from the general interest of a Nation? The only use to be made of this power (and which it has always made) is to ward off taxes from itself, and throw the burden upon such articles of consumption by which itself would be least affected.

That this has been the consequence (and will always be the conse-

quence) of constructing Governments on combinations, is evident with respect to England from the history of its taxes.

Notwithstanding taxes have increased and multiplied upon every article of common consumption, the land-tax, which more particularly affects this "pillar," has diminished. In 1788 the amount of the land-tax was £1,950,000, which is half-a-million less than it produced almost a hundred years ago, notwithstanding the rentals are in many instances doubled since that period.

Before the coming of the Hanoverians, the taxes were divided in nearly equal proportions between the land and articles of consumption, the land bearing rather the largest share; but since that æra nearly thirteen millions annually of new taxes have been thrown upon consumption; the consequence of which has been a constant encrease in the number and wretchedness of the poor, and in the amount of the poor rates. Yet here again the burden does not fall in equal proportions on the Aristocracy with the rest of the community. Their residences, whether in town or country, are not mixed with the habitations of the poor. They live apart from distress and the expence of relieving it. It is in manufacturing towns and labouring villages that those burdens press the heaviest, in many of which it is one class of poor supporting another.

Several of the most heavy and productive taxes are so contrived as to give an exemption to this pillar, thus standing in its own defence. The tax upon beer brewed for sale does not affect the Aristocracy, who brew their own beer free of this duty. It falls only on those who have not conveniency or ability to brew, and who must purchase it in small quantities. But what will mankind think of the justice of taxation when they know that this tax alone, from which the Aristocracy are from circumstances exempt, is nearly equal to the whole of the land-tax, being in the year 1788, and it is not less now, £1,666,152, and with its proportion of the taxes on malt and hops, it exceeds it. That a single article, thus partially consumed, and that chiefly by the working part, should be subject to a tax, equal to that on the whole rental of a Nation, is, perhaps, a fact not to be paralleled in the histories of revenues.

This is one of the consequences resulting from a house of legislation composed on the ground of a combination of common interest; for whatever their separate politics as to parties may be, in this they are united. Whether a combination acts to raise the price of any article for sale, or the rate of wages, or whether it acts to throw taxes from itself upon another class of the community, the principle and the effect are the same;

and if the one be illegal, it will be difficult to shew that the other ought to exist.

It is to no use to say that taxes are first proposed in the House of Commons; for as the other House has always a negative it can always defend itself; and it would be ridiculous to suppose that its acquiescence in the measures to be proposed were not understood beforehand. Besides which it has obtained so much influence by borough-traffic, and so many of its relations and connections are distributed on both sides of the Commons, as to give it, besides an absolute negative in one House, a preponderancy in the other in all matters of common concern.

It is difficult to discover what is meant by the *landed interest*, if it does not mean a combination of aristocratical landholders opposing their own pecuniary interest to that of the farmer, and every branch of trade, commerce, and manufacture. In all other respects it is the only interest that needs no partial protection. It enjoys the general protection of the world. Every individual, high or low, is interested in the fruits of the earth; men, women, and children, of all ages and degrees, will turn out to assist the farmer, rather than a harvest should not be got in; and they will not act thus by any other property. It is the only one for which the common prayer of mankind is put up, and the only one that can never fail from the want of means. It is the interest, not of the policy, but of the existence of man, and when it ceases he must cease to be.

No other interest in a Nation stands on the same united support. Commerce, manufactures, arts, sciences, and everything else, compared with this, are supported but in parts. Their prosperity or their decay has not the same universal influence. When the vallies laugh and sing it is not the farmer only but all creation that rejoices. It is a prosperity that excludes all envy; and this cannot be said of anything else.

Why, then, does Mr. Burke talk of his House of Peers as the pillar of the landed interest? Were that pillar to sink into the earth, the same landed property would continue, and the same ploughing, sowing, and reaping would go on. The Aristocracy are not the farmers who work the land and raise the produce, but are the mere consumers of the rent; and when compared with the active world, are the drones, a seraglio of males, who neither collect the honey nor form the hive, but exist only for lazy employment.

Mr. Burke, in his first essay, called Aristocracy "*the Corinthian capital of polished society*." Towards compleating the figure he has now added the *pillar*; but still the base is wanting: and whenever a Nation chuse

to act a Samson, not blind, but bold, down go the temple of Dagon, the Lords and the Philistines.

If a house of legislation is to be composed of men of one class for the purpose of protecting a distinct interest, all the other interests should have the same. The inequality as well as the burden of taxation arises from admitting it in one case and not in all. Had there been a house of farmers, there had been no game laws; or a house of merchants and manufacturers, the taxes had neither been so unequal nor so excessive. It is from the power of taxation being in the hands of those who can throw so great a part of it from their own shoulders, that it has raged without a check.

Men of small or moderate estates are more injured by the taxes being thrown on articles of consumption than they are eased by warding it from landed property for the following reasons:

First, They consume more of the productive taxable articles, in proportion to their property, than those of large estates.

Secondly, their residence is chiefly in towns, and their property in houses; and the encrease of the poor-rates, occasioned by taxes on consumption, is in much greater proportion than the land-tax has been favoured. In Birmingham, the poor-rates are not less than seven shillings in the pound. From this, as already observed, the Aristocracy are in a great measure exempt.

These are but a part of the mischiefs flowing from the wretched scheme of a House of Peers.

As a combination, it can always throw a considerable portion of taxes from itself; and as an hereditary house, accountable to nobody, it resembles a rotten borough, whose consent is to be courted by interest. There are but a few of its members, who are not in some mode or other participators, or disposers of the public money. One turns a candleholder, or a lord in waiting; another a lord of the bed-chamber, a groom of the stole, or any insignificant nominal office to which a salary is annexed, paid out of the public taxes, and which avoids the direct appearance of corruption. Such situations are derogatory to the character of man; and where they can be submitted to, honour cannot reside.

To all these are to be added the numerous dependants, the long list of younger branches and distant relations, who are to be provided for at the public expence; in short, were an estimation to be made of the charge of Aristocracy to a Nation, it will be found nearly equal to that of supporting the poor. The Duke of Richmond alone (and there are cases

similar to his) takes away as much for himself as would maintain two thousand poor and aged persons. Is it, then, any wonder that under such a system of Government, taxes and rates have multiplied to their present extent?

In stating these matters, I speak an open and disengaged language dictated by no passion but that of humanity. To me, who have not only refused offers because I thought them improper, but have declined rewards I might with reputation have accepted, it is no wonder that meanness and imposition appear disgusting. Independence is my happiness, and I view things as they are, without regard to place or person; my country is the world, and my religion is to do good.

Mr. Burke, in speaking of the aristocratical law of primogeniture, says: "It is the standing law of our landed inheritance; and which, without question, has a tendency, and I think," continues he, "a happy tendency, to preserve a character of weight and consequence."

Mr. Burke may call this law what he pleases, but humanity and impartial reflection will denounce it a law of brutal injustice. Were he not accustomed to the daily practice, and did we only hear of that as the law of some distant part of the world, we should conclude that the legislators of such countries had not yet arrived at a state of civilization.

As to its preserving a character of *weight and consequence*, the case appears to me directly the reverse. It is an attain upon character; a sort of privateering on family property. It may have weight among dependent tenants, but it gives none on a scale of national, and much less of universal, character. Speaking for myself, my parents were not able to give me a shilling beyond what they gave me in education; and to do this they distressed themselves; yet I possess more of what is called consequence in the world, than any one in Mr. Burke's catalogue of aristocrats.

Having thus glanced at some of the defects of the two Houses of Parliament, I proceed to what is called the Crown, upon which I shall be very concise.

It signifies a nominal office of a million sterling a-year, the business of which consists in receiving the money. Whether the person be wise or foolish, sane or insane, a native or a foreigner, matters not. Every Ministry acts upon the same idea that Mr. Burke writes, namely, that the people must be hood-winked, and held in superstitious ignorance by some bugbear or other; and what is called the Crown answers this purpose, and therefore it answers all the purposes to be expected from it. This is more than can be said of the other two branches.

The hazard to which this office is exposed in all countries is not from anything that can happen to the man, but from what may happen to the Nation—the danger of its coming to its senses.

It has been customary to call the Crown the executive power, and the custom is continued, though the reason has ceased.

It was called the *executive*, because the person whom it signified used formerly to sit in the character of a judge, in administering or executing the laws. The tribunals were then a part of the Court. The power, therefore, which is now called the judicial, is what was called the executive; and, consequently, one or other of the terms is redundant, and one of the offices useless. We speak of the Crown now, it means nothing; it signifies neither a judge nor a general; besides which it is the laws that govern, and not the man. The old terms are kept up, to give an appearance of consequence to empty forms; and the only effect they have is that of encreasing expenses.

Before I proceed to the means of rendering Governments more conducive to the general happiness of mankind than they are at present, it will not be improper to take a review of the progress of taxation in England.

It is a general idea, that when taxes are once laid on, they are never taken off. However true this may have been of late, it was not always so. Either, therefore, the people of former times were more watchful over Government than those of the present, or Government was administered with less extravagance.

It is now seven hundred years since the Norman Conquest, and the establishment of what is called the Crown. Taking this portion of time in seven separate periods of one hundred years each, the amount of the annual taxes, at each period, will be as follows:—

Annual amount of taxes levied by William the Conqueror, beginning in the year 1066.....	£400,000
Annual amount of taxes at one hundred years from the Conquest (1166).....	200,000
Annual amount of taxes at two hundred years from the Conquest (1266).....	150,000
Annual amount of taxes at three hundred years from the Conquest (1366).....	130,000
Annual amount of taxes at four hundred years from the Conquest (1466).....	100,000

These statements and those which follow, are taken from Sir John Sinclair's *History of the Revenue*; by which it appears, that taxes con-

tinued decreasing for four hundred years, at the expiration of which time they were reduced three-fourths, viz., from four hundred thousand pounds to one hundred thousand. The people of England of the present day, have a traditionary and historical idea of the bravery of their ancestors; but whatever their virtues or their vices might have been, they certainly were a people who would not be imposed upon, and who kept Government in awe as to taxation, if not as to principle. Though they were not able to expel the monarchical usurpation, they restricted it to a republican œconomy of taxes.

Let us now review the remaining three hundred years.

Annual amount of taxes at five hundred years from the Conquest (1566).....	£500,000
Annual amount of taxes at six hundred years from the Conquest (1666).....	1,800,000
Annual amount of taxes at the present time (1791)	17,000,000

The difference between the first four hundred years and the last three is so astonishing, as to warrant an opinion that the national character of the English has changed. It would have been impossible to have dragooned the former English into the excess of taxation that now exists; and when it is considered that the pay of the army, the navy, and of all the revenue officers, is the same now as it was above a hundred years ago, when the taxes were not above a tenth part of what they are at present, it appears impossible to account for the enormous expenditure on any other ground than extravagance, corruption and intrigue.

With the Revolution of 1688, and more so since the Hanover succession, came the destructive system of continental intrigues, and the rage for foreign wars and foreign dominion; systems of such secure mystery that the expences admit of no accounts; a single line stands for millions. To what excess taxation might have extended, had not the French Revolution contributed to break up the system, and put an end to pretences, is impossible to say. Viewed, as that Revolution ought to be, as the fortunate means of lessening the load of taxes of both countries, it is of as much importance to England as to France; and, if properly improved to all the advantages of which it is capable, and to which it leads, deserves as much celebration in one country as the other.

In pursuing this subject, I shall begin with the matter that first presents itself, that of lessening the burden of taxes; and shall then add such matters and propositions, respecting the three countries of England, France and America, as the present prospect of things appears to justify. I

mean, an alliance of the three, for the purposes that will be mentioned in their proper place.

What has happened may happen again. By the statement before shown of the progress of taxation, it is seen that taxes have been lessened to a fourth part of what they had formerly been. Though the present circumstances do not admit of the same reduction, yet it admits of such a beginning as may accomplish that end in less time than in the former case.

The amount of taxes for the year ending at Michaelmas, 1788, was as follows:—

Land tax	£1,950,000
Customs	3,789,274
Excise (including old and new malt)	6,751,727
Stamps	1,278,214
Miscellaneous taxes and incidents	1,803,755
	<hr/>
	£15,572,970

Since the year 1788 upwards of one million of new taxes have been laid on, besides the produce from the lotteries, and as the taxes have in general been more productive since than before, the amount may be taken in round numbers at £17,000,000.

N.B.—The expence of collection and the drawbacks, which together amount to nearly two millions, are paid out of the gross amount, and the above is the nett sum paid into the exchequer.

This sum of seventeen millions is applied to two different purposes, the one to pay the interest of the national debt, the other to the current expences of each other. About nine millions are appropriated to the former, and the remainder, being nearly eight millions, to the latter. As to the million said to be applied to the reduction of the debt, it is so much like paying with one hand and taking out with the other as not to merit much notice.

It happened fortunately for France that she possessed national domains for paying off her debt, and thereby lessening her taxes; but as this is not the case in England, her reduction of taxes can only take place by reducing the current expences, which may now be done to the amount of four or five millions annually, as will hereafter appear. When this is accomplished it will more than counterbalance the enormous charge of the American War, and the saving will be from the same source from whence the evil arose.

As to the national debt, however heavy the interest may be in taxes, yet as it serves to keep alive a capital useful to commerce, it balances by its effects a considerable part of its own weight; and as the quantity of gold

and silver in England, is by some means or other, short of its proper proportion (being not more than twenty millions whereas it should be sixty) it would, besides the injustice, be bad policy to extinguish a capital that serves to supply that defect. But with respect to the current expence whatever is saved therefrom is gain. The excess may serve to keep corruption alive, but it has no reaction on credit and commerce like the interest of the debt.

It is now very probable that the English Government (I do not mean the Nation) is unfriendly to the French Revolution. Whatever serves to expose the intrigue and lessen the influence of courts by lessening taxation will be unwelcome to those who feed upon the spoil. Whilst the clamour of French intrigue, arbitrary power, Popery, and wooden shoes could be kept up the Nation was easily allured and alarmed into taxes. Those days are now past; deception, it is to be hoped, has reaped its last harvest, and better times are in prospect for both countries and for the world.

Taking it for granted that an alliance may be formed between England, France and America for the purposes hereafter to be mentioned, the national expences of France and England may consequently be lessened. The same fleets and armies will no longer be necessary to either, and the reduction can be made ship for ship on each side. But to accomplish these objects the Governments must necessarily be fitted to a common and correspondent principle. Confidence can never take place while an hostile disposition remains in either, or where mystery and secrecy on one side is opposed to candour and openness on the other.

These matters admitted, the national expences might be put back *for the sake of a precedent*, to what they were at some period when France and England were not enemies. This, consequently, must be prior to the Hanover succession, and also to the Revolution of 1688. The first instance that presents itself, antecedent to those dates, is in the very wasteful and profligate times of Charles the Second; at which time England and France acted as allies. If I have chosen a period of great extravagance it will serve to show modern extravagance in a still worse light; especially as the pay of the navy, the army, and the revenue officers has not encreased since that time.

The peace establishment was then as follows (see Sir John Sinclair's "History of the Revenue") :—

Navy	£300,000
Army	212,000
Ordnance	40,000
Civil List	462,115
	<hr/>
	£1,014,115

The Parliament, however, settled the whole annual peace establishment at £1,200,000. If we go back to the time of Elizabeth the amount of all the taxes was but half a million, yet the Nation sees nothing during that period that reproaches it with want of consequence.

All circumstances, then, taken together, arising from the French Revolution, from the approaching harmony and reciprocal interest of the two nations, the abolition of our Court intrigue on both sides, and the progress of knowledge in the science of Government, the annual expenditure might be put back to one million and a half, viz.:—

Navy	£500,000
Army	500,000
Expences of government	500,000
	<hr/> £1,500,000

Even this sum is six times greater than the expences of Government are in America, yet the civil internal Government in England (I mean that administered by means of quarter sessions, juries, and assize, and which, in fact, is nearly the whole, and performed by the Nation), is less expence upon the revenue than the same species and portion of Government is in America.

It is time that Nations should be rational, and not be governed like animals, for the pleasure of their riders. To read the history of Kings, a man would be almost inclined to suppose that Government consisted in stag-hunting, and that every Nation paid a million a-year to a huntsman. Man ought to have pride or shame enough to blush at being thus imposed upon, and when he feels his proper character he will. Upon all subjects of this nature, there is often passing in the mind a train of ideas he has not yet accustomed himself to encourage and communicate. Restrained by something that puts on the character of prudence, he acts the hypocrite upon himself as well as to others. It is, however, curious to observe how soon this spell can be dissolved. A single expression, boldly conceived and uttered, will sometimes put a whole company into their proper feelings: and whole Nations are acted upon in the same manner.

As to the offices of which any civil Government may be composed, it matters but little by what names they are described. In the routine of business, as before observed, whether a man be styled a president, a King, an Emperor, a senator, or anything else, it is impossible that any service he can perform can merit from a Nation more than ten thousand pounds a year; and as no man should be paid beyond his services, so every man of a proper heart will not accept more. Public money ought to be touched with the most scrupulous consciousness of honour. It is not the produce

of riches only, but of the hard earnings of labour and poverty. It is drawn even from the bitterness of want and misery. Not a beggar passes, or perishes in the streets, whose mite is not in that mass.

Were it possible that the Congress of America could be so lost to their duty, and to the interest of their constituents, as to offer General Washington, as President of America, a million a year, he would not, and he could not, accept it. His sense of honour is of another kind. It has cost England almost seventy millions sterling to maintain a family imported from abroad, of very inferior capacity to thousands in the nation; and scarcely a year has passed that has not produced some new mercenary application. Even the physicians' bills have been sent to the public to be paid. No wonder that jails are crowded, and taxes and poor rates increased. Under such systems, nothing is to be looked for but what has already happened; and as to reformation, whenever it comes, it must be from the Nation, and not from the Government.

To show that the sum of five hundred thousand is more than sufficient to defray all the expences of Government, exclusive of navies and armies, the following estimate is added, for any country of the same extent as England.

In the first place, three hundred representatives fairly selected, are sufficient for all the purposes to which legislation can apply, and preferable to a larger number. They may be divided into two or three houses, or meet in one, as in France, or in any manner a Constitution shall direct.

As representation is always considered in free countries as the most honourable of all stations, the allowance made to it is merely to defray the expence which the representatives incur by that service, and not to it as an office.

If an allowance, at the rate of five hundred pounds per annum, be made to every representative, deducting for non-attendance, the expence, if the whole number attended for six months each year would be £75,000

The official departments cannot reasonably exceed the following number, with the salaries annexed:—

Three offices at ten thousand pounds each.....	£30,000
Ten ditto, at five thousand pounds each.....	50,000
Twenty ditto, at two thousand pounds each.....	40,000
Forty ditto, at one thousand pounds each.....	40,000
Two hundred ditto, at five hundred pounds each.....	100,000
Three hundred ditto, at two hundred pounds each.....	60,000
Five hundred ditto, at one hundred pounds each.....	50,000
Seven hundred ditto, at seventy-five pounds each.....	52,500
	<hr/>
	£497,500

If a Nation chuse, it can deduct four per cent. from all offices, and make one of twenty thousand per annum.

All revenue officers are paid out of the monies they collect, and therefore are not in this estimation.

The foregoing is not offered as an exact detail of offices, but to show the number and rate of salaries which five hundred thousand pounds will support; and it will, on experience, be found impracticable to find business sufficient to justify even this expence. As to the manner in which office business is now performed, the chiefs in several offices, such as the post office and certain offices in the exchequer, etc., do little more than sign their names three or four times a year; and the whole duty is performed by under-clerks.

Taking, therefore, one million and a half as a sufficient peace establishment for all the honest purposes of Government, which is three hundred thousand pounds more than the peace establishment in the profligate and prodigal times of Charles the Second (notwithstanding, as has been already observed, the pay and salaries of the army, navy, and revenue officers continue the same as at that period), there will remain a surplus of upwards of six millions out of the present current expences. The question then will be, how to dispose of this surplus?

Whoever has observed the manner in which trade and taxes twist themselves together, must be sensible of the impossibility of separating them suddenly.

First. Because the articles now on hand are already charged with the duty; and the reduction cannot take place on the present stock.

Secondly. Because, on all those articles on which the duty is charged on the gross, such as per barrel, hogshead, hundredweight or ton, the abolition of the duty does not admit of being divided down so as fully to relieve the consumer, who purchases by the pint, or the pound. The last duty on strong beer and ale, was three shillings per barrel, which, if taken off, would lessen the purchase only half a farthing per pint, and consequently, would not reach to practical relief.

This being the condition of a great part of the taxes, it will be necessary to look for such others as are free from this embarrassment and where the relief will be direct and visible, and capable of immediate operation.

In the first place, then, the poor-rates are a direct tax which every housekeeper feels, and who knows also, to a farthing, the sum which he pays. The national amount of the whole of the poor-rates is not positively known, but can be procured. Sir John Sinclair, in his *History of the Revenue*, has stated it at £2,100,587. A considerable part of which is

expended in litigations, in which the poor, instead of being relieved are tormented. The expence, however, is the same to the parish from whatever cause it arises.

In Birmingham the amount of the poor-rates is fourteen thousand pounds a year. This, though a large sum, is moderate compared with the population. Birmingham is said to contain seventy thousand souls, and on a proportion of seventy thousand to fourteen thousand pounds poor-rates, the national amount of poor-rates, taking the population of England at seven millions, would be but one million four hundred thousand pounds. It is, therefore, most probable, that the population of Birmingham is over-rated. Fourteen thousand pounds is the proportion upon fifty thousand souls, taking two millions of poor-rates, as the national amount.

Be it, however, what it may, it is no other than the consequence of the excessive burden of taxes, for, at the time when the taxes were very low, the poor were able to maintain themselves; and there were no poor-rates. In the present state of things a labouring man, with a wife and two or three children, does not pay less than between seven and eight pounds a year in taxes. He is not sensible of this, because it is disguised to him in the articles which he buys, and he thinks only of their dearness; but as the taxes take from him, at least, a fourth of his yearly earnings, he is consequently disabled from providing for a family, especially if himself or any of them are afflicted with sickness.

The first step, therefore, of practical relief, would be to abolish the poor-rates entirely, and in lieu thereof, to make a remission of taxes to the poor of double the amount of the present poor-rates, viz., four millions annually, out of the surplus taxes. By this measure, the poor will be benefited two millions, and the housekeepers two millions. This alone would be equal to a reduction of one hundred and twenty millions of the National Debt, and consequently equal to the whole expence of the American War.

It will then remain to be considered, which is the most effectual mode of distributing this remission of four millions.

It is easily seen, that the poor are generally composed of large families of children, and old people past their labour. If these two classes are provided for, the remedy will so far reach to the full extent of the case, that what remains will be incidental, and in a great measure, fall within the compass of benefit clubs, which, though of humble invention, merit to be ranked among the best of modern institutions.

Admitting England to contain seven millions of souls; if one-fifth

thereof are of that class of poor which need support, the number will be one million four hundred thousand. Of this number, one hundred and forty thousand will be aged poor, as will be hereafter shown, and for which a distinct provision will be proposed.

There will remain one million two hundred and sixty thousand which, at five souls to each family, amount to two hundred and fifty-two thousand families, rendered poor from the expence of children and the weight of taxes.

The number of children under fourteen years of age, in each of those families, will be found to be about five to every two families; some having two, and others three; some one, and others four: some none, and others five; but it rarely happens that more than five are under fourteen years of age, and after this age they are capable of service or of being apprenticed.

Allowing five children (under fourteen years) to every two families,

The number of children would be.....	630,000
The number of parents, were they all living, would be.....	504,000

It is certain, that if the children are provided for, the parents are relieved of consequence, because it is from the expence of bringing up children that their poverty arises.

Having thus ascertained the greatest number that can be supposed to need support on account of young families, I proceed to the mode of relief or distribution, which is,

To pay as a remission of taxes to every poor family, out of the surplus taxes, and in room of poor-rates, four pounds a-year for every child under fourteen years of age; enjoining the parents of such children to send them to school, to learn reading, writing, and common arithmetic; the ministers of every parish, of every denomination to certify jointly to an office, for that purpose, that this duty is performed. The amount of this expence will be,

For six hundred and thirty thousand children at £4 per annum each £2,520,000

By adopting this method, not only the poverty of the parents will be relieved, but ignorance will be banished from the rising generation, and the number of poor will hereafter become less, because their abilities, by the aid of education, will be greater. Many a youth, with good natural genius, who is apprenticed to a mechanical trade, such as a carpenter, joiner, millwright, shipwright, blacksmith, etc., is prevented getting for-

ward the whole of his life from the want of a little common education when a boy.

I now proceed to the case of the aged.

I divide age into two classes. First, the approach of age, beginning at fifty. Secondly, old age commencing at sixty.

At fifty, though the mental faculties of man are in full vigour, and his judgment better than at any preceding date, the bodily powers for laborious life are on the decline. He cannot bear the same quantity of fatigue as at an earlier period. He begins to earn less, and is less capable of enduring wind and weather; and in those retired employments where much sight is required, he fails apace, and sees himself, like an old horse, beginning to be turned adrift.

At sixty his labour ought to be over, at least from direct necessity. It is painful to see old age working itself to death, in what are called civilized countries for daily bread.

To form some judgment of the number of those above fifty years of age, I have several times counted the persons I met in the streets of London, men, women, and children, and have generally found that the average is about one in sixteen or seventeen. If it be said that aged persons do not come much in the streets, so neither do infants; and a great proportion of grown children are in schools and in workshops as apprentices. Taking, then, sixteen for a divisor, the whole number of persons in England of fifty years and upwards, both sexes, rich and poor, will be four hundred and twenty thousand.

The persons to be provided for out of this gross number will be husbandmen, common labourers, journeymen of every trade and their wives, sailors, and disbanded soldiers, worn out servants of both sexes, and poor widows.

There will be also a considerable number of middling tradesmen, who having lived decently in the former part of life, begin, as age approaches, to lose their business, and at last fall to decay.

Besides these there will be constantly thrown off from the revolutions of that wheel which no man can stop nor regulate, a number from every class of life connected with commerce and adventure.

To provide for all those accidents, and whatever else may befall, I take the number of persons who, at one time or other of their lives, after fifty years of age, may feel it necessary or comfortable to be better supported than they can support themselves, and that not as a matter of grace and favour, but of right, at one-third of the whole number, which is one hundred and forty thousand, and for whom a distinct provision was pro-

posed to be made. If there be more, society, notwithstanding the show and pomposity of Government, is in a deplorable condition in England.

Of this one hundred and forty thousand, I take one half, seventy thousand, to be of the age of fifty and under sixty, and the other half to be sixty years and upwards. Having thus ascertained the probable proportion of the number of aged persons, I proceed to the mode of rendering their condition comfortable, which is,

To pay every such person of the age of fifty years, and until he shall arrive at the age of sixty, the sum of six pounds per annum out of the surplus taxes, and ten pounds per annum during life after the age of sixty. The expence of which will be,

Seventy thousand persons, at £6 per annum.....	£420,000
Seventy thousand ditto, at £10 per annum.....	700,000
	<hr/> £1,120,000

This support, as already remarked, is not of the nature of a charity but of a right. Every person in England, male and female, pays on an average in taxes two pounds eight shillings and sixpence per annum from the day of his (or her) birth; and if the expence of collection be added, he pays two pounds eleven shillings and sixpence; consequently, at the end of fifty years he has paid one hundred and twenty-eight pounds fifteen shillings, and at sixty one hundred and fifty-four pounds ten shillings. Converting, therefore, his (or her) individual tax into a tontine, the money he shall receive after fifty years is but little more than the legal interest of the nett money he has paid; the rest is made up from those whose circumstances do not require them to draw such support, and the capital in both cases defrays the expences of Government. It is on this ground that I have extended the probable claims to one-third of the number of aged persons in the Nation. Is it, then, better that the lives of one hundred and forty thousand aged persons be rendered comfortable, or that a million a year of public money be expended on any one individual, and him often of the most worthless or insignificant character? Let reason and justice, let honour and humanity, let even hypocrisy, sycophancy and Mr. Burke, let George, let Louis, Leopold, Frederic, Catherine, Cornwallis, or Tippoo Saib, answer the question.

The sum thus remitted to the poor will be,

To two hundred and fifty-two thousand poor families, containing six hundred and thirty thousand children.....	£2,520,000
To one hundred and forty thousand aged persons.....	1,120,000
	<hr/> £3,640,000

There will then remain three hundred and sixty thousand pounds out of the four millions, part of which may be applied as follows:—

After all the above cases are provided for there will still be a number of families who, though not properly of the class of poor, yet find it difficult to give education to their children; and such children, under such a case, would be in a worse condition than if their parents were actually poor. A Nation under a well-regulated Government should permit none to remain uninstructed. It is monarchical and aristocratical Government only that requires ignorance for its support.

Suppose, then, four hundred thousand children to be in this condition, which is a greater number than ought to be supposed after the provisions already made, the method will be:

To allow for each of those children ten shillings a year for the expence of schooling for six years each, which will give them six months' schooling each year, and half-a-crown a year for paper and spelling books.

The expence of this will be annually £250,000.

shillings per head, men, women, and children. The difference, therefore, between the two Governments is as under:—

	England			America		
	£	s.	d.	£	s.	d.
For a family of five persons	14	17	6	1	5	0
For a family of six persons	17	17	0	1	10	0
For a family of seven persons	20	16	6	1	15	0

There will then remain one hundred and ten thousand pounds.

Notwithstanding the great modes of relief which the best instituted and best principled Government may devise, there will still be a number of smaller cases, which it is good policy as well as beneficence in a Nation to consider.

Were twenty shillings to be given immediately on the birth of a child, to every woman who should make the demand, and none will make it whose circumstances do not require it, it might relieve a great deal of instant distress.

There are about two hundred thousand births yearly in England, and if claimed, by one fourth,

The amount would be £50,000.

And twenty shillings to every new-married couple who should claim in like manner. This would not exceed the sum of £20,000.

Also twenty thousand pounds to be appropriated to defray the funeral expences of persons, who, travelling for work, may die at a distance from their friends. By relieving parishes from this charge, the sick stranger will be better treated.

I shall finish this part of the subject with a plan adapted to the particular condition of a metropolis, such as London.

Cases are continually occurring in a metropolis different to those which occur in the country, and for which a different, or rather an additional, mode of relief is necessary. In the country, even in large towns, people have a knowledge of each other, and distress never rises to that extreme height it sometimes does in a metropolis. There is no such thing in the country as persons, in the literal sense of the word, starved to death, or dying with cold from the want of a lodging. Yet such cases, and others equally as miserable, happen in London.

Many a youth comes up to London full of expectations, and with little or no money, and unless he get immediate employment he is already half-undone; and boys bred up in London without any means of a livelihood, and as it often happens of dissolute parents, are in a still worse condition; and servants long out of place are not much better off. In short, a world of little cases is continually arising, which busy or affluent life knows not of, to open the first door to distress. Hunger is not among the postponeable wants, and a day, even a few hours, in such a condition is often the crisis of a life of ruin.

These circumstances which are the general cause of the little thefts and pilferings that lead to greater, may be prevented. There yet remain twenty thousand pounds out of the four millions of surplus taxes, which with another fund hereafter to be mentioned, amounting to about twenty thousand pounds more, cannot be better applied than to this purpose. The plan then will be:

First,—To erect two or more buildings, or take some already erected, capable of containing at least six thousand persons, and to have in each of these places as many kinds of employment as can be contrived, so that every person who shall come may find something which he or she can do.

Secondly,—To receive all who shall come, without inquiring who or what they are. The only condition to be, that for so much, or so many hours' work, each person shall receive so many meals of wholesome food and a warm lodging, at least as good as a barrack. That a certain portion of what each person's work shall be worth shall be reserved, and given to him or her, on their going away; and that each person shall stay as long or as short a time, or come as often as he chuse, on these conditions.

If each person stayed three months, it would assist by rotation twenty-four thousand persons annually, though the real number, at all times, would be but six thousand. By establishing an asylum of this kind, persons to whom temporary distresses occur would have an opportunity to recruit themselves, and be enabled to look out for better employment.

Allowing that their labour paid but one half the expence of supporting them, after reserving a portion of their earnings for themselves, the sum of forty thousand pounds additional would defray all other charges for even a greater number than six thousand.

The fund very properly convertible to this purpose, in addition to the twenty thousand pounds remaining of the former fund, will be the produce of the tax upon coals, so iniquitously and wantonly applied to the support of the Duke of Richmond. It is horrid that any man, more especially at the price coals now are, should live on the distresses of a community; and any Government permitting such an abuse deserves to be dismissed. This fund is said to be about twenty thousand pounds per annum.

I shall now conclude this plan with enumerating the several particulars, and then proceed to other matters.

The enumeration is as follows:—

First—Abolition of two million poor-rates.

Secondly—Provision for two hundred and fifty-two thousand poor families.

Thirdly—Education for one million and thirty thousand children.

Fourthly—Comfortable provision for one hundred and forty thousand aged persons.

Fifthly—Donation of twenty shillings each for fifty thousand births.

Sixthly—Donation of twenty shillings each for twenty thousand marriages.

Seventhly—Allowance of twenty thousand pounds for the funeral expences of persons travelling for work, and dying at a distance from their friends.

Eighthly—Employment, at all times, for the casual poor in the cities of London and Westminster.

By the operation of this plan, the poor laws, those instruments of civil torture, will be superseded, and the wasteful expence of litigation prevented. The hearts of the humane will not be shocked by ragged and hungry children, and persons of seventy or eighty years of age, begging for bread. The dying poor will not be dragged from place to place to

breathe their last, as a reprisal of parish upon parish. Widows will have a maintenance for their children, and not be carted away, on the death of their husbands, like culprits and criminals; and children will no longer be considered as increasing the distresses of their parents. The haunts of the wretched will be known, because it will be to their advantage, and the number of petty crimes, the offspring of distress and poverty, will be lessened. The poor, as well as the rich, will then be interested in the support of Government, and the cause and apprehension of riots and tumults will cease. Ye who sit in ease, and solace yourselves in plenty—and such there are in Turkey and Russia, as well as in England—and who say to yourselves, “Are we not well off?” have ye thought of these things? When ye do, ye will cease to speak and feel for yourselves alone.

The plan is easy in practice. It does not embarrass trade by a sudden interruption in the order of taxes, but effects the relief by changing the application of them; and the money necessary for the purpose can be drawn from the excise collections, which are made eight times a year in every market town in England.

Having now arranged and concluded this subject, I proceed to the next.

Taking the present current expences at seven millions and a half, which is the least amount they are now at, there will remain (after the sum of one million and a half be taken for the new current expences and four millions for the before-mentioned service) the sum of two millions; part of which to be applied as follows:

Though fleets and armies, by an alliance with France, will, in a great measure, become useless, yet the persons who have devoted themselves to those services, and have thereby unfitted themselves for other lines of life, are not to be sufferers by the means that make others happy. They are a different description of men to those who form or hang about a court.

A part of the army will remain, at least for some years, and also of the navy, for which a provision is already made in the former part of this plan of one million, which is almost half a million more than the peace establishment of the army and navy in the prodigal times of Charles the Second.

Suppose, then, fifteen thousand soldiers to be disbanded, and that an allowance be made to each of three shillings a-week during life, clear of all deductions, to be paid in the same manner as the Chelsea College pensioners are paid, and for them to return to their trades and their friends; and also that an addition of fifteen thousand sixpences per week be made to the pay of the soldiers who shall remain. The annual expence will be:—

To the pay of fifteen thousand disbanded soldiers, at 3s. per week . . .	£117,000
Additional pay to the remaining soldiers	19,500
Suppose that the pay to the officers of the disbanded corps be of the same amount as the sum allowed to the men	117,000
	<u>£253,500</u>
To prevent bulky estimations, admit the same sum to the disbanded navy as to the army, and the same increase of pay	253,500
Total	<u>£507,000</u>

Every year some part of this sum of half a million (I omit the odd seven thousand pounds for the purpose of keeping the account unembarrassed) will fall in, and the whole of it in time, as it is on the ground of life annuities, except the encreased pay of twenty-nine thousand pounds. As it falls in, a part of the taxes may be taken off; for instance, when thirty thousand pounds fall in, the duty on hops may be wholly taken off; and as other parts fall in, the duties on candles and soap may be lessened, till at last they will totally cease. There now remains at least one million and a half of surplus taxes.

The tax on houses and windows is one of those direct taxes which, like the poor rates, is not confounded with trade, and when taken off, the relief will be instantly felt. This tax falls heavy on the middling class of people.

The amount of this tax by the returns of 1788 was—

Houses and windows, by the Act of 1766	£385,459	11	7
Ditto, by the Act of 1779	130,739	14	5½
Total	<u>£516,199</u>	6	0½

If this tax be struck off, there will then remain about one million of surplus taxes; and as it is always proper to keep a sum in reserve for incidental matters, it may be best not to extend reductions further in the first instance, but to consider what may be accomplished by other modes of reform.

Among the taxes most heavily felt is the commutation tax. I shall therefore offer a plan for its abolition, by substituting another in its place, which will effect three objects at once.

First, That of removing the burthen to where it can best be borne.

Secondly, Restoring justice among families by a distribution of property.

Thirdly, Extirpating the overgrown influence arising from the unnatural law of primogeniture, and which is one of the principal sources of corruption at elections.

The amount of the commutation tax by the returns of 1788 was £771,657.

When taxes are proposed, the country is amused by the plausible language of taxing luxuries. One thing is called a luxury at one time, and something else at another; but the real luxury does not consist in the article, but in the means of procuring it, and this is always kept out of sight.

I know not why any plant or herb of the field should be a greater luxury in one country than another; but an overgrown estate in either is a luxury at all times, and, as such, is the proper object of taxation. It is, therefore, right to take those kind tax-making gentlemen upon their own word, and argue on the principle themselves have laid down, that of *taxing luxuries*. If they or their champion, Mr. Burke, who, I fear, is growing out of date, like the man in armour, can prove that an estate of twenty, thirty, or forty thousand pounds a year is not a luxury, I will give up the argument.

Admitting that any annual sum, say, for instance, a thousand pounds, is necessary for the support of a family, consequently the second thousand is of the nature of a luxury, the third still more so, and by proceeding on we shall at last arrive at a sum that may not improperly be called a prohibitable luxury. It would be impolitic to set bounds to property acquired by industry, and therefore it is right to place the prohibition beyond the probable acquisition to which industry can extend; but there ought to be a limit to property or the accumulation of it by bequest. It should pass in some other line. The richest in every Nation have poor relations, and those often very near in consanguinity.

The following table of progressive taxation is constructed on the above principles, and as a substitute for the commutation tax. It will reach the point of prohibition by a regular operation, and thereby supersede the aristocratical law of primogeniture.

TABLE I

A tax on all estates of the clear yearly value of £50, after deducting the land tax, and up

	s.	d.	
To £500	0	3	per pound
From £500 to £1,000	0	6	" "
On the second thousand	0	9	" "
On the third thousand	1	0	" "
On the fourth thousand	1	6	" "
On the fifth thousand	2	0	" "
On the sixth thousand	3	0	" "
On the seventh thousand	4	0	" "
On the eighth thousand	5	0	" "
On the ninth thousand	6	0	" "
On the tenth thousand	7	0	" "
On the eleventh thousand	8	0	" "
On the twelfth thousand	9	0	" "
On the thirteenth thousand	10	0	" "
On the fourteenth thousand	11	0	" "
On the fifteenth thousand	12	0	" "
On the sixteenth thousand	13	0	" "
On the seventeenth thousand	14	0	" "
On the eighteenth thousand	15	0	" "
On the nineteenth thousand	16	0	" "
On the twentieth thousand	17	0	" "
On the twenty-first thousand	18	0	" "
On the twenty-second thousand	19	0	" "
On the twenty-third thousand	20	0	" "

The foregoing table shows the progression per pound on every progressive thousand. The following table shows the amount of the tax on every thousand separately, and in the last column the total amount of all the separate sums collected.

TABLE II

An estate of £50 per annum, at 3d. per pound, pays	£0	12	6
" " 100	"	"	" 1 5 0
" " 200	"	"	" " 2 10 0
" " 300	"	"	" " 3 15 0
" " 400	"	"	" " 5 0 0
" " 500	"	"	" " 7 5 0

After £500 the tax of 6d. per pound takes place on the second £500; consequently an estate of £1,000 per annum pays £21 15s., and so on.

						<i>Total amount</i>	
	£	s.	d.		£ s.	£	s.
1st	£500	at	0 3	per pound	7 5	}	21 15
2nd	"	"	0 6	"	14 10

7th	"	"	4 0	"	200 0	634 5
8th	"	"	5 0	"	250 0	880 5
9th	"	"	6 0	"	300 0	1,180 5
10th	"	"	7 0	"	350 0	1,530 5
11th	"	"	8 0	"	400 0	1,930 5
12th	"	"	9 0	"	450 0	2,380 5
13th	"	"	10 0	"	500 0	2,880 5
14th	"	"	11 0	"	550 0	3,430 5
15th	"	"	12 0	"	600 0	4,030 5
16th	"	"	13 0	"	650 0	4,680 5
17th	"	"	14 0	"	700 0	5,380 5
18th	"	"	15 0	"	750 0	6,130 5
19th	"	"	16 0	"	800 0	6,930 5
20th	"	"	17 0	"	850 0	7,780 5
21st	"	"	18 0	"	900 0	8,680 5
22nd	"	"	19 0	"	950 0	9,630 5
23rd	"	"	20 0	"	1,000 0	10,630 5

At the twenty-third thousand the tax becomes 20s. in the pound, and consequently every thousand beyond that sum can produce no profit but by dividing the estate. Yet, formidable as this tax appears, it will not, I believe, produce so much as the commutation tax: should it produce more, it ought to be lowered to that amount upon estates under two or three thousand a year.

On small and middling estates it is lighter (as it is intended to be) than the commutation tax. It is not till after seven or eight thousand a year that it begins to be heavy. The object is not so much the produce of the tax as the justice of the measure. The Aristocracy has screened itself too much, and this serves to restore a part of the lost equilibrium.

As an instance of its screening itself, it is only necessary to look back to the first establishment of the excise laws, at what is called the Restoration, or the coming of Charles the Second. The aristocratical interest then in power commuted the feudal services itself was under, by laying a tax on beer brewed for *sale*; that is, they compounded with Charles for an exemption from those services for themselves and their heirs by a tax to

be paid by other people. The Aristocracy do not purchase beer brewed for sale, but brew their own beer free of the duty; and if any commutation at that time were necessary, it ought to have been at the expence of those for whom the exemptions from those services were intended; instead of which, it was thrown on an entire different class of men.

But the chief object of this progressive tax (besides the justice of rendering taxes more equal than they are), is, as already stated, to extirpate the overgrown influence arising from the unnatural law of primogeniture, and which is one of the principal sources of corruption at elections.

It would be attended with no good consequences to inquire how such vast estates as thirty, forty, or fifty thousand a year could commence, and that at a time when commerce and manufactures were not in a state to admit of such acquisitions. Let it be sufficient to remedy the evil by putting them in a condition of descending again to the community, by the quiet means of apportioning them among all the heirs and heiresses of those families. This will be the more necessary, because hitherto the Aristocracy have quartered their younger children and connections upon the public, in useless posts, places and offices, which when abolished will leave them destitute, unless the law of primogeniture be also abolished or superseded.

A progressive tax will, in a great measure, effect this object, and that as a matter of interest to the parties most immediately concerned, as will be seen by the following table, which shows the nett produce upon every estate, after subtracting the tax. By this it will appear that after an estate exceeds thirteen or fourteen thousand a year the remainder produces but little profit to the holder, and consequently will pass either to the younger children or to other kindred.

TABLE III

Shewing the nett produce of every estate from one thousand to twenty-three thousand pounds a year:—

<i>No. of Thousands per Ann.</i>	<i>Total Tax Subtracted.</i>	<i>Nett Produce.</i>
£	£	£
1,000	21	979
2,000	59	1,941
3,000	109	2,891
4,000	184	3,816
5,000	284	4,716
6,000	434	5,566

<i>No. of Thousands per Ann.</i>	<i>Total Tax Subtracted.</i>	<i>Nett Produce.</i>
£	£	£
7,000	634	6,366
8,000	880	7,120
9,000	1,100	7,820
10,000	1,530	8,470
11,000	1,930	9,070
12,000	2,380	9,620
13,000	2,880	10,120
14,000	3,430	10,570
15,000	4,030	10,970
16,000	4,680	11,320
17,000	5,380	11,620
18,000	6,130	11,870
19,000	6,930	12,170
20,000	7,780	12,220
21,000	8,680	12,320
22,000	9,630	12,370
23,000	10,630	12,370

N.B.—The odd shillings are dropped in this table.

According to this table, an estate cannot produce more than £12,370 clear of the land tax and the progressive tax, and therefore the dividing such estates will follow as a matter of family interest. An estate of £23,000 a year, divided into five estates of four thousand each and one of three, will be charged only £1,129, which is but 5 per cent., but if held by one possessor will be charged £10,630.

Although an enquiry into the origin of those estates be unnecessary, the continuation of them in their present state is another subject. It is a matter of national concern. As hereditary estates, the law has created the evil, and it ought also to provide the remedy. Primogeniture ought to be abolished, not only because it is unnatural and unjust, but because the country suffers by its operation. By cutting off (as before observed) the younger children from their proper portion of inheritance the public is loaded with the expence of maintaining them; and the freedom of elections violated by the overbearing influence which this unjust monopoly of family property produces. Nor is this all. It occasions a waste of national property. A considerable part of the land of the country is rendered unproductive by the great extent of parks and chases which this law serves to keep up, and this at a time when the annual production of grain is not equal to the national consumption. In short, the evils of the aristocratical system are so great and numerous, so inconsistent with every-

thing that is just, wise, natural, and beneficent, that when they are considered, there ought not to be a doubt that many, who are now classed under that description, will wish to see such a system abolished.

What pleasure can they derive from contemplating the exposed condition and almost certain beggary of their younger offspring? Every aristocratical family has an appendage of family beggars hanging round it, which in a few ages or a few generations are shook off, and console themselves with telling their tale in almshouses, workhouses, and prisons. This is the natural consequence of Aristocracy. The peer and the beggar are often of the same family. One extreme produces the other; to make one rich many must be made poor; neither can the system be supported by other means.

There are two classes of people to whom the laws of England are particularly hostile, and those the most helpless: younger children and the poor. Of the former I have just spoken; of the latter I shall mention one instance out of the many that might be produced, and with which I shall close this subject.

Several laws are in existence for regulating and limiting workmen's wages. Why not leave them as free to make their own bargains as the law-makers are to let their farms and houses? Personal labour is all the property they have. Why is that little, and the little freedom they enjoy, to be infringed? But the injustice will appear stronger if we consider the operation and effect of such laws. When wages are fixed by what is called a law, the legal wages remain stationary, while everything else is in progression; and as those who make that law still continue to lay on new taxes by other laws, they increase the expence of living by one law and take away the means by another.

But if those gentlemen law-makers and tax-makers thought it right to limit the poor pittance which personal labour can produce, and on which a whole family is to be supported, they certainly must feel themselves happily indulged in a limitation on their own part of not less than twelve thousand a year, and that of property they never acquired (nor probably any of their ancestors), and of which they have made so ill a use.

Having now finished this subject, I shall bring the several particulars into one view, and then proceed to other matters.

The first Eight Articles are:

1. Abolition of two millions poor-rates.
2. Provision for two hundred and fifty-two thousand poor families at the rate of four pounds per head for each child under fourteen years of

age; which, with the addition of two hundred and fifty thousand pounds, provides also education for one million and thirty thousand children.

3. Annuity of six pounds per annum each for all poor persons, decayed tradesmen, or others (supposed seventy thousand) of the age of fifty years, and until sixty.

4. Annuity of ten pounds each for life for all poor persons, decayed tradesmen, and others (supposed seventy thousand), of the age of sixty years.

5. Donations of 20s. each for fifty thousand births.

6. Donations of 20s. each for twenty thousand marriages.

7. Allowance of twenty thousand pounds for the funeral expences of persons travelling for work, and dying at a distance from their friends.

8. Employment at all times for the casual poor in the cities of London and Westminster.

SECOND ENUMERATION

9. Abolition of the tax on houses and windows.

10. Allowance of 3s. per week for life to fifteen thousand disbanded soldiers, and a proportionable allowance to the officers of the disbanded corps.

11. Encrease of pay to the remaining soldiers of £19,500 annually.

12. The same allowance to the disbanded navy, and the same increase of pay as to the army.

13. Abolition of the commutation tax.

14. Plan of a progressive tax, operating to extirpate the unjust and unnatural law of primogeniture, and the vicious influence of the aristocratical system.

There yet remains, as already stated, one million of surplus taxes. Some part of this will be required for circumstances that do not immediately present themselves, and such part as shall not be wanted will admit a further reduction of taxes equal to that amount.

Among the claims that justice requires to be made, the condition of the inferior revenue officers will merit attention. It is a reproach to any Government to waste such an immensity of revenue in sinecures and nominal and unnecessary places and offices, and not allow even a decent livelihood to those on whom the labour falls. The salary of the inferior officers of the revenue has stood at the petty pittance of less than fifty pounds a year for upwards of one hundred years. It ought to be seventy. About one hundred and twenty thousand pounds applied to this purpose will put all those salaries in a decent condition.

This was proposed to be done almost twenty years ago, but the treasury board then in being startled at it, as it might lead to similar expectations from the army and navy; and the event was that the King, or somebody for him, applied to Parliament to have his own salary raised a hundred thousand a year, which being done, everything else was laid aside.

With respect to another class of men, the inferior clergy, I forbear to enlarge on their condition; but all partialities and prejudices for or against different modes and forms of religion aside, common justice will determine whether there ought to be an income of twenty or thirty pounds a year to one man and of ten thousand to another. I speak on this subject with the more freedom because I am known not to be a Presbyterian; and therefore the cant cry of court sycophants about Church and meeting, kept up to amuse and bewilder the Nation, cannot be raised against me.

Ye simple men, on both sides of the question, do ye not see through this courtly craft? If ye can be kept disputing and wrangling about Church and meeting, ye just answer the purpose of every courtier, who lives the while on the spoil of the taxes, and laughs at your credulity. Every religion is good that teaches man to be good; and I know of none that instructs him to be bad.

All the before-mentioned calculations, suppose only sixteen millions and a half of taxes paid into the exchequer, after the expence of collection and drawbacks at the custom house and excise office are deducted; whereas the sum paid into the exchequer, is very nearly, if not quite, seventeen millions. The taxes raised in Scotland and Ireland are expended in those countries, and therefore their savings will come out of their own taxes; but if any part be paid into the English exchequer it might be remitted. This will not make one hundred thousand pounds a year difference.

There now remains only the national debt to be considered. In the year 1789 the interest, exclusive of the tontine, was £9,150,138. How much the capital has been reduced since that time the minister best knows. But after paying the interest, abolishing the tax on houses and windows, the commutation tax, and the poor rates, and making all the provisions for the poor, for the education of children, the support of the aged, the disbanded part of the army and navy, and encreasing the pay of the remainder, there will be a surplus of one million.

The present scheme of paying off the national debt appears to me, speaking as an indifferent person, to be an ill-concerted, if not a fallacious job. The burden of the national debt consists not in its being so many

millions, or so many hundred millions, but in the quantity of taxes collected every year to pay the interest. If this quantity continue the same, the burden of the national debt is the same to all intents and purposes, be the capital more or less. The only knowledge which the public can have of the reduction of the debt, must be through the reduction of taxes for paying the interest. The debt, therefore, is not reduced one farthing to the public by all the millions that have been paid; and it would require more money now to purchase up the capital than when the scheme began.

Digressing for a moment at this point, to which I shall return again, I look back to the appointment of Mr. Pitt as minister.

I was then in America. The war was over; and though resentment had ceased, memory was still alive.

When the news of the coalition arrived, though it was a matter of no concern to me as a citizen of America, I felt it as a man. It had something in it which shocked, by publicly sporting with decency, if not with principle. It was impudence in Lord North; it was want of firmness in Mr. Fox.

Mr. Pitt was, at that time, what may be called a maiden character in politics. So far from being hackneyed, he appeared not to be initiated into the first mysteries of Court intrigue. Everything was in his favour. Resentment against the coalition served as friendship to him, and his ignorance of vice was credited for virtue. With the return of peace, commerce and prosperity would rise of itself; yet even this encrease was thrown to his account.

When he came to the helm the storm was over, and he had nothing to interrupt his course. It required even ingenuity to be wrong, and he succeeded. A little time shewed him the same sort of man as his predecessors had been. Instead of profiting by those errors which had accumulated a burden of taxes unparalleled in the world, he sought, I might almost say he advertised, for enemies, and provoked means to encrease taxation. Aiming at something, he knew not what, he ransacked Europe and India for adventures, and abandoning the fair pretensions he began with, became the knight-errant of modern times.

It is unpleasant to see character throw itself away. It is more so to see one's self deceived. Mr. Pitt had merited nothing, but he promised much. He gave symptoms of a mind superior to the meanness and corruption of Courts. His apparent candour encouraged expectations; and the public confidence, stunned, wearied, and confounded by a chaos of parties, revived and attached itself to him. But mistaking, as he has done,

the disgust of the Nation against the coalition, for merit in himself, he has rushed into measures which a man less supported would not have presumed to act.

All this seems to shew that change of ministers amounts to nothing. One goes out, another comes in, and still the same measures, vices, and extravagance are pursued. It signifies not who is minister. The defect lies in the system. The foundation and the superstructure of the Government are bad. Prop it as you please, it continually sinks into Court Government, and ever will.

I return, as I promised, to the subject of the national debt—that offspring of the Dutch-Anglo Revolution, and its handmaid the Hanover succession.

But it is now too late to enquire how it began. Those to whom it is due have advanced the money; and whether it was well or ill spent, or pocketed, is not their crime. It is, however, easy to see, that as the Nation proceeds in contemplating the nature and principles of Government, and to understand taxes, and make comparisons between those of America, France, and England, it will be next to impossible to keep it in the same torpid state it has hitherto been. Some reform must, from the necessity of the case, soon begin. It is not whether these principles press with little or much force in the present moment. They are out. They are abroad in the world, and no force can stop them. Like a secret told, they are beyond recall; and he must be blind indeed that does not see that a change is already beginning.

Nine million of dead taxes is a serious thing; and this not only for bad, but in a great measure for foreign Government. By putting the power of making war into the hands of foreigners who came for what they could get, little else was to be expected than what has happened.

Reasons are already advanced in this work shewing that whatever the reforms in the taxes may be, they ought to be made in the current expences of Government, and not in the part applied to the interest of the national debt. By remitting the taxes of the poor, *they* will be totally relieved, and all discontent on their part will be taken away; and by striking off such of the taxes as are already mentioned the Nation will more than recover the whole expence of the mad American War.

There will then remain only the national debt as a subject of discontent; and in order to remove, or rather to prevent this, it would be good policy in the stockholders themselves to consider it as property, subject, like all other property, to bear some portion of the taxes. It would give to it both popularity and security, and as a great part of its present incon-

venience is balanced by the capital which it keeps alive, a measure of this kind would so far add to that balance as to silence objections.

This may be done by such gradual means as to accomplish all that is necessary with the greatest ease and convenience.

Instead of taxing the capital the best method would be to tax the interest by some progressive ratio, and to lessen the public taxes in the same proportion as the interest diminished.

Suppose the interest was taxed one halfpenny in the pound the first year, a penny more the second, and to proceed by a certain ratio to be determined upon, always less than any other tax upon property. Such a tax would be subtracted from the interest at the time of payment without any expence of collection.

One halfpenny in the pound would lessen the interest, and consequently the taxes, twenty thousand pounds. The tax on waggons amounts to this sum, and this tax might be taken off the first year. The second year the tax on female servants, or some other of the like amount, might also be taken off, and by proceeding in this manner, always applying the tax raised from the property of the debt towards its extinction, and not carry it to the current services, it would liberate itself.

The stockholders, notwithstanding this tax, would pay less taxes than they do now. What they would save by the extinction of the poor-rates, and the tax on houses and windows, and the commutation tax, would be considerably greater than what this tax, slow but certain in its operation, amounts to.

It appears to me to be prudence to look out for measures that may apply under any circumstances that may approach. There is, at this moment, a crisis in the affairs of Europe that requires it. Preparation now is wisdom. If taxation be once let loose it will be difficult to reinstate it; neither would the relief be so effectual as to proceed by some certain and gradual reduction.

The fraud, hypocrisy, and imposition of Governments, are now beginning to be too well understood to promise them any long career. The farce of Monarchy and Aristocracy in all countries is following that of chivalry, and Mr. Burke is dressing for the funeral. Let it then pass quietly to the tomb of all other follies, and the mourners be comforted.

The time is not very distant when England will laugh at itself for sending to Holland, Hanover, Zell, or Brunswick, for men, at the expence of a million a year, who understood neither her laws, her language, nor her interest, and whose capacities would scarcely have fitted them for the office of a parish constable. If Government could be trusted to such hands,

it must be some easy and simple thing indeed, and materials fit for all the purposes may be found in every town and village in England.

When it shall be said in any country in the world my poor are happy; neither ignorance nor distress is to be found among them; my jails are empty of prisoners, my streets of beggars; the aged are not in want; the taxes are not oppressive; the rational world is my friend, because I am the friend of its happiness: When these things can be said, then may that country boast its Constitution and its Government.

Within the space of a few years we have seen two Revolutions, those of America and France. In the former the contest was long, and the conflict severe; in the latter the Nation acted with such a consolidated impulse, that, having no foreign enemy to contend with, the Revolution was complete in power the moment it appeared. From both those instances it is evident that the greatest forces than can be brought into the field of Revolutions are reason and common interest. Where these can have the opportunity of acting opposition dies with fear, or crumbles away by conviction. It is a great standing which they have now universally obtained; and we may hereafter hope to see Revolutions, or changes in Governments, produced with the same quiet operation, by which any measure, determinable by reason and discussion, is accomplished.

When a Nation changes its opinion and habits of thinking it is no longer to be governed as before; but it would not only be wrong, but bad policy, to attempt by force what ought to be accomplished by reason. Rebellion consists in forcibly opposing the general will of a Nation, whether by a party or by a Government. There ought, therefore, to be in every Nation a method of occasionally ascertaining the state of public opinion with respect to Government. On this point the old Government of France was superior to the present Government of England, because, on extraordinary occasions, recourse could be had to what was then called the States-General. But in England there are no such occasional bodies; and as to those who are now called representatives, a great part of them are mere machines of the Court, placemen, and dependents.

I presume that though all the people of England pay taxes, not an hundredth part of them are electors, and the members of one of the Houses of Parliament represent nobody but themselves. There is, therefore, no power but the voluntary will of the people that has a right to act in any matter respecting a general reform; and by the same right that two persons can confer on such a subject, a thousand may. The object in all such preliminary proceedings, is to find out what the general sense of a Nation is and to be governed by it. If it prefer a bad or defective Gov-

ernment to a reform, or chuse to pay ten times more taxes than there is occasion for, it has a right so to do: and so long as the majority do not impose conditions on the minority, different from what they impose on themselves, though there may be much error, there is no injustice. Neither will the error continue long. Reason and discussion will soon bring things right, however wrong they may begin. By such a process no tumult is to be apprehended. The poor in all countries are naturally both peaceable and grateful in all reforms in which their interest and happiness is included. It is only by neglecting and rejecting them that they become tumultuous.

The objects that now press on the public attention are the French Revolution, and the prospect of a general Revolution in Governments. Of all Nations in Europe there is none so much interested in the French Revolution as England. Enemies for ages, and that at a vast expence, and without any rational object, the opportunity now presents itself of amicably closing the scene, and joining their efforts to reform the rest of Europe. By doing this they will not only prevent the further effusion of blood and encrease of taxes, but be in a condition of getting rid of a considerable part of their present burdens, as has been already stated. Long experience, however, has shown that reforms of this kind are not those which old Governments wish to promote; and therefore it is to Nations, and not to such Governments, that these matters present themselves.

In the preceding part of this work I have spoken of an alliance between England, France and America, for purposes that were to be afterwards mentioned. Though I have no direct authority on the part of America I have good reason to conclude that she is disposed to enter into a consideration of such a measure, provided that the Governments with which she might ally acted as national Governments, and not as Courts enveloped in intrigue and mystery. That France as a Nation, and a national Government, would prefer an alliance with England, is a matter of certainty. Nations, like individuals, who have long been enemies without knowing each other, or knowing why, become the better friends when they discover the errors and impositions under which they had acted.

Admitting, therefore, the probability of such a connection, I will state some matters by which such an alliance, together with that of Holland, might render service, not only to the parties immediately concerned, but to all Europe.

It is, I think, certain, that if the fleets of England, France and Holland were confederated they could propose, with effect, a limitation to,

and a general dismantling of, all the navies in Europe, to a certain proportion to be agreed upon.

First, That no new ship of war shall be built by any power in Europe, themselves included.

Secondly, That all the navies now in existence shall be put back, suppose to one-tenth of their present force. This will save to France and England at least two millions sterling annually to each, and their relative force be in the same proportion as it is now. If men will permit themselves to think, as rational beings ought to think, nothing can appear more ridiculous and absurd, exclusive of all moral reflections, than to be at the expence of building navies, filling them with men, and then hauling them into the ocean, to try which can sink each other fastest. Peace, which costs nothing, is attended with infinitely more advantage than any victory with all its expence. But this, though it best answers the purpose of Nations, does not that of Court Governments, whose habited policy is pretence for taxation, places and offices.

It is, I think, also certain, that the above confederated powers, together with that of the United States of America, can propose with effect, to Spain, the independence of South America, and the opening those countries of immense extent and wealth to the general commerce of the world, as North America now is.

With how much more glory and advantage to itself does a Nation act when it exerts its powers to rescue the world from bondage and to create itself friends, than when it employs those powers to encrease ruin, desolation and misery. The horrid scene that is now acting by the English Government in the East Indies, is fit only to be told of Goths and Vandals, who, destitute of principle, robbed and tortured the world they were incapable of enjoying.

The opening of South America would produce an immense field of commerce, and a ready money market for manufactures, which the eastern world does not. The east is already a country full of manufactures, the importation of which is not only an injury to the manufactures of England, but a drain upon its specie. The balance against England by this trade is regularly upwards of half a million annually sent out in the East India ships in silver; and this is the reason, together with German intrigue and German subsidies, there is so little silver in England.

But any war is harvest to such Governments, however ruinous it may be to a nation. It serves to keep up deceitful expectations, which prevent a people looking into the defects and abuses of Government. It is the *lo here!* and the *lo there!* that amuses and cheats the multitude.

Never did so great an opportunity offer itself to England, and to all Europe, as is produced by the two Revolutions of America and France. By the former, freedom has a national champion in the western world; and by the latter, in Europe. When another Nation shall join France, despotism and bad Government will scarcely dare to appear. To use a trite expression, the iron is becoming hot all over Europe. The insulted German and the enslaved Spaniard, the Russ and the Pole, are beginning to think. The present age will hereafter merit to be called the Age of Reason, and the present generation will appear to the future as the Adam of a new world.

When all the Governments of Europe shall be established on the representative system, Nations will become acquainted, and the animosities and the prejudices fomented by the intrigue and artifice of Courts will cease. The oppressed soldier will become a freeman; and the tortured sailor, no longer dragged along the streets like a felon, will pursue his mercantile voyage in safety. It would be better that Nations should continue the pay of their soldiers during their lives, and give them their discharge, and restore them to freedom and their friends, and cease recruiting, than retain such multitudes at the same expence in a condition useless to society and themselves. As soldiers have hitherto been treated in most countries they might be said to be without a friend. Shunned by the citizens on an apprehension of being enemies to liberty, and too often insulted by those who commanded them, their condition was a double oppression. But where general principles of liberty pervade a people everything is restored to order; and the soldier, civilly treated, returns the civility.

In contemplating Revolutions, it is easy to perceive that they may arise from two distinct causes; the one, to avoid or get rid of some great calamity; the other, to obtain some great and positive good; and the two may be distinguished by the names of active and passive Revolutions. In those which proceed from the former cause, the temper becomes incensed and soured; and the redress, obtained by danger, is too often sullied by revenge. But in those which proceed from the latter, the heart, rather animated than agitated, enters serenely upon the subject. Reason and discussion, persuasion and conviction, become the weapons in the contest, and it is only when those are attempted to be suppressed that recourse is had to violence. When men unite in agreeing that a *thing is good*, could it be obtained, such as relief from a burden of taxes and the extinction of corruption, the object is more than half accomplished. What they approve as the end they will promote in the means.

Will any man say, in the present excess of taxation, falling so heavily

on the poor, that a remission of five pounds annually of taxes to one hundred and four thousand poor families is not a *good thing*? Will he say that a remission of seven pounds annually to one hundred thousand other poor families, of eight pounds annually to another hundred thousand poor families, and of ten pounds annually to fifty thousand poor and widowed families, are not *good things*? And to proceed a step farther in this climax, will he say that to provide against the misfortunes to which all human life is subject, by securing six pounds annually for all poor, distressed, and reduced persons of the age of fifty and until sixty, and of ten pounds annually after sixty, is not a *good thing*?

Will he say that an abolition of two million of poor-rates to the house-keepers, and of the whole of the house and window light tax, and of the commutation tax, is not a *good thing*? Or will he say that to abolish corruption is a *bad thing*?

If, therefore, the good to be obtained be worthy of a passive, rational, and costless Revolution, it would be bad policy to prefer waiting for a calamity that should force a violent one. I have no idea, considering the reforms which are now passing and spreading throughout Europe, that England will permit herself to be the last; and where the occasion and the opportunity quietly offer, it is better than to wait for a turbulent necessity. It may be considered as an honour to the animal faculties of man to obtain redress by courage and danger, but it is far greater honour to the rational faculties to accomplish the same object by reason, accommodation, and general consent.

As Reforms, or Revolutions, call them which you please, extend themselves among Nations, those Nations will form connections and conventions, and when a few are thus confederated, the progress will be rapid, till despotism and corrupt Government be totally expelled, at least out of two quarters of the world, Europe and America. The Algerine piracy may then be commanded to cease, for it is only by the malicious policy of old Governments, against each other, that it exists.

Throughout this work, various and numerous as the subjects are, which I have taken up and investigated, there is only a single paragraph upon religion, viz. "*that every religion is good, that teaches man to be good.*"

I have carefully avoided to enlarge upon the subject, because I am inclined to believe, that what is called the present Ministry wish to see contentions about religion kept up, to prevent the Nation turning its attention to subjects of Government. It is, as if they were to say, "*Look that way, or any way, but this.*"

But as religion is very improperly made a political machine, and the

reality of it is thereby destroyed, I will conclude this work with stating in what light religion appears to me.

If we suppose a large family of children, who, on any particular day, or particular circumstance, made it a custom to present to their parent some token of their affection and gratitude, each of them would make a different offering, and most probably in a different manner. Some would pay their congratulations in themes of verse or prose; some by little devices, as their genius dictated, or according to what they thought would please; and, perhaps the least of all, not able to do any of those things, would ramble into the garden, or the field, and gather what it thought the prettiest flower it could find, though perhaps it might be but a simple weed. The parent would be more gratified by such variety than if the whole of them had acted on a concerted plan, and each had made exactly the same offering. This would have the cold appearance of contrivance, or the harsh one of controul. But of all unwelcome things nothing could more afflict the parent than to know that the whole of them had afterwards gotten together by the ears, boys and girls fighting, scratching, reviling, and abusing each other about which was the best or the worst present.

Why may we not suppose that the great Father of all is pleased with variety of devotion? and that the greatest offence we can act is that by which we seek to torment and render each other miserable? For my own part I am fully satisfied that what I am now doing, with an endeavour to conciliate mankind, to render their condition happy, to unite Nations that have hitherto been enemies, and to extirpate the horrid practice of war, and break the chains of slavery and oppression, is acceptable in his sight; and being the best service I can perform I act it cheerfully.

I do not believe that any two men, on what are called doctrinal points, think alike, who think at all. It is only those who have not thought that appear to agree. It is in this case as with what is called the British Constitution. It has been taken for granted to be good, and encomiums have supplied the place of proof. But when the Nation comes to examine into its principles and the abuses it admits, it will be found to have more defects than I have pointed out in this work and the former.

As to what are called national religions, we may with as much propriety talk of national Gods. It is either political craft or the remains of the Pagan system, when every Nation had its separate and particular deity. Among all the writers of the English Church clergy, who have treated on the general subject of religion, the present Bishop of Llandaff has not been excelled: and it is with much pleasure that I take the opportunity of expressing this token of respect.

I have now gone through the whole of the subject, at least as far as it appears to me at present. It has been my intention for the five years I have been in Europe to offer an address to the people of England on the subject of Government, if the opportunity presented itself, before I returned to America. Mr. Burke has thrown it in my way and I thank him. On a certain occasion, three years ago, I pressed him to propose a national convention, to be fairly elected, for the purpose of taking the state of the Nation into consideration; but I found that however strongly the parliamentary current was then setting against the party he acted with, their policy was to keep everything within that field of corruption, and trust to accidents. Long experience had shewn that Parliaments would follow any change of ministers, and on this they rested their hopes and expectations.

Formerly, when divisions arose respecting Governments, recourse was had to the sword, and a civil war ensued. That savage custom is exploded by the new system; and reference is had to national conventions. Discussion and the general will arbitrate the question, and to this private opinion yields with a good grace, and order is preserved uninterrupted.

Some gentlemen have affected to call the principles upon which this work and the former part of the *Rights of Man* are founded "a new fangled doctrine." The question is not whether those principles are new or old, but whether they are right or wrong. Suppose the former, I will shew their effect by a figure easily understood.

It is now towards the middle of February. Were I to take a turn into the country the trees would present a leafless winterly appearance. As people are apt to pluck twigs as they walk along, I perhaps might do the same, and by chance might observe that a *single bud* on that twig had begun to swell. I should reason very unnaturally, or rather not reason at all, to suppose *this* was the *only* bud in England which had this appearance. Instead of deciding thus, I should instantly conclude that the same appearance was beginning, or about to begin, everywhere; and though the vegetable sleep will continue longer on some trees and plants than on others, and though some of them may not *blossom* for two or three years, all will be in leaf in the summer, except those which are *rotten*. What pace the political summer may keep with the natural, no human foresight can determine. It is, however, not difficult to perceive that the spring is begun. Thus wishing, as I sincerely do, freedom and happiness to all Nations, I close the SECOND PART.

APPENDIX

As THE publication of this work has been delayed beyond the time intended, I think it not improper, all circumstances considered, to state the causes that have occasioned the delay.

The reader will probably observe, that some parts in the plan contained in this work for reducing the taxes, and certain parts in Mr. Pitt's speech at the opening of the present session, Tuesday, January 31, are so much alike, as to induce a belief, that either the Author had taken the hint from Mr. Pitt, or Mr. Pitt from the Author.—I will first point out the parts that are similar, and then state such circumstances as I am acquainted with, leaving the reader to make his own conclusion.

Considering it almost an unprecedented case, that taxes should be proposed to be taken off, it is equally as extraordinary that such a measure should occur to two persons at the same time; and still more so (considering the vast variety and multiplicity of taxes), that they should hit on the same specific taxes. Mr. Pitt has mentioned, in his speech, the tax on *Carts and Waggons*—that on *Female Servants*—the lowering the tax on *Candles*, and the taking off the tax of three shillings on *Houses* having under seven windows.

Every one of those specific taxes are a part of the plan contained in this work, and proposed also to be taken off. Mr. Pitt's plan, it is true, goes no farther than to a reduction of three hundred and twenty thousand pounds; and the reduction proposed in this work to nearly six millions. I have made my calculations on only sixteen millions and a half of revenue, still asserting that it was "very nearly, if not quite, seventeen millions." Mr. Pitt states it at 16,690,000. I know enough of the matter to say, that he has not *over-stated* it. Having thus given the particulars, which correspond in this work and his speech, I will state a chain of circumstances that may lead to some explanation.

The first hint for lessening the taxes, and that as a consequence flowing from the French Revolution, is to be found in the ADDRESS and DECLARATION of the Gentlemen who met at the Thatched-House Tavern, August 20, 1791. Among many other particulars stated in that Address, is the following, put as an interrogation to the Government opposers of the French Revolution. "*Are they sorry that the pretence, for new oppressive taxes, and the occasion for continuing many old taxes will be at an end?*"

It is well known, that the persons who chiefly frequent the Thatched-House Tavern, are men of Court connections, and so much did they take this Address and Declaration respecting the French Revolution and the

reduction of taxes in disgust, that the Landlord was under the necessity of informing the Gentlemen, who composed the meeting of the twentieth of August, and who proposed holding another meeting, that he could not receive them.

What was only hinted at in the Address and Declaration, respecting taxes and principles of Government, will be found reduced to a regular system in this work. But as Mr. Pitt's speech contains some of the same things respecting taxes, I now come to give the circumstances before alluded to.

The case is: This work was intended to be published just before the meeting of Parliament, and for that purpose a considerable part of the copy was put into the printer's hands in September, and all the remaining copy, as far as page 273, which contains the parts to which Mr. Pitt's speech is similar, was given to him full six weeks before the meeting of Parliament, and he was informed of the time at which it was to appear. He had composed nearly the whole about a fortnight before the time of Parliament meeting, and had printed as far as page 241, and had given me a proof of the next sheet, up to page 251. It was then in sufficient forwardness to be out at the time proposed, as two other sheets were ready for striking off. I had before told him, that if he thought he should be straitened for time, I would get part of the work done at another press, which he desired me not to do. In this manner, the work stood on the Tuesday fortnight preceding the meeting of Parliament, when all at once, without any previous intimation, though I had been with him the evening before, he sent me, by one of his workmen, all the remaining copy, from page 241, declining to go on with the work *on any consideration*.

To account for this extraordinary conduct I was totally at a loss, as he stopped at the part where the arguments on systems and principles of Government closed, and where the plan for the reduction of taxes, the education of children, and the support of the poor and the aged begins; and still more especially, as he had, at the time of his beginning to print, and before he had seen the whole copy, offered a thousand pounds for the copy-right, together with the future copy-right of the former part of the Rights of Man. I told the person who brought me this offer that I should not accept it, and wished it not to be renewed, giving him as my reason, that though I believed the printer to be an honest man, I would never put it in the power of any printer or publisher to suppress or alter a work of mine, by making him master of the copy, or give to him the right of selling it to any minister, or to any other person, or to treat as a mere matter of traffic that which I intended should operate as a principle.

His refusal to complete the work (which he could not purchase) obliged me to seek for another printer, and this of consequence would throw the publication back till after the meeting of Parliament, otherways it would have appeared that Mr. Pitt had only taken up a part of the plan which I had more fully stated.

Whether that gentleman, or any other, had seen the work, or any part of it, is more than I have authority to say. But the manner in which the work was returned, and the particular time at which this was done, and that after the offers he had made, are suspicious circumstances. I know what the opinion of booksellers and publishers is upon such a case, but as to my own opinion, I chuse to make no declaration. There are many ways by which proof sheets may be procured by other persons before a work publicly appear; to which I shall add another circumstance, which is,

A ministerial bookseller in Piccadilly who had been employed, as common report says, by a clerk of one of the boards closely connected with the Ministry (the Board of Trade and Plantation of which Hawksbury is president) to publish what he calls my *Life* (I wish that his own life and the lives of all the Cabinet were as good), used to have his books printed at the same printing-office that I employed; but when the former part of *Rights of Man* came out, he took his work away in dudgeon; and about a week or ten days before the printer returned my copy, he came to make him an offer of his work again, which was accepted. This would consequently give him admission into the printing-office where the sheets of this work were then lying; and as booksellers and printers are free with each other, he would have the opportunity of seeing what was going on.—Be the case, however, as it may, Mr. Pitt's plan, little and diminutive as it is, would have had a very awkward appearance, had this work appeared at the time the printer had engaged to finish it.

I have now stated the particulars which occasioned the delay, from the proposal to purchase, to the refusal to print. If all the Gentlemen are innocent, it is very unfortunate for them that such a variety of suspicious circumstances should, without any design, arrange themselves together.

Having now finished this part, I will conclude with stating another circumstance.

About a fortnight or three weeks before the meeting of Parliament, a small addition, amounting to about twelve shillings and six pence a year, was made to the pay of the soldiers, or rather, their pay was docked so much less. Some Gentlemen who knew, in part, that this work would contain a plan of reforms respecting the oppressed condition of soldiers,

wished me to add a note to the work, signifying, that the part upon that subject had been in the printer's hands some weeks before that addition of pay was proposed. I declined doing this, lest it should be interpreted into an air of vanity, or an endeavour to excite suspicion (for which, perhaps, there might be no grounds) that some of the Government gentlemen, had, by some means or other, made out what this work would contain: and had not the printing been interrupted so as to occasion a delay beyond the time fixed for publication, nothing contained in this appendix would have appeared.

THOMAS PAINE.

❧ FOUR ❧

The Age of Reason

IN ORDER to understand the circumstances that produced *The Age of Reason*, we must know something of the events that led up to the writing of it. When Paine fled from England, he did not, for the time at least, abandon hope in the situation he left behind him. The revolution in England had failed, but the French Revolution was then in the first sweep of its young glory; France was the strongest, the most populous of the western European nations. A democratic France, united and firm in its stand against tyranny, could rally every revolutionary element in Europe: so thought Paine, and Paine also was certain the young American Republic across the sea would join hands firmly with France.

He landed in France at the port of Calais, and the people of Calais made him a deputy to the National Convention. At the Convention, he was one of the committee who framed the new French Constitution. But his day of glory in France was short lived. He tried to superimpose on France the pattern of the American Revolution. He fell in with the party of Condorcet, and he mistook their reactionary stand for an enlightened program; his lack of knowledge of the French language abetted his misunderstanding. He was growing old: change—yes, he still believed in change, but orderly change. He was against the execution of the king; in such a situation, his American comrades would not have executed the king. He could not clearly see the difference between a united, comparatively isolated America and a disunited France surrounded by enemies.

At the same time, his hope in a real working alliance between France and America began to fade. It is one of history's great trag-

edies that the anti-democratic Federalist movement of Hamilton and John Adams should have gained control of America's first two administrations, and in so doing destroyed our solid friendship with France. Blow after blow was now falling upon Paine. He lost his influence in the Convention. Revolutionary France moved ahead of him. Unlike others in the Condorcet faction, he never betrayed any interest of France—indeed, he was incapable of ever betraying the people's interest—but he found himself left behind, alone, in a sense forsaken. Gouverneur Morris, the Federalist minister to France, plotted against the French Republic, and Paine, in efforts to expose him, earned his undying enmity.

When Robespierre and his party came into power, Paine was almost ready to accept his exclusion from the revolutionary current. It came to him finally that he would not move Europe as he had moved America, that he could not rally the people of France behind him, as he had once rallied the American farmers and artisans. He retired to a farmhouse on the outskirts of Paris, and there he sat down to write the one book he considered might still have influence and importance.

In France, Paine had felt a trend toward atheism. So long had the established church been in league with the aristocracy, with all the forces of tyranny, that the reaction against it produced a reaction against every form of religion. To Paine, a deeply religious man, this was nothing less than a tragedy. Religion, he felt, could be as reasonable and as much a friend of society as any other social force.

So, in 1793, he wrote a book, setting down his religious beliefs, setting down a pattern of reasonable religion for all men. This book was called *The Age of Reason*. Hardly had Paine completed the manuscript, when Robespierre's agents came with orders for his arrest.

In this world, where reason is at such a premium, the unreasonable should not be hard to accept: that is the only premise upon which to understand how the author of so deeply religious a book as *The Age of Reason* was condemned as an atheist on the basis of that very book. Too many people accept without inquiring. Among

the common people of Great Britain, there were a comparatively few thousand who had read *Rights of Man*. Those knew Paine for their friend, for the friend of all mankind, for a good man and a hero. But many thousand more were fed the foul lies circulated by the anti-democrats about Paine, and those, who should have adored him, vilified him, becoming so much more the tools of their masters. Those people were ripe and ready to believe anything of Paine's new book; none of them read it,—*The Age of Reason* had not nearly as large a reading audience as Paine's previous work—but all of them accepted the statement that Paine had denounced and attempted to dethrone God. So it came about that in England, this great, good Englishman, was depicted with horns, was the butt of smutty sayings and foul rhymes, so readily do certain self-styled pious advocates turn to filth to enshrine their deity.

And in America, the reaction was even more bitter. The book appeared more than a decade after the revolution. The rising Federalist power attacked any and all patriots who would not play into the hands of the anti-democrats.

Of course, hardly anyone read it in America either; but since when has knowledge been a criterion for slander? You may ask, did they forget in so short a time? Paine's comrades never forgot, but they were so few! The country had grown, and even during the revolution, civil war had divided the nation. Paine had his enemies; he was a bad politician and not a man for compromise. He was attacked from the pulpit, on the streets, at meetings, in the newspapers and magazines—and this while he was still in France.

How was it that a book could be so completely misinterpreted? Well, for one thing, it presented a degree of opposition to the organized church; it called for complete and unequivocal freedom of religion and demanded that there be no middleman between a person and his God. It also criticized the Bible and the method whereby the Bible was interpreted. It was a deistic work, and it took the not-so-strange attitude that one serves God best who serves his fellow man. But anti-religious it was not, and certainly not atheistic.

The crux of the matter was this; at that time, atheism was not nearly the menace to the established church that deism was. Athe-

ism has very little appeal to a church-raised man; deism has a great deal more. *Reason* was the main overtone of all eighteenth century revolutionary movements, and the ideological appeal was to the natural rights of all men. If all men were created equal in the sight of the natural laws of man, then could it not be that they were also created equal in the sight of God? And could it not be that God would judge them solely by their social behavior and not by their churchly demeanor? That was like a knife-edge cutting at the church, and combined with the humanistic theories of the goodness of man, taking hold at the time, it presented no inconsiderable menace to organized religion. Remember that then the "fundamentalist" quality in the church was far more powerful than today.

Undoubtedly, Paine's prime motive in writing *The Age of Reason* was to give the opponents of atheism firm ground on which to stand. From his point of view, love of one's fellow man and love of God were incontestably one. If the broad revolutionary movement, with which he had so closely identified himself, abandoned God, then would it not abandon man? Yet he could make out no case for the God of organized religion; he had to find a new conception of God, a broad and wise conception wherein there was only wisdom and love—and that God, as Paine saw it, was as broad as all things and all hope. That is the God he wrote about in his book; and whether he was right or wrong, the sincerity of his viewpoint must be recognized. The bugaboo that he was an atheist should be laid to rest, once and for all.

Paine finished *The Age of Reason* only in time to pass it on to a friend before he was marched off to jail by order of Robespierre. For long and weary months, Paine languished in prison, watching the long parade of victims go to their deaths under the Terror. Again and again, he suspected that he would be next—but the government fell and Paine still lived. Then, through the intercession of James Monroe, the new ambassador to France, Paine was released, a tired and sick old man.

The Age of Reason

BEING AN INVESTIGATION OF TRUE AND FABULOUS THEOLOGY

IT HAS been my intention, for several years past, to publish my thoughts upon religion; I am well aware of the difficulties that attend the subject, and, from that consideration, had reserved it to a more advanced period of life. I intended it to be the last offering I should make to my fellow citizens of all nations, and that at a time when the purity of the motive that induced me to it, could not admit of a question, even by those who might disapprove the work.

The circumstance that has now taken place in France of the total abolition of the whole national order of priesthood, and of every thing appertaining to compulsive systems of religion, and compulsive articles of faith, has not only precipitated my intention, but rendered a work of this kind exceedingly necessary, lest, in the general wreck of superstition, of false systems of government, and false theology, we lose sight of morality, of humanity, and of the theology that is true.

As several of my colleagues, and others of my fellow-citizens of France, have given me the example of making their voluntary and individual profession of faith, I also will make mine; and I do this with all that sincerity and frankness with which the mind of man communicates with itself.

I believe in one God, and no more; and I hope for happiness beyond this life.

I believe the equality of man; and I believe that religious duties consist in doing justice, loving mercy, and endeavouring to make our fellow creatures happy.

But, lest it should be supposed that I believe many other things in addition to these, I shall, in the progress of this work, declare the things I do not believe, and my reasons for not believing them.

I do not believe in the creed professed by the Jewish church, by the Roman church, by the Greek church, by the Turkish church, by the Protestant church, nor by any church that I know of. My own mind is my own church.

All national institutions of churches, whether Jewish, Christian, or Turkish, appear to me no other than human inventions, set up to terrify and enslave mankind, and monopolize power and profit.

I do not mean by this declaration to condemn those who believe otherwise; they have the same right to their belief as I have to mine. But it is

necessary to the happiness of man, that he be mentally faithful to himself. Infidelity does not consist in believing, or in disbelieving; it consists in professing to believe what he does not believe.

It is impossible to calculate the moral mischief, if I may so express it, that mental lying has produced in society. When a man has so far corrupted and prostituted the chastity of his mind, as to subscribe his professional belief to things he does not believe, he has prepared himself for the commission of every other crime. He takes up the trade of a priest for the sake of gain, and, in order to qualify himself for that trade, he begins with a perjury. Can we conceive any thing more destructive to morality than this?

Soon after I had published the pamphlet, "COMMON SENSE," in America, I saw the exceeding probability that a revolution in the system of government would be followed by a revolution in the system of religion. The adulterous connection of church and state, wherever it had taken place, whether Jewish, Christian, or Turkish, had so effectually prohibited, by pains and penalties, every discussion upon established creeds, and upon first principles of religion, that until the system of government should be changed, those subjects could not be brought fairly and openly before the world, but that whenever this should be done, a revolution in the system of religion would follow. Human inventions and priest-craft would be detected; and man would return to the pure, unmixed, and unadulterated belief of one God, and no more.

Every national church or religion has established itself by pretending some special mission from God, communicated to certain individuals. The Jews have their Moses; the Christians their Jesus Christ, their apostles, and saints; and the Turks their Mahomet, as if the way to God was not open to every man alike.

Each of those churches show certain books, which they call *revelation*, or the word of God. The Jews say, that their word of God was given by God to Moses, face to face; the Christians say, that their word of God came by divine inspiration; and the Turks say, that their word of God (the Koran) was brought by an angel from Heaven. Each of those churches accuse the other of unbelief; and, for my own part, I disbelieve them all.

As it is necessary to affix right ideas to words, I will, before I proceed further into the subject, offer some other observations on the word *revelation*. Revelation when applied to religion, means something communicated *immediately* from God to man.

No one will deny or dispute the power of the Almighty to make such

a communication, if he pleases. But admitting, for the sake of a case, that something has been revealed to a certain person, and not revealed to any other person, it is revelation to that person only. When he tells it to a second person, a second to a third, a third to a fourth, and so on, it ceases to be a revelation to all those persons. It is revelation to the first person only, and *hearsay* to every other, and, consequently, they are not obliged to believe it.

It is a contradiction in terms and ideas, to call any thing a revelation that comes to us at second-hand, either verbally or in writing. Revelation is necessarily limited to the first communication—after this, it is only an account of something which that person says was a revelation made to him; and though he may find himself obliged to believe it, it cannot be incumbent on me to believe it in the same manner; for it was not a revelation made to *me*, and I have only his word for it that it was made to him.

When Moses told the children of Israel that he received the two tables of the commandments from the hands of God, they were not obliged to believe him, because they had no other authority for it than his telling them so; and I have no other authority for it than some historian telling me so. The commandments carry no internal evidence of divinity with them; they contain some good moral precepts, such as any man qualified to be a lawgiver, or a legislator, could produce himself, without having recourse to supernatural intervention.

When I am told that the Koran was written in Heaven, and brought to Mahomet by an angel, the account comes too near the same kind of hearsay evidence and second-hand authority as the former. I did not see the angel myself, and, therefore, I have a right not to believe it.

When also I am told that a woman called the Virgin Mary, said, or gave out, that she was with child without any cohabitation with a man, and that her betrothed husband, Joseph, said that an angel told him so, I have a right to believe them or not; such a circumstance required a much stronger evidence than their bare word for it; but we have not even this—for neither Joseph nor Mary wrote any such matter themselves; it is only reported by others that *they said so*—it is hearsay upon hearsay, and I do not choose to rest my belief upon such evidence.

It is, however, not difficult to account for the credit that was given to the story of Jesus Christ being the son of God. He was born when the heathen mythology had still some fashion and repute in the world, and that mythology had prepared the people for the belief of such a story. Almost all the extraordinary men that lived under the heathen mythology were reputed to be the sons of some of their gods. It was not a new thing,

at that time, to believe a man to have been celestially begotten; the intercourse of gods with women was then a matter of familiar opinion. Their Jupiter, according to their accounts, had cohabited with hundreds; the story therefore had nothing in it either new, wonderful or obscene; it was conformable to the opinions that then prevailed among the people called Gentiles, or Mythologists, and it was those people only that believed it. The Jews, who had kept strictly to the belief of one God, and no more, and who had always rejected the heathen mythology, never credited the story.

It is curious to observe how the theory of what is called the Christian Church, sprung out of the tail of heathen mythology. A direct incorporation took place in the first instance, by making the reputed founder to be celestially begotten. The trinity of gods that then followed was no other than a reduction of the former plurality, which was about twenty or thirty thousand; the statue of Mary succeeded the statue of Diana of Ephesus; the deification of heroes changed into the canonization of saints; the mythologists had gods for every thing; the Christian Mythologists had saints for every thing; the church became as crowded with the one, as the pantheon had been with the other; and Rome was the place of both. The Christian theory is little else than the idolatry of the ancient Mythologists, accommodated to the purposes of power and revenue; and it yet remains to reason and philosophy to abolish the amphibious fraud.

Nothing that is here said can apply, even with the most distant disrespect, to the *real* character of Jesus Christ. He was a virtuous and an amiable man. The morality that he preached and practised was of the most benevolent kind; and though similar systems of morality had been preached by Confucius, and by some of the Greek philosophers, many years before; by the Quakers since; and by many good men in all ages, it has not been exceeded by any.

Jesus Christ wrote no account of himself, of his birth, parentage, or anything else; not a line of what is called the New Testament is of his own writing. The history of him is altogether the work of other people; and as to the account given of his resurrection and ascension, it was the necessary counterpart to the story of his birth. His historians, having brought him into the world in a supernatural manner, were obliged to take him out again in the same manner, or the first part of the story must have fallen to the ground.

The wretched contrivance with which this latter part is told, exceeds every thing that went before it. The first part, that of the miraculous conception, was not a thing that admitted of publicity; and therefore the tell-

ers of this part of the story had this advantage, that though they might not be credited, they could not be detected. They could not be expected to prove it, because it was not one of those things that admitted of proof, and it was impossible that the person of whom it was told could prove it himself.

But the resurrection of a dead person from the grave, and his ascension through the air, is a thing very different as to the evidence it admits of, to the invisible conception of a child in the womb. The resurrection and ascension, supposing them to have taken place, admitted of public and ocular demonstration, like that of the ascension of a balloon, or the sun at noon day, to all Jerusalem at least. A thing which every body is required to believe, requires that the proof and evidence of it should be equal to all, and universal; and as the public visibility of this last related act, was the only evidence that could give sanction to the former part, the whole of it falls to the ground, because that evidence never was given. Instead of this, a small number of persons, not more than eight or nine, are introduced as proxies for the whole world, to say they saw it, and all the rest of the world are called upon to believe it. But it appears that Thomas did not believe the resurrection; and, as they say, would not believe without having ocular and manual demonstration himself. *So neither will I*, and the reason is equally as good for me, and for every other person, as for Thomas.

It is in vain to attempt to palliate or disguise this matter. The story, so far as relates to the supernatural part, has every mark of fraud and imposition stamped upon the face of it. Who were the authors of it is as impossible for us now to know, as it is for us to be assured, that the books in which the account is related, were written by the persons whose names they bear; the best surviving evidence we now have respecting this affair is the Jews. They are regularly descended from the people who lived in the time this resurrection and ascension is said to have happened, and they say, *it is not true*. It has long appeared to me a strange inconsistency to cite the Jews as a proof of the truth of the story. It is just the same as if a man were to say, I will prove the truth of what I have told you, by producing the people who say it is false.

That such a person as Jesus Christ existed, and that he was crucified, which was the mode of execution at that day, are historical relations strictly within the limits of probability. He preached most excellent morality, and the equality of man; but he preached also against the corruptions and avarice of the Jewish priests, and this brought upon him the hatred and vengeance of the whole order of priesthood. The accusation

which those priests brought against him was that of sedition and conspiracy against the Roman government, to which the Jews were then subject and tributary; and it is not improbable that the Roman government might have some secret apprehensions of the effects of his doctrine as well as the Jewish priests; neither is it improbable that Jesus Christ had in contemplation the delivery of the Jewish nation from the bondage of the Romans. Between the two, however, this virtuous reformer and revolutionist lost his life.

It is upon this plain narrative of facts, together with another case I am going to mention, that the Christian Mythologists, calling themselves the Christian Church, have erected their fable, which for absurdity and extravagance, is not exceeded by any thing that is to be found in the mythology of the ancients.

The ancient Mythologists tell us that the race of Giants made war against Jupiter, and that one of them threw a hundred rocks against him at one throw; that Jupiter defeated him with thunder, and confined him afterwards under Mount Etna, and that every time the Giant turns himself, Mount Etna belches fire.

It is here easy to see that the circumstance of the mountain, that of its being a volcano, suggested the idea of the fable; and that the fable is made to fit and wind itself up with that circumstance.

The Christian Mythologists tell us, that their Satan made war against the Almighty, who defeated him, and confined him afterwards, not under a mountain, but in a pit. It is here easy to see that the first fable suggested the idea of the second; for the fable of Jupiter and the Giants was told many hundred years before that of Satan.

Thus far the ancient and the christian Mythologists differ very little from each other. But the latter have contrived to carry the matter much farther. They have contrived to connect the fabulous part of the story of Jesus Christ with the fable originating from Mount Etna; and, in order to make all the parts of the story tie together, they have taken to their aid the traditions of the Jews; for the Christian mythology is made up partly from the ancient mythology, and partly from the Jewish traditions.

The Christian Mythologists, after having confined Satan in a pit, were obliged to let him out again to bring on the sequel of the fable. He is then introduced into the Garden of Eden in the shape of a snake or a serpent, and in that shape he enters into familiar conversation with Eve, who is no way surprised to hear a snake talk; and the issue of this *tete-a-tete* is, that he persuades her to eat an apple, and the eating of that apple damns all mankind.

After giving Satan this triumph over the whole creation, one would have supposed that the church Mythologists would have been kind enough to send him back to the pit: or, if they had not done this, that they would have put a mountain upon him, (for they say that their faith can remove a mountain) or have put him *under* a mountain, as the former Mythologists had done, to prevent his getting again among the women and doing more mischief. But instead of this, they leave him at large, without even obliging him to give his parole—the secret of which is, that they could not do without him; and after being at the trouble of making him, they bribed him to stay. They promised him ALL the Jews, ALL the Turks by anticipation, nine-tenths of the world beside, and Mahomet into the bargain. After this, who can doubt the bountifulness of the Christian mythology.

Having thus made an insurrection and a battle in Heaven, in which none of the combatants could be either killed or wounded—put Satan into the pit—let him out again—given him a triumph over the whole creation—damned all mankind by the eating of an apple, these Christian Mythologists bring the two ends of their fable together. They represent this virtuous and amiable man, Jesus Christ, to be at once both God and Man, and also the Son of God, celestially begotten, on purpose to be sacrificed, because they say that Eve in her longing had eaten an apple.

Putting aside every thing that might excite laughter by its absurdity, or detestation by its profaneness, and confining ourselves merely to an examination of the parts, it is impossible to conceive a story more derogatory to the Almighty, more inconsistent with his wisdom, more contradictory to his power, than this story is.

In order to make for it a foundation to rise upon, the inventors were under the necessity of giving to the being, whom they call Satan, a power equally as great, if not greater than they attribute to the Almighty. They have not only given him the power of liberating himself from the pit, after what they call his fall, but they have made that power increase afterwards to infinity. Before this fall they represent him only as an angel of limited existence, as they represent the rest. After his fall, he becomes, by their account, omnipresent. He exists everywhere, and at the same time. He occupies the whole immensity of space.

Not content with this deification of Satan, they represent him as defeating, by stratagem, in the shape of an animal of the creation, all the power and wisdom of the Almighty. They represent him as having compelled the Almighty to the *direct necessity* either of surrendering the whole of the creation to the government and sovereignty of this Satan,

or of capitulating for its redemption by coming down upon earth, and exhibiting himself upon a cross in the shape of a man.

Had the inventors of this story told it the contrary way, that is, had they represented the Almighty as compelling Satan to exhibit *himself* on a cross, in the shape of a snake, as a punishment for his new transgression, the story would have been less absurd—less contradictory. But, instead of this, they make the transgressor triumph, and the Almighty fall.

That many good men have believed this strange fable, and lived very good lives under that belief (for credulity is not a crime) is what I have no doubt of. In the first place, they were educated to believe it, and they would have believed any thing else in the same manner. There are also many who have been so enthusiastically enraptured by what they conceived to be the infinite love of God to man, in making a sacrifice of himself, that the vehemence of the idea has forbidden and deterred them from examining into the absurdity and profaneness of the story. The more unnatural any thing is, the more is it capable of becoming the object of dismal admiration.

But if objects for gratitude and admiration are our desire, do they not present themselves every hour to our eyes? Do we not see a fair creation prepared to receive us the instant we are born—a world furnished to our hands, that cost us nothing? Is it we that light up the sun, that pour down the rain, and fill the earth with abundance? Whether we sleep or wake, the vast machinery of the universe still goes on. Are these things, and the blessings they indicate in future, nothing to us? Can our gross feelings be excited by no other subjects than tragedy and suicide? Or is the gloomy pride of man become so intolerable, that nothing can flatter it but a sacrifice of the Creator?

I know that this bold investigation will alarm many, but it would be paying too great a compliment to their credulity to forbear it upon that account; the times and the subject demand it to be done. The suspicion that the theory of what is called the Christian church is fabulous, is becoming very extensive in all countries; and it will be a consolation to men staggering under that suspicion, and doubting what to believe and what to disbelieve, to see the subject freely investigated. I therefore pass on to an examination of the books called the Old and New Testament.

These books, beginning with Genesis and ending with Revelation, (which, by the bye, is a book of riddles that requires a revelation to explain it) are, we are told, the word of God. It is, therefore, proper for us to know who told us so, that we may know what credit to give to the re-

port. The answer to this question is, that nobody can tell, except that we tell one another so. The case, however, historically appears to be as follows:—

When the church Mythologists established their system, they collected all the writings they could find, and managed them as they pleased. It is a matter altogether of uncertainty to us whether such of the writings as now appear under the name of the Old and New Testament, are in the same state in which those collectors say they found them, or whether they added, altered, abridged, or dressed them up.

Be this as it may, they decided by *vote* which of the books out of the collection they had made, should be the WORD OF GOD, and which should not. They rejected several; they voted others to be doubtful, such as the books called the Apocrypha; and those books which had a majority of votes, were voted to be the word of God. Had they voted otherwise, all the people, since calling themselves Christians, had believed otherwise—for the belief of the one comes from the vote of the other. Who the people were that did all this, we know nothing of, they called themselves by the general name of the Church; and this is all we know of the matter.

As we have no other external evidence or authority for believing these books to be the word of God, than what I have mentioned, which is no evidence or authority at all, I come, in the next place, to examine the internal evidence contained in the books themselves.

In the former part of this Essay, I have spoken of revelation.—I now proceed further with that subject, for the purpose of applying it to the books in question.

Revelation is a communication of something, which the person, to whom that thing is revealed, did not know before. For if I have done a thing, or seen it done, it needs no revelation to tell me I have done it, or seen it, nor to enable me to tell it, or to write it.

Revelation, therefore, cannot be applied to any thing done upon earth, of which man is himself the actor or the witness; and consequently all the historical and anecdotal part of the Bible, which is almost the whole of it, is not within the meaning and compass of the word revelation, and, therefore, is not the word of God.

When Sampson ran off with the gate-posts of Gaza, if he ever did so, (and whether he did or not is nothing to us,) or when he visited his Delilah, or caught his foxes, or did any thing else, what has revelation to do with these things? If they were facts, he could tell them himself; or his secretary, if he kept one, could write them, if they were worth either telling or writing; and if they were fictitious, revelation could not make them

true; and whether true or not, we are neither the better nor the wiser for knowing them. When we contemplate the immensity of that Being, who directs and governs the incomprehensible WHOLE, of which the utmost ken of human sight can discover but a part, we ought to feel shame at calling such paltry stories the word of God.

As to the account of the Creation, with which the book of Genesis opens, it has all the appearance of being a tradition which the Israelites had among them before they came into Egypt; and after their departure from that country, they put it at the head of their history, without telling (as it is most probable) that they did not know how they came by it. The manner in which the account opens, shows it to be traditionary. It begins abruptly: it is nobody that speaks; it is nobody that hears; it is addressed to nobody; it has neither first, second, or third person; it has every criterion of being a tradition, it has no voucher. Moses does not take it upon himself by introducing it with the formality that he uses on other occasions, such as that of saying, *The Lord spake unto Moses, saying.*

Why it has been called the Mosaic account of the Creation, I am at a loss to conceive. Moses, I believe, was too good a judge of such subjects to put his name to that account. He had been educated among the Egyptians, who were a people as well skilled in science, and particularly in astronomy, as any people of their day; and the silence and caution that Moses observes in not authenticating the account, is a good negative evidence that he neither told it nor believed it.—The case is, that every nation of people has been world-makers, and the Israelites had as much right to set up the trade of world-making as any of the rest; and as Moses was not an Israelite, he might not choose to contradict the tradition. The account, however, is harmless; and this is more than can be said of many other parts of the Bible.

Whenever we read the obscene stories, the voluptuous debaucheries, the cruel and torturous executions, the unrelenting vindictiveness, with which more than half the Bible is filled, it would be more consistent that we called it the word of a demon, than the word of God. It is a history of wickedness, that has served to corrupt and brutalize mankind; and, for my own part, I sincerely detest it, as I detest every thing that is cruel.

We scarcely meet with any thing, a few phrases excepted, but what deserves either our abhorrence or our contempt, till we come to the miscellaneous parts of the Bible. In the anonymous publications, the Psalms, and the Book of Job, more particularly in the latter, we find a great deal of elevated sentiment reverentially expressed of the power and benignity

of the Almighty; but they stand on no higher rank than many other compositions on similar subjects, as well before that time as since.

The Proverbs which are said to be Solomon's, though most probably a collection, (because they discover a knowledge of life, which his situation excluded him from knowing) are an instructive table of ethics. They are inferior in keenness to the proverbs of the Spaniards, and not more wise and economical than those of the American Franklin.

All the remaining parts of the Bible, generally known by the name of the Prophets, are the works of the Jewish poets and itinerant preachers, who mixed poetry, anecdote, and devotion together—and those works still retain the air and style of poetry, though in translation.*

There is not, throughout the whole book called the Bible, any word that describes to us what we call a poet, nor any word that describes what we call poetry. The case is, that the word *prophet*, to which latter times have affixed a new idea, was the Bible word for poet, and the word *prophesying* meant the art of making poetry. It also meant the art of playing poetry to a tune upon any instrument of music.

We read of prophesying with pipes, tabrets, and horns—of prophesying with harps, with psalteries, with cymbals, and with every other instru-

* As there are many readers who do not see that a composition is poetry, unless it be in rhyme, it is for their information that I add this note.

Poetry consists principally in two things—imagery and composition. The composition of poetry differs from that of prose in the manner of mixing long and short syllables together. Take a long syllable out of a line of poetry, and put a short one in the room of it, or put a long syllable where a short one should be, and that line will lose its poetical harmony. It will have an effect upon the line like that of misplacing a note in a song.

The imagery in those books, called the prophets, appertains altogether to poetry. It is fictitious, and often extravagant, and not admissible in any other kind of writing than poetry.

To show that these writings are composed in poetical numbers, I will take ten syllables, as they stand in the book, and make a line of the same number of syllables (heroic measure) that shall rhyme with the last word. It will then be seen that the composition of those books is poetical measure. The instance I shall produce is from Isaiah:—

*"Hear, O ye heavens, and give ear, O earth!"
Tis God himself that calls attention forth.*

Another instance I shall quote is from the mournful Jeremiah, to which I shall add two other lines, for the purpose of carrying out the figure, and showing the intention of the poet.

*"O! that mine head were waters and mine eyes"
Were fountains flowing like the liquid skies;
Then would I give the mighty flood release,
And weep a deluge for the human race.*

ment of music then in fashion. Were we now to speak of prophesying with a fiddle, or with a pipe and tabor, the expression would have no meaning, or would appear ridiculous and to some people contemptuous, because we have changed the meaning of the word.

We are told of Saul being among the *prophets*, and also that he prophesied; but we are not told what *they prophesied*, nor what *he prophesied*. The case is, there was nothing to tell; for these prophets were a company of musicians and poets, and Saul joined in the concert, and this was called *prophesying*.

The account given of this affair in the book called Samuel, is, that Saul met a *company* of prophets; a whole company of them! coming down with a psaltery, a tabret, a pipe, and a harp, and that they prophesied, and that he prophesied with them. But it appears afterwards, that Saul prophesied badly; that is, performed his part badly; for it is said, that, an "*evil spirit from God*" * came upon Saul, and he prophesied.

Now, were there no other passage in the book called the Bible, than this, to demonstrate to us that we have lost the original meaning of the word *prophecy*, and substituted another meaning in its place, this alone would be sufficient; for it is impossible to use and apply the word *prophecy*, in the place it is here used and applied, if we give to it the sense which latter times have affixed to it. The manner in which it is here used strips it of all religious meaning, and shows that a man might then be a prophet, or he might *prophecy*, as he may now be a poet or musician, without any regard to the morality or immorality of his character. The word was originally a term of science, promiscuously applied to poetry and to music, and not restricted to any subject upon which poetry and music might be exercised.

Deborah and Barak are called prophets, not because they predicted any thing, but because they composed the poem or song that bears their name, in celebration of an act already done. David is ranked among the prophets, for he was a musician, and was also reputed to be (though perhaps very erroneously) the author of the Psalms. But Abraham, Isaac, and Jacob are not called prophets; it does not appear from any accounts we have, that they could either sing, play music, or make poetry.

We are told of the greater and the lesser prophets. They might as well tell us of the greater and the lesser God; for there cannot be degrees in

* As those men who call themselves divines and commentators, are very fond of puzzling one another, I leave them to contest the meaning of the first part of the phrase, that of an *evil spirit of God*. I keep to my text—I keep to the meaning of the word *prophecy*.

prophesying consistently with its modern sense.—But there are degrees in poetry, and therefore the phrase is reconcilable to the case, when we understand by it the greater and the lesser poets.

It is altogether unnecessary, after this, to offer any observations upon what those men, styled prophets, have written. The axe goes at once to the root, by showing that the original meaning of the word has been mistaken, and consequently all the inferences that have been drawn from those books, the devotional respect that has been paid to them, and the laboured commentaries that have been written upon them, under that mistaken meaning, are not worth disputing about. In many things, however, the writings of the Jewish poets deserve a better fate than that of being bound up, as they now are, with the trash that accompanies them, under the abused name of the word of God.

If we permit ourselves to conceive right ideas of things, we must necessarily affix the idea, not only of unchangeableness, but of the utter impossibility of any change taking place, by any means or accident whatever, in that which we would honour with the name of the word of God; and therefore the word of God cannot exist in any written or human language.

The continually progressive change to which the meaning of words is subject, the want of an universal language which renders translation necessary, the errors to which translations are again subject, the mistakes of copyists and printers, together with the possibility of wilful alteration, are of themselves evidences that the human language, whether in speech or in print, cannot be the vehicle of the word of God. The word of God exists in something else.

Did the book, called the Bible, excel in purity of ideas and expression all the books now extant in the world, I would not take it for my rule of faith, as being the word of God, because the possibility would nevertheless exist of my being imposed upon. But when I see throughout the greatest part of this book, scarcely any thing but a history of the grossest vices, and a collection of the most paltry and contemptible tales, I cannot dishonor my Creator by calling it by his name.

Thus much for the Bible; I now go on to the book called the New Testament. The *New Testament*! that is, the *new* will, as if there could be two wills of the Creator.

Had it been the object or the intention of Jesus Christ to establish a new religion, he would undoubtedly have written the system himself, or *procured it to be written* in his life time. But there is no publication extant authenticated with his name. All the books called the New Testa-

ment were written after his death. He was a Jew by birth and by profession; and he was the son of God in like manner that every other person is—for the Creator is the Father of All.

The first four books, called Matthew, Mark, Luke, and John, do not give a history of the life of Jesus Christ, but only detached anecdotes of him. It appears from these books, that the whole time of his being a preacher was not more than eighteen months; and it was only during this short time, that those men became acquainted with him. They make mention of him at the age of twelve years, sitting, they say, among the Jewish doctors, asking and answering them questions. As this was several years before their acquaintance with him began, it is most probable they had this anecdote from his parents. From this time there is no account of him for about sixteen years. Where he lived, or how he employed himself during this interval, is not known. Most probably he was working at his father's trade, which was that of a carpenter. It does not appear that he had any school education, and the probability is, that he could not write, for his parents were extremely poor, as appears from their not being able to pay for a bed when he was born.

It is somewhat curious that the three persons whose names are the most universally recorded, were of very obscure parentage. Moses was a foundling; Jesus Christ was born in a stable; and Mahomet was a mule driver. The first and the last of these men were founders of different systems of religion; but Jesus Christ founded no new system. He called men to the practice of moral virtues, and the belief of one God. The great trait in his character is philanthropy.

The manner in which he was apprehended, shows that he was not much known at that time; and it shows also, that the meetings he then held with his followers were in secret; and that he had given over or suspended preaching publicly. Judas could no otherwise betray him than by giving information where he was, and pointing him out to the officers that went to arrest him; and the reason for employing and paying Judas to do this could arise only from the cause already mentioned, that of his not being much known, and living concealed.

The idea of his concealment, not only agrees very ill with his reputed divinity, but associates with it something of pusillanimity; and his being betrayed, or in other words, his being apprehended, on the information of one of his followers, shows that he did not intend to be apprehended, and consequently that he did not intend to be crucified.

The Christian Mythologists tell us, that Christ died for the sins of the world, and that he came on *purpose to die*. Would it not then have been

the same if he had died of a fever, or of the small pox, of old age, or of any thing else?

The declaratory sentence which, they say, was passed upon Adam, in case he eat of the apple, was not, that *thou shalt surely be crucified, but, thou shalt surely die*—the sentence of death, and not the manner of dying. Crucifixion, therefore, or any other particular manner of dying, made no part of the sentence that Adam was to suffer, and consequently, even upon their own tactics, it could make no part of the sentence that Christ was to suffer in the room of Adam. A fever would have done as well as a cross, if there was any occasion for either.

The sentence of death, which they tell us, was thus passed upon Adam, must either have meant dying naturally, that is, ceasing to live, or have meant what these Mythologists call damnation; and consequently, the act of dying on the part of Jesus Christ, must according to their system, apply as a prevention to one or other of these two *things* happening to Adam and to us.

That it does not prevent our dying is evident, because we all die; and if their accounts of longevity be true, men die faster since the crucifixion than before; and with respect to the second explanation, (including with it the *natural death* of Jesus Christ as a substitute for the *eternal death or damnation* of all mankind,) it is impertinently representing the Creator as coming off, or revoking the sentence, by a pun or a quibble upon the word *death*. That manufacturer of quibbles, St. Paul, if he wrote the books that bear his name, has helped this quibble on by making another quibble upon the word *Adam*. He makes there to be two Adams; the one who sins in fact, and suffers by proxy; the other who sins by proxy, and suffers in fact. A religion thus interlarded with quibble, subterfuge, and pun, has a tendency to instruct its professors in the practice of these arts. They acquire the habit without being aware of the cause.

If Jesus Christ was the being which those Mythologists tell us he was, and that he came into this world to *suffer*, which is a word they sometimes use instead of *to die*, the only real suffering he could have endured, would have been *to live*. His existence here was a state of exilement or transportation from Heaven, and the way back to his original country was to die.—In fine, every thing in this strange system is the reverse of what it pretends to be. It is the reverse of truth, and I become so tired of examining into its inconsistencies and absurdities, that I hasten to the conclusion of it, in order to proceed to something better.

How much, or what parts of the books called the New Testament, were written by the persons whose names they bear, is what we can know

nothing of, neither are we certain in what language they were originally written. The matters they now contain may be classed under two heads—*anecdote* and *epistolary correspondence*.

The four books already mentioned, *Matthew*, *Mark*, *Luke*, and *John*, are altogether *anecdotal*. They relate events after they had taken place. They tell what *Jesus Christ* did and said, and what others did and said to him; and in several instances they relate the same event differently. *Revelation* is necessarily out of the question with respect to those books; not only because of the disagreement of the writers, but because revelation cannot be applied to the relating of facts by the persons who saw them done, nor to the relating or recording of any discourse or conversation by those who heard it. The book called the *Acts of the Apostles* (an anonymous work) belongs also to the *anecdotal* part.

All the other parts of the *New Testament*, except the book of enigmas, called the *Revelations*, are a collection of letters under the name of *epistles*; and the forgery of letters has been such a common practice in the world, that the probability is at least equal, whether they are genuine or forged. One thing, however, is much less equivocal, which is, that out of the matters contained in those books, together with the assistance of some old stories, the church has set up a system of religion very contradictory to the character of the person whose name it bears. It has set up a religion of pomp and of revenue, in pretended imitation of a person whose life was humility and poverty.

The invention of *purgatory*, and of the releasing of souls therefrom, by prayers, bought of the church with money; the selling of pardons, dispensations and indulgencies, are revenue laws, without bearing that name or carrying that appearance. But the case nevertheless is, that those things derive their origin from the paroxysm of the crucifixion and the theory deduced therefrom which was, that one person could stand in the place of another, and could perform meritorious services for him. The probability, therefore, is, that the whole theory or doctrine of what is called the redemption (which is said to have been accomplished by the act of one person in the room of another) was originally fabricated on purpose to bring forward and build all those secondary and pecuniary redemptions upon; and that the passages in the books upon which the idea of theory of redemption is built, have been manufactured and fabricated for that purpose. Why are we to give this church credit, when she tells us that those books are genuine in every part, any more than we give her credit for every thing else she has told us; or for the miracles she says she has performed? That she *could* fabricate writings is certain, because

she could write; and the composition of the writings in question, is of that kind that any body might do it; and that she *did* fabricate them is not more inconsistent with probability, than that she should tell us, as she has done, that she could and did work miracles.

Since, then, no external evidence can, at this long distance of time, be produced to prove whether the church fabricated the doctrines called redemption or not, (for such evidence, whether for or against, would be subject to the same suspicion of being fabricated,) the case can only be referred to the internal evidence which the thing carries within itself; and this affords a very strong presumption of its being a fabrication. For the internal evidence is, that the theory or doctrine of redemption has for its basis an idea of pecuniary justice, and not that of moral justice.

If I owe a person money, and cannot pay him, and he threatens to put me in prison, another person can take the debt upon himself, and pay it for me; but if I have committed a crime, every circumstance of the case is changed; moral justice cannot take the innocent for the guilty, even if the innocent would offer itself. To suppose justice to do this, is to destroy the principle of its existence, which is the thing itself; it is then no longer justice; it is indiscriminate revenge.

This single reflection will show that the doctrine of redemption is founded on a mere pecuniary idea, corresponding to that of a debt, which another person might pay; and as this pecuniary idea corresponds again with the system of second redemptions, obtained through the means of money given to the church for pardons, the probability is, that the same persons fabricated both one and the other of those theories; and that, in truth, there is no such thing as redemption; that it is fabulous, and that man stands in the same relative condition with his Maker he ever did stand, since man existed, and that it is his greatest consolation to think so.

Let him believe this, and he will live more consistently and morally, than by any other system; it is by his being taught to contemplate himself as an out-law, as an out-cast, as a beggar, as a mumper, as one thrown, as it were, on a dunghill, at an immense distance from his Creator, and who must make his approaches by creeping and cringing to intermediate beings, that he conceives either a contemptuous disregard for every thing under the name of religion, or becomes indifferent, or turns, what he calls, devout. In the latter case, he consumes his life in grief, or the affectation of it; his prayers are reproaches; his humility is ingratitude; he calls himself a worm, and the fertile earth a dunghill; and all the blessings of life, by the thankless name of vanities; he despises the choicest gift of

God to man, the GIFT OF REASON; and having endeavoured to force upon himself the belief of a system against which reason revolts, he ungratefully calls it *human reason*, as if man could give reason to himself.

Yet, with all this strange appearance of humility, and this contempt for human reason, he ventures into the boldest presumptions; he finds fault with every thing; his selfishness is never satisfied; his ingratitude is never at an end. He takes on himself to direct the Almighty what to do, even in the government of the universe; he prays dictatorially; when it is sun-shine, he prays for rain, and when it is rain, he prays for sun-shine; he follows the same idea in every thing that he prays for; for what is the amount of all his prayers, but an attempt to make the Almighty change his mind, and act otherwise than he does? It is as if he were to say—thou knowest not so well as I.

But some perhaps will say—Are we to have no word of God—no revelation! I answer, Yes: there is a word of God; there is a revelation.

THE WORD OF GOD IS THE CREATION WE BEHOLD: And it is in *this word*, which no human invention can counterfeit or alter, that God speaketh universally to man.

Human language is local and changeable, and is therefore incapable of being used as the means of unchangeable and universal information. The idea that God sent Jesus Christ to publish, as they say, the glad tidings to all nations, from one end of the earth to the other, is consistent only with the ignorance of those who knew nothing of the extent of the world, and who believed, as those world-saviours believed, and continued to believe, for several centuries, (and that in contradiction to the discoveries of philosophers and the experience of navigators,) that the earth was flat like a trencher; and that a man might walk to the end of it.

But how was Jesus Christ to make any thing known to all nations? He could speak but one language, which was Hebrew; and there are in the world several hundred languages. Scarcely any two nations speak the same language, or understand each other; and as to translations, every man who knows any thing of languages, knows that it was impossible to translate from one language to another, not only without losing a great part of the original, but frequently of mistaking the sense; and besides all this, the art of printing was wholly unknown at the time Christ lived.

It is always necessary that the means that are to accomplish any end, be equal to the accomplishment of that end, or the end cannot be accomplished. It is in this, that the difference between finite and infinite power and wisdom discovers itself. Man frequently fails in accomplishing his ends, from a natural inability of the power to the purpose; and frequently

from the want of wisdom to apply power properly. But it is impossible for infinite power and wisdom to fail as man faileth. The means it useth are always equal to the end; but human language, more especially as there is not an universal language, is incapable of being used as an universal means of unchangeable and uniform information, and therefore it is not the means that God useth in manifesting himself universally to man.

It is only in the CREATION that all our ideas and conceptions of a *word of God* can unite. The Creation speaketh an universal language, independently of human speech or human language, multiplied and various as they be. It is an ever-existing original, which every man can read. It cannot be forged; it cannot be counterfeited; it cannot be lost; it cannot be altered; it cannot be suppressed. It does not depend upon the will of man whether it shall be published or not; it publishes itself from one end of the earth to the other. It preaches to all nations and to all worlds, and this *word of God* reveals to man all that is necessary for man to know of God.

Do we want to contemplate his power? We see it in the immensity of the Creation. Do we want to contemplate his wisdom? We see it in the unchangeable order by which the incomprehensible whole is governed. Do we want to contemplate his munificence? We see it in the abundance with which he fills the earth. Do we want to contemplate his mercy? We see it in his not withholding that abundance even from the unthankful. In fine, do we want to know what God is? Search not the book called the Scripture, which any human hand might make, but the Scripture called the Creation.

The only idea man can affix to the name of God, is that of a *first cause*, the cause of all things. And, incomprehensible and difficult as it is for a man to conceive what a first cause is, he arrives at the belief of it, from the tenfold greater difficulty of disbelieving it. It is difficult beyond description to conceive that space can have no end; but it is more difficult to conceive an end. It is difficult beyond the power of man to conceive an eternal duration of what we call time; but it is more impossible to conceive a time when there shall be no time.

In like manner of reasoning, every thing we behold carries in itself the internal evidence that it did not make itself. Every man is an evidence to himself, that he did not make himself; neither could his father make himself, nor his grandfather, nor any of his race; neither could any tree, plant, or animal make itself; and it is the conviction arising from this evidence, that carries us on, as it were, by necessity, to the belief of a first

cause eternally existing, of a nature totally different to any material existence we know of, and by the power of which all things exist; and this first cause man calls God.

It is only by the exercise of reason, that man can discover God. Take away that reason, and he would be incapable of understanding any thing; and, in this case it would be just as consistent to read even the book called the Bible to a horse as to a man. How then is it that those people pretend to reject reason?

Almost the only parts in the book called the Bible, that convey to us any idea of God, are some chapters in Job, and the 19th Psalm; I recollect no other. Those parts are true *deistical* compositions; for they treat of the *Deity* through his works. They take the book of Creation as the word of God, they refer to no other book, and all the inferences they make are drawn from that volume.

I insert, in this place, the 19th Psalm, as paraphrased into English verse by Addison. I recollect not the prose, and where I write this I have not the opportunity of seeing it.

The spacious firmament on high,
 With all the blue etherial sky,
 And spangled heavens, a shining frame,
 Their great original proclaim.
 The unwearied sun, from day to day,
 Does his Creator's power display;
 And publishes to every land,
 The work of an Almighty hand.
 Soon as the evening shades prevail
 The moon takes up the wondrous tale,
 And nightly to the listning earth,
 Repeats the story of her birth;
 Whilst all the stars that round her burn,
 And all the planets, in their turn,
 Confirm the tidings as they roll,
 And spread the truth from pole to pole.
 What though in solemn silence all
 Move round this dark terrestrial ball;
 What though no real voice, nor sound,
 Amidst their radiant orbs be found,
 In reason's ear they all rejoice,
 And utter forth a glorious voice,
 For ever singing as they shine,
 THE HAND THAT MADE US IS DIVINE.

What more does man want to know, than that the hand or power, that made these things is divine, is omnipotent? Let him believe this with the

force it is impossible to repel, if he permits his reason to act, and his rule of moral life will follow of course.

The allusions in Job have all of them the same tendency with this Psalm; that of deducing or proving a truth that would be otherwise unknown, from truths already known.

I recollect not enough of the passages in Job, to insert them correctly: but there is one occurs to me that is applicable to the subject I am speaking upon. "Canst thou by searching find out God? Canst thou find out the Almighty to perfection?"

I know not how the printers have pointed this passage, for I keep no Bible; but it contains two distinct questions, that admit of distinct answers.

First—Canst thou by searching find out God? Yes; because in the first place, I know I did not make myself, and yet I have existence; and by *searching* into the nature of other things, I find that no other thing could make itself; and yet millions of other things exist; therefore it is, that I know, by positive conclusion resulting from this search, that there is a power superior to all those things, and that power is God.

Secondly—Canst thou find out the Almighty to *perfection*? No; not only because the power and wisdom He has manifested in the structure of the Creation that I behold is to me incomprehensible, but because even this manifestation, great as it is, is probably but a small display of that immensity of power and wisdom, by which millions of other worlds, to me invisible by their distance, were created and continue to exist.

It is evident that both of these questions are put to the reason of the person to whom they are supposed to have been addressed; and it is only by admitting the first question to be answered affirmatively, that the second could follow. It would have been unnecessary, and even absurd, to have put a second question more difficult than the first, if the first question had been answered negatively. The two questions have different objects; the first refers to the existence of God, the second to his attributes; reason can discover the one, but it falls infinitely short in discovering the whole of the other.

I recollect not a single passage in all the writings ascribed to the men called apostles, that convey any idea of what God is. Those writings are chiefly controversial; and the subject they dwell upon, that of a man dying in agony on a cross, is better suited to the gloomy genius of a monk in a cell, by whom it is not impossible they were written, than to any man breathing the open air of the Creation. The only passage that occurs to me, that has any reference to the works of God, by which only his power

and wisdom can be known, is related to have been spoken by Jesus Christ, as a remedy against distrustful care. "Behold the lilies of the field, they toil not, neither do they spin." This, however, is far inferior to the allusions in Job and in the 19th Psalm; but it is similar in idea, and the modesty of the imagery is correspondent to the modesty of the man.

As to the Christian system of faith, it appears to me as a species of atheism—a sort of religious denial of God. It professes to believe in a man rather than in God. It is a compound made up chiefly of manism with but little deism, and is as near to atheism as twilight is to darkness. It introduces between man and his Maker an opaque body, which it calls a Redeemer, as the moon introduces her opaque self between the earth and the sun, and it produces by this means a religious or an irreligious eclipse of light. It has put the whole orbit of reason into shade.

The effect of this obscurity has been that of turning every thing upside down, and representing it in reverse; and among the revolutions it has thus magically produced, it has made a revolution in Theology.

That which is now called natural philosophy, embracing the whole circle of science, of which Astronomy occupies the chief place, is the study of the works of God, and of the power and wisdom of God in his works, and is the true theology.

As to the theology that is now studied in its place, it is the study of human opinions, and of human fancies *concerning* God. It is not the study of God himself in the works that he has made, but in the works or writings that man has made; and it is not among the least of the mischiefs that the Christian system has done to the world, that it has abandoned the original and beautiful system of theology, like a beautiful innocent, to distress and reproach, to make room for the hag of superstition.

The book of Job, and the 19th Psalm, which even the church admits to be more ancient than the chronological order in which they stand in the book called the Bible, are theological orations conformable to the original system of theology. The internal evidence of those orations proves to a demonstration that the study and contemplation of the works of Creation, and of the power and wisdom of God, revealed and manifested in those works, made a great part of the religious devotion of the times in which they were written; and it was this devotional study and contemplation that led to the discovery of the principles upon which, what are now called Sciences, are established; and it is to the discovery of these principles that almost all the Arts that contribute to the convenience of human life, owe their existence. Every principal art has some science for its parent, though the person who mechanically performs

the work does not always, and but very seldom, perceive the connexion.

It is a fraud of the Christian system to call the sciences *human invention*; it is only the application of them that is human. Every science has for its basis a system of principles as fixed and unalterable as those by which the universe is regulated and governed. Man cannot make principles, he can only discover them.

For example—Every person who looks at an Almanack sees an account when an eclipse will take place, and he sees also that it never fails to take place according to the account there given. This shows that man is acquainted with the laws by which the heavenly bodies move. But it would be something worse than ignorance, were any church on earth to say, that those laws are a human invention. It would also be ignorance, or something worse, to say that the scientific principles, by the aid of which man is enabled to calculate and foreknow when an eclipse will take place, are a human invention. Man cannot invent any thing that is eternal and immutable; and the scientific principles he employs for this purpose must, and are, of necessity, as eternal and immutable as the laws by which the heavenly bodies move, or they could not be used as they are to ascertain the time when, and the manner how, an eclipse will take place.

The scientific principles that man employs to obtain the foreknowledge of an eclipse, or of any thing else, relating to the motion of the heavenly bodies, are contained chiefly in that part of science which is called Trigonometry, or the properties of a triangle, which when applied to the study of the heavenly bodies, is called Astronomy; when applied to direct the course of a ship on the ocean, it is called Navigation; when applied to the construction of figures drawn by rule and compass, it is called Geometry; when applied to the construction of plans of edifices, it is called Architecture; when applied to the measurement of any portion of the surface of the earth, it is called Land-surveying. In fine, it is the soul of science; it is an eternal truth; it contains the *mathematical demonstration* of which man speaks, and the extent of its uses is unknown.

It may be said, that man can make or draw a triangle, and therefore a triangle is an human invention.

But the triangle, when drawn, is no other than the image of the principle; it is a delineation to the eye, and from thence to the mind, of a principle that would otherwise be imperceptible. The triangle does not make the principle, any more than a candle taken into a room that was dark, makes the chairs and tables that before were invisible. All the properties of a triangle exist independently of the figure, and existed before any triangle was drawn or thought of by man. Man had no more to do in

the formation of those properties or principles, than he had to do in making the laws by which the heavenly bodies move; and therefore the one must have the same divine origin as the other.

In the same manner as it may be said, that man can make a triangle, so also may it be said, he can make the mechanical instrument called a lever; but the principle, by which the lever acts is a thing distinct from the instrument, and would exist if the instrument did not: it attaches itself to the instrument after it is made; the instrument, therefore, can act no otherwise than it does act; neither can all the efforts of human invention make it act otherwise—that which, in all such cases, man calls the *effect*, is no other than the principle itself rendered perceptible to the senses.

Since then man cannot make principles, from whence did he gain a knowledge of them, so as to be able to apply them, not only to things on earth, but to ascertain the motion of bodies so immensely distant from him as all the heavenly bodies are? From whence, I ask, *could* he gain that knowledge, but from the study of the true theology?

It is the structure of the universe that has taught this knowledge to man. That structure is an ever-existing exhibition of every principle upon which every part of mathematical science is founded. The offspring of this science is mechanics; for mechanics is no other than the principles of science applied practically. The man who proportions the several parts of a mill, uses the same scientific principles, as if he had the power of constructing an universe; but as he cannot give to matter that invisible agency, by which all the component parts of the immense machine of the universe have influenced upon each other and act in motional unison together, without any apparent contact, and to which man has given the name of attraction, gravitation, and repulsion, he supplies the place of that agency by the humble imitation of teeth and cogs.—All the parts of man's microcosm must visibly touch: but could he gain a knowledge of that agency, so as to be able to apply it in practice, we might then say, that another *canonical book* of the word of God had been discovered.

If man could alter the properties of the lever, so also could he alter the properties of the triangle: for a lever (taking that sort of lever which is called a steel-yard, for the sake of explanation) forms, when in motion, a triangle. The line it descends from, (one point of that line being in the fulcrum,) the line it descends to, and the cord of the arc, which the end of the lever describes in the air, are the three sides of a triangle. The other arm of the lever describes also a triangle; and the corresponding sides of those two triangles, calculated scientifically, or measured geometrically:

and also the sines, tangents, and secants generated from the angles, and geometrically measured, have the same proportions to each other, as the different weights have that will balance each other on the lever, leaving the weight of the lever out of the case.

It may also be said, that man can make a wheel and axis, that he can put wheels of different magnitudes together, and produce a mill. Still the case comes back to the same point, which is, that he did not make the principle that gives the wheels those powers. That principle is as unalterable as in the former case, or rather it is the same principle under a different appearance to the eye.

The power that two wheels, of different magnitudes, have upon each other, is in the same proportion as if the semi-diameter of the two wheels were joined together and made into that kind of lever I have described, suspended at the part where the semi-diameters join; for the two wheels, scientifically considered, are no other than the two circles generated by the motion of the compound lever.

It is from the study of the true theology that all our knowledge of science is derived, and it is from that knowledge that all the arts have originated.

The Almighty lecturer, by displaying the principles of science in the structure of the universe, has invited man to study and to imitation. It is as if he had said to the inhabitants of this globe, that we call ours, "I have made an earth for man to dwell upon, and I have rendered the starry heavens visible, to teach him science and the arts. He can now provide for his own comfort AND LEARN FROM MY MUNIFICENCE TO ALL, TO BE KIND TO EACH OTHER."

Of what use is it, unless it be to teach man something, that his eye is endowed with the power of beholding, to an incomprehensible distance, an immensity of worlds revolving in the ocean of space? Or of what use is it that this immensity of worlds is visible to man? What has man to do with the Pleiades, with Orion, with Sirius, with the star he calls the north star, with the moving orbs he has named Saturn, Jupiter, Mars, Venus, and Mercury, if no uses are to follow from their being visible? A less power of vision would have been sufficient for man, if the immensity he now possesses were given only to waste itself, as it were, on an immense desert of space glittering with shows.

It is only by contemplating what he calls the starry heavens, as the book and school of science, that he discovers any use in their being visible to him, or any advantage resulting from his immensity of vision. But when he contemplates the subject in this light, he sees an additional

motive for saying, that *nothing was made in vain*; for in vain would be this power of vision if it taught man nothing.

As the Christian system of faith has made a revolution in theology, so also has it made a revolution in the state of learning. That which is now called learning, was not learning, originally. Learning does not consist, as the schools now make it consist, in the knowledge of languages, but in the knowledge of things to which language gives names.

The Greeks were a learned people, but learning with them did not consist in speaking Greek, any more than in a Roman's speaking Latin, or a Frenchman's speaking French, or an Englishman's speaking English. From what we know of the Greeks, it does not appear that they knew or studied any language but their own, and this was one cause of their becoming so learned; it afforded them more time to apply themselves to better studies. The schools of the Greeks were schools of science and philosophy, and not of languages; and it is in the knowledge of the things that science and philosophy teach, that learning consists.

Almost all the scientific learning that now exists, came to us from the Greeks, or the people who spoke the Greek language.—It, therefore, became necessary for the people of other nations, who spoke a different language, that some among them should learn the Greek language, in order that the learning the Greeks had, might be made known in those nations, by translating the Greek books of science and philosophy into the mother tongue of each nation.

The study, therefore, of the Greek language (and in the same manner for the Latin) was no other than the drudgery business of a linguist; and the language thus obtained, was no other than the means, as it were the tools, employed to obtain the learning the Greeks had. It made no part of the learning itself; and was so distinct from it, as to make it exceedingly probable that the persons who had studied Greek sufficiently to translate those works, such, for instance, as Euclid's Elements, did not understand any of the learning the works contained.

As there is now nothing new to be learned from the dead languages, all the useful books being already translated, the languages are become useless, and the time expended in teaching and learning them is wasted. So far as the study of languages may contribute to the progress and communication of knowledge, (for it has nothing to do with the *creation* of knowledge,) it is only in the living languages that new knowledge is to be found; and certain it is, that, in general, a youth will learn more of a living language in one year, than of a dead language in seven; and it is but seldom that the teacher knows much of it himself. The difficulty of

learning the dead languages does not arise from any superior abstruseness in the languages themselves, but in their *being dead*, and the pronunciation entirely lost. It would be the same thing with any other language when it becomes dead. The best Greek linguist that now exists, does not understand Greek so well as a Grecian ploughman did, or a Grecian milkmaid: and the same for the Latin, compared with a ploughman or milkmaid of the Romans; it would therefore be advantageous to the state of learning to abolish the study of the dead languages, and to make learning consist, as it originally did, in scientific knowledge.

The apology that is sometimes made for continuing to teach the dead languages is, that they are taught at a time, when a child is not capable of exerting any other mental faculty than that of memory; but that is altogether erroneous. The human mind has a natural disposition to scientific knowledge, and to the things connected with it. The first and favourite amusement of a child, even before it begins to play, is that of imitating the works of man. It builds houses with cards or sticks; it navigates the little ocean of a bowl of water with a paper boat, or dams the stream of a gutter, and contrives something which it calls a mill; and it interests itself in the fate of its works with a care that resembles affection. It afterwards goes to school, where its genius is killed by the barren study of a dead language, and the philosopher is lost in the linguist.

But the apology that is now made for continuing to teach the dead languages, could not be the cause, at first, of cutting down learning to the narrow and humble sphere of linguistry; the cause, therefore, must be sought for elsewhere. In all researches of this kind, the best evidence that can be produced, is the internal evidence the thing carries with itself, and the evidence of circumstances that unites with it; both of which, in this case, are not difficult to be discovered.

Putting then aside, as a matter of distinct consideration, the outrage offered to the moral justice of God, by supposing him to make the innocent suffer for the guilty, and also the loose morality and low contrivance of supposing him to change himself into the shape of a man, in order to make an excuse to himself for not executing his supposed sentence upon Adam; putting, I say, those things aside as a matter of distinct consideration, it is certain that what is called the Christian system of faith, including in it the whimsical account of the creation—the strange story of Eve—the snake and the apple—the ambiguous idea of a man-god—the corporeal idea of the death of a god—the mythological idea of a family of gods, and the Christian system of arithmetic, that three are one, and one is three, are all irreconcilable, not only to the divine gift of reason,

that God hath given to Man, but to the knowledge that man gains of the power and wisdom of God, by the aid of the sciences, and by studying the structure of the universe that God has made.

The setters-up, therefore, and the advocates of the Christian system of faith, could not but foresee that the continually progressive knowledge that man would gain, by the aid of science, of the power and wisdom of God, manifested in the structure of the universe, and in all the works of Creation, would militate against, and call into question, the truth of their system of faith; and therefore it became necessary to their purpose to cut learning down to a size less dangerous to their project, and this they effected by restricting the idea of learning to the dead study of dead languages.

They not only rejected the study of science out of the Christian schools, but they persecuted it; and it is only within about the last two centuries that the study has been revived. So late as 1610, Galileo, a Florentine, discovered and introduced the use of telescopes, and by applying them to observe the motions and appearance of the heavenly bodies, afforded additional means for ascertaining the true structure of the universe. Instead of being esteemed for those discoveries, he was sentenced to renounce them, or the opinions resulting from them, as a damnable heresy. And, prior to that time, Vigilius was condemned to be burned for asserting the antipodes, or in other words, that the earth was a globe, and habitable in every part where there was land; yet the truth of this is now too well known even to be told.

If the belief of errors not morally bad did no mischief, it would make no part of the moral duty of man to oppose and remove them. There was no moral ill in believing the earth was flat like a trencher, any more than there was moral virtue in believing that it was round like a globe; neither was there any moral ill in believing that the Creator made no other world than this, any more than there was moral virtue in believing that he made millions, and that the infinity of space is filled with worlds. But when a system of religion is made to grow out of a supposed system of creation that is not true, and to unite itself therewith in a manner almost inseparable therefrom, the case assumes an entirely different ground. It is then that errors, not morally bad, become fraught with the same mischiefs as if they were. It is then that the truth, though otherwise indifferent itself, becomes an essential, by becoming the criterion, that either confirms by corresponding evidence, or denies by contradictory evidence, the reality of the religion itself. In this view of the case, it is the moral duty of man to obtain every possible evidence that the structure of the

heavens, or any other part of creation affords, with respect to systems of religion. But this, the supporters or partizans of the Christian system, as if dreading the result, incessantly opposed, and not only rejected the sciences, but persecuted the professors. Had Newton or Descartes lived three or four hundred years ago, and pursued their studies as they did, it is most probable they would not have lived to finish them; and had Franklin drawn lightning from the clouds at the same time, it would have been at the hazard of expiring for it in flames.

Later times have laid all the blame upon the Goths and Vandals; but, however unwilling the partizans of the Christian system may be to believe or to acknowledge it, it is nevertheless true, that the age of ignorance commenced with the Christian system.—There was more knowledge in the world before that period, than for many centuries afterwards; and as to religious knowledge, the Christian system, as already said, was only another species of mythology; and the mythology to which it succeeded, was a corruption of an ancient system of theism.*

It is owing to this long interregnum of science, *and to no other cause*, that we have now to look through a vast chasm of many hundred years to the respectable characters we call the ancients.—Had the progression of knowledge gone on proportionably with the stock that before existed, that chasm would have been filled up with characters rising superior in knowledge to each other; and those ancients we now so much admire, would have appeared respectably in the back ground of the scene. But

* It is impossible for us now to know at what time the heathen mythology began; but it is certain, from the internal evidence that it carries, that it did not begin in the same state or condition in which it ended. All the gods of that mythology, except Saturn, were of modern invention. The supposed reign of Saturn was prior to that which is called the heathen mythology, and was so far a species of theism, that it admitted the belief of only one God. Saturn is supposed to have abdicated the government in favor of his three sons and one daughter, Jupiter, Pluto, Neptune, and Juno; after this, thousands of other gods and demi-gods were imaginarily created, and the calendar of gods increased as fast as the calendar of saints, and the calendars of courts have increased since.

All the corruptions that have taken place, in theology and in religion, have been produced by admitting of what man calls *revealed religion*. The Mythologists pretended to more revealed religion than the Christians do. They had their oracles and their priests, who were supposed to receive and deliver the word of God verbally, on almost all occasions.

Since then all corruptions down from Molock to modern predestinarianism, and the human sacrifices of the heathens to the Christian sacrifice of the Creator, have been produced by admitting of what is called *revealed religion*, the most effectual means to prevent all such evils and impositions is, not to admit of any other revelation than that which is manifested in the book of creation, and to contemplate the creation as the only true and real work of God that ever did, or ever will exist; and that every thing else, called the word of God, is *fable and imposition*.

the Christian system laid all waste; and if we take our stand about the beginning of the sixteenth century, we look back through that long chasm, to the times of the ancients, as over a vast sandy desert, in which not a shrub appears to intercept the vision to the fertile hills beyond.

It is an inconsistency scarcely possible to be credited, that any thing should exist, under the name of a religion, that held it to be *irreligious* to study and contemplate the structure of the universe that God had made. But the fact is too well established to be denied. The event that served more than any other to break the first link in this long chain of despotic ignorance, is that known by the name of the Reformation by Luther. From that time, though it does not appear to have made any part of the intention of Luther, or of those who are called reformers, the sciences began to revive, and liberality, their natural associate, began to appear. This was the only public good the Reformation did; for, with respect to religious good, it might as well not have taken place. The mythology still continued the same; and a multiplicity of National Popes grew out of the downfall of the Pope of Christendom.

Having thus shown from the internal evidence of things, the cause that produced a change in the state of learning, and the motive for substituting the study of dead languages, in the place of the sciences, I proceed, in addition to the several observations, already made in the former part of this work, to compare, or rather to confront the evidence that the structure of the universe affords, with the Christian system of religion; but, as I cannot begin this part better than by referring to the ideas that occurred to me at an early part of life, and which I doubt not have occurred in some degree to almost every other person at one time or other, I shall state what those ideas were, and add thereto such other matter as shall arise out of the subject, giving to the whole, by way of preface, a short introduction.

My father being of the Quaker profession, it was my good fortune to have an exceeding good moral education, and a tolerable stock of useful learning. Though I went to the grammar school,* I did not learn Latin, not only because I had no inclination to learn languages, but because of the objection the Quakers have against the books in which the language is taught. But this did not prevent me from being acquainted with the subjects of all the Latin books used in the school.

The natural bent of my mind was to science. I had some turn, and I believe some talent for poetry; but this I rather repressed than encour-

* The same school, Thetford in Norfolk, that the present Counsellor Mingay went to, and under the same master.

aged, as leading too much into the field of imagination. As soon as I was able, I purchased a pair of globes, and attended the philosophical lectures of Martin and Ferguson, and became afterwards acquainted with Dr. Bevis, of the society, called the Royal Society, then living in the Temple, and an excellent astronomer.

I had no disposition for what is called politics. It presented to my mind no other idea than is contained in the word Jockeyship. When, therefore, I turned my thoughts towards matters of government, I had to form a system for myself, that accorded with the moral and philosophic principles in which I had been educated. I saw or at least I thought I saw, a vast scene opening itself to the world in the affairs of America; and it appeared to me, that unless the Americans changed the plan they were then pursuing, with respect to the government of England, and declared themselves independent, they would not only involve themselves in a multiplicity of new difficulties, but shut out the prospect that was then offering itself to mankind through their means. It was from these motives that I published the work known by the name of "*Common Sense*," which is the first work I ever did publish; and so far as I can judge of myself, I believe I should never have been known in the world as an author, on any subject whatever, had it not been for the affairs of America. I wrote "*Common Sense*" the latter end of the year 1775, and published it the first of January, 1776. Independence was declared the fourth of July following.

Any person, who has made observations on the state and progress of the human mind, by observing his own, cannot but have observed, that there are two distinct classes of what are called Thoughts; those that we produce in ourselves by reflection and the act of thinking, and those that bolt into the mind of their own accord. I have always made it a rule to treat those voluntary visitors with civility, taking care to examine, as well as I was able, if they were worth entertaining; and it is from them I have acquired almost all the knowledge that I have. As to the learning that any person gains from school education, it serves only, like a small capital, to put him in the way of beginning learning for himself afterwards.—Every person of learning is finally his own teacher, the reason of which is, that principles, being of a distinct quality to circumstances, cannot be impressed upon the memory; their place of mental residence is the understanding, and they are never so lasting as when they begin by conception. Thus much for the introductory part.

From the time I was capable of conceiving an idea, and acting upon it by reflection, I either doubted the truth of the Christian system, or

thought it to be a strange affair; I scarcely knew which it was: but I well remember, when about seven or eight years of age, hearing a sermon read by a relation of mine, who was a great devotee of the church, upon the subject of what is called *redemption by the death of the Son of God*. After the sermon was ended, I went into the garden, and as I was going down the garden steps (for I perfectly recollect the spot) I revolted at the recollection of what I had heard, and thought to myself that it was making God Almighty act like a passionate man, that killed his son, when he could not revenge himself any other way; and as I was sure a man would be hanged that did such a thing, I could not see for what purpose they preached such sermons. This was not one of those kind of thoughts that had any thing in it of childish levity; it was to me a serious reflection, arising from the idea I had, that God was too good to do such an action, and also too almighty to be under any necessity of doing it. I believe in the same manner at this moment; and I moreover believe, that any system of religion that has any thing in it that shocks the mind of a child, cannot be a true system.

It seems as if parents of the Christian profession were ashamed to tell their children any thing about the principles of their religion. They sometimes instruct them in morals, and talk to them of the goodness of what they call Providence; for the Christian mythology has five deities—there is God the Father, God the Son, God the Holy Ghost, the God Providence, and the Goddess Nature. But the Christian story of God the Father putting his son to death, or employing people to do it, (for that is the plain language of the story,) cannot be told by a parent to a child; and to tell him that it was done to make mankind happier and better, is making the story still worse, as if mankind could be improved by the example of murder; and to tell him that all this is a mystery, is only making an excuse for the incredibility of it.

How different is this to the pure and simple profession of Deism! The true Deist has but one Deity; and his religion consists in contemplating the power, wisdom, and benignity of the Deity in his works, and in endeavoring to imitate him in every thing moral, scientific, and mechanical.

The religion that approaches the nearest of all others to true Deism, in the moral and benign part thereof, is that professed by the Quakers: but they have contracted themselves too much, by leaving the works of God out of their system. Though I reverence their philanthropy, I cannot help smiling at the conceit, that if the taste of a Quaker could have been consulted at the creation, what a silent and drab-colored creation it would

have been! Not a flower would have blossomed its gaities, nor a bird been permitted to sing.

Quitting these reflections, I proceed to other matters. After I had made myself master of the use of the globes, and of the orrery,* and conceived an idea of the infinity of space, and the eternal divisibility of matter, and obtained, at least, a general knowledge of what is called natural philosophy, I began to compare, or, as I have before said, to confront the eternal evidence those things afford with the Christian system of faith.

Though it is not a direct article of the Christian system, that this world that we inhabit, is the whole of the habitable creation, yet it is so worked up therewith, from what is called the Mosaic account of the Creation, the story of Eve and the apple, and the counterpart of that story, the death of the Son of God, that to believe otherwise, that is, to believe that God created a plurality of worlds, at least as numerous as what we call stars, renders the Christian system of faith at once little and ridiculous, and scatters it in the mind like feathers in the air. The two beliefs cannot be held together in the same mind; and he who thinks that he believes both, has thought but little of either.

Though the belief of a plurality of worlds was familiar to the ancients, it is only within the last three centuries that the extent and dimensions of this globe that we inhabit have been ascertained. Several vessels, following the tract of the ocean, have sailed entirely round the world, as a man may march in a circle, and come round by the contrary side of the circle to the spot he set out from. The circular dimensions of our world, in the widest part, as a man would measure the widest round of an apple, or a ball, is only twenty-five thousand and twenty English miles, reckoning sixty-nine miles and an half to an equatorial degree, and may be sailed round in the space of about three years.*

A world of this extent may, at first thought, appear to us to be great;

* As this book may fall into the hands of persons who do not know what an orrery is, it is for their information I add this note, as the name gives no idea of the uses of the thing. The orrery has its name from the person who invented it. It is a machinery of clock-work, representing the universe in miniature, and in which the revolution of the earth round itself and round the sun, the revolution of the moon round the earth, the revolution of the planets round the sun, their relative distances from the sun, as the centre of the whole system, their relative distances from each other, and their different magnitudes, are represented as they really exist in what we call the heavens.

* Allowing a ship to sail, on an average, three miles in an hour, she would sail entirely round the world in less than one year, if she could sail in a direct circle; but she is obliged to follow the course of the ocean.

but if we compare it with the immensity of space in which it is suspended, like a bubble or balloon in the air, it is infinitely less, in proportion, than the smallest grain of sand is to the size of the world, or the finest particle of dew to the whole ocean, and is therefore but small; and, as will be hereafter shown, is only one of a system of worlds, of which the universal creation is composed.

It is not difficult to gain some faint idea of the immensity of space in which this and all the other worlds are suspended, if we follow a progression of ideas. When we think of the size or dimensions of a room, our ideas limit themselves to the walls, and there they stop; but when our eye, or our imagination darts into space, that is, when it looks upwards into what we call the open air, we cannot conceive any walls or boundaries it can have; and if for the sake of resting our ideas, we suppose a boundary, the question immediately renews itself, and asks, what is beyond that boundary? and in the same manner, what beyond the next boundary? and so on till the fatigued imagination returns and says, *there is no end*. Certainly, then, the Creator was not pent for room, when he made this world no larger than it is; and we have to seek the reason in something else.

If we take a survey of our own world, or rather of this, of which the Creator has given us the use, as our portion in the immense system of Creation, we find every part of it, the earth, the waters, and the air that surrounds it, filled, and, as it were, crowded with life, down from the largest animals that we know of to the smallest insects the naked eye can behold, and from thence to others still smaller, and totally invisible without the assistance of the microscope. Every tree, every plant, every leaf, serves not only as an habitation, but as a world to some numerous race, till animal existence becomes so exceedingly refined, that the effluvia of a blade of grass would be food for thousands.

Since then no part of our earth is left unoccupied, why is it to be supposed that the immensity of space is a naked void, lying in eternal waste? There is room for millions of worlds as large or larger than ours, and each of them millions of miles apart from each other.

Having now arrived at this point, if we carry our ideas only one thought further, we shall see, perhaps, the true reason, at least a very good reason, for our happiness, why the Creator, instead of making one immense world, extending over an immense quantity of space, has preferred dividing that quantity of matter into several distinct and separate worlds, which we call planets, of which our earth is one. But before I explain my ideas upon this subject, it is necessary (not for the sake of

those that already know, but for those who do not) to show what the system of the universe is.

That part of the universe that is called the solar system (meaning the system of worlds to which our earth belongs, and of which Sol, or in English language, the Sun, is the centre) consists, besides the Sun, of six distinct orbs, or planets, or worlds, besides the secondary bodies, called the satellites or moons, of which our earth has one that attends her in her annual revolution round the Sun, in like manner as other satellites or moons, attend the planets or worlds to which they severally belong, as may be seen by the assistance of the telescope.

The Sun is the centre, round which those six worlds or planets revolve at different distances therefrom, and in circles concentrate to each other. Each world keeps constantly in nearly the same track round the Sun, and continues, at the same time, turning round itself, in nearly an upright position, as a top turns round itself when it is spinning on the ground, and leans a little sideways.

It is this leaning of the earth ($23\frac{1}{2}$ degrees) that occasions summer and winter, and the different length of days and nights. If the earth turned round itself in a position perpendicular to the plane or level of the circle it moves in around the Sun, as a top turns round when it stands erect on the ground, the days and nights would be always of the same length, twelve hours day and twelve hours night, and the seasons would be uniformly the same throughout the year.

Every time that a planet (our earth for example) turns round itself, it makes what we call day and night; and every time it goes entirely round the Sun, it makes what we call a year, consequently our world turns three hundred and sixty-five times round itself, in going once round the Sun.*

The names that the ancients gave to those six worlds, and which are still called by the same names, are Mercury, Venus, this world that we call ours, Mars, Jupiter, and Saturn. They appear larger to the eye than the stars, being many million miles nearer to our earth than any of the stars are. The planet Venus is that which is called the evening star, and sometimes the morning star, as she happens to set after, or rise before the Sun, which in either case, is never more than three hours.

The Sun, as before said, being the centre, the planet, or world, nearest the Sun, is Mercury; his distance from the Sun is thirty-four million miles, and he moves round in a circle always at that distance from the

* Those who supposed that the Sun went round the earth every 24 hours, made the same mistake in idea that a cook would do in fact, that should make the fire go round the meat, instead of the meat turning round itself towards the fire.

Sun, as a top may be supposed to spin round in the track in which a horse goes in a mill. The second world is Venus, she is fifty-seven million miles distant from the Sun, and consequently moves round in a circle much greater than that of Mercury. The third world is that we inhabit, and which is eighty-eight million miles distant from the Sun, and consequently moves round in a circle greater than that of Venus. The fourth world is Mars, he is distant from the Sun one hundred and thirty-four million miles, and consequently moves round in a circle greater than that of our earth. The fifth is Jupiter, he is distant from the Sun five hundred and fifty-seven million miles, and consequently moves round in a circle greater than that of Mars. The sixth world is Saturn, he is distant from the Sun seven hundred and sixty-three million miles, and consequently moves round in a circle that surrounds the circles, or orbits, of all the other worlds or planets.

The space, therefore, in the air, or in the immensity of space, that our solar system takes up for the several worlds to perform their revolutions in round the Sun, is of the extent in a straight line of the whole diameter of the orbit or circle, in which Saturn moves round the Sun, which being double his distance from the Sun, is fifteen hundred and twenty-six million miles: and its circular extent is nearly five thousand million; and its globical content is almost three thousand five hundred million times three thousand five hundred million square miles.*

But this, immense as it is, is only one system of worlds. Beyond this, at a vast distance into space, far beyond all power of calculation, are the stars called the fixed stars. They are called fixed, because they have no revolutionary motion, as the six worlds or planets have that I have been describing. Those fixed stars continue always at the same distance from each other, and always in the same place, as the Sun does in the centre of our system. The probability, therefore, is, that each of those fixed stars

* If it should be asked, how can man know these things I have one plain answer to give, which is, that man knows how to calculate an eclipse, and also how to calculate to a minute of time when the planet Venus, in making her revolutions round the Sun, will come in a straight line between our earth and the Sun, and will appear to us about the size of a large pea passing across the face of the Sun. This happens but twice in about an hundred years, at the distance of about eight years from each other, and has happened twice in our time, both of which were foreknown by calculation. It can also be known when they will happen again for a thousand years to come, or to any other portion of time. As, therefore, man could not be able to do these things if he did not understand the solar system, and the manner in which the revolutions of the several planets or worlds are performed, the fact of calculating an eclipse, or a transit of Venus, is a proof in point that the knowledge exists; and as to a few thousand, or even a few million miles, more or less, it makes scarcely any sensible difference in such immense distances.

is also a Sun, round which another system of worlds or planets, though too remote for us to discover, performs its revolutions, as our system of worlds does round our central Sun.

By this easy progression of ideas, the immensity of space will appear to us to be filled with systems of worlds; and that no part of space lies at waste, any more than any part of the globe or earth and water is left unoccupied.

Having thus endeavoured to convey, in a familiar and easy manner, some idea of the structure of the universe, I return to explain what I before alluded to, namely, the great benefits arising to man in consequence of the Creator having made a *plurality* of worlds, such as our system is, consisting of a central Sun and six worlds besides satellites, in preference to that of creating one world only of a vast extent.

It is an idea I have never lost sight of, that all our knowledge of science is derived from the revolutions (exhibited to our eye and from thence to our understanding) which those several planets or worlds, of which our system is composed, make in their circuit round the Sun.

Had then the quantity of matter which these six worlds contain been blended into one solitary globe, the consequence to us would have been, that either no revolutionary motion would have existed, or not a sufficiency of it to give us the idea and the knowledge of science we now have; and it is from the sciences that all the mechanical arts that contribute so much to our earthly felicity and comfort, are derived.

As, therefore, the Creator made nothing in vain, so also must it be believed that He organized the structure of the universe in the most advantageous manner for the benefit of man; and as we see, and from experience feel, the benefits we derive from the structure of the universe, formed as it is, which benefits we should not have had the opportunity of enjoying, if the structure, so far as relates to our system, had been a solitary globe—we can discover at least one reason why a *plurality* of worlds has been made, and that reason calls forth the devotional gratitude of man, as well as his admiration.

But it is not to us, the inhabitants of this globe, only, that the benefits arising from a plurality of worlds are limited. The inhabitants of each of the worlds of which our system is composed, enjoy the same opportunities of knowledge as we do. They behold the revolutionary motions of our earth, as we behold theirs. All the planets revolve in sight of each other; and, therefore, the same universal school of science presents itself to all.

Neither does the knowledge stop here. The system of worlds next to us exhibits, in its revolutions, the same principles and school of science,

to the inhabitants of their system, as our system does to us, and in like manner throughout the immensity of space.

Our ideas, not only of the almightiness of the Creator, but of his wisdom and his beneficence, become enlarged in proportion as we contemplate the extent and the structure of the universe. The solitary idea of a solitary world, rolling or at rest in the immense ocean of space, gives place to the cheerful idea of a society of worlds, so happily contrived as to administer, even by their motion, instruction to man. We see our own earth filled with abundance; but we forget to consider how much of that abundance is owing to the scientific knowledge the vast machinery of the universe has unfolded.

But, in the midst of those reflections, what are we to think of the Christian system of faith, that forms itself upon the idea of only one world, and that of no greater extent, as is before shown, than twenty-five thousand miles? An extent which a man, walking at the rate of three miles an hour, for twelve hours in the day, could he keep on in a circular direction, would walk entirely round in less than two years. Alas! what is this to the mighty ocean of space, and the almighty power of the Creator!

From whence then could arise the solitary and strange conceit, that the Almighty, who had millions of worlds equally dependent on his protection, should quit the care of all the rest, and come to die in our world, because, they say, one man and one woman had eaten an apple! And, on the other hand, are we to suppose that every world in the boundless creation, had an Eve, an apple, a serpent and a redeemer? In this case, the person who is irreverently called the Son of God, and sometimes God himself, would have nothing else to do than to travel from world to world, in an endless succession of death, with scarcely a momentary interval of life.

It has been by rejecting the evidence, that the word or works of God in the creation affords to our senses, and the action of our reason upon that evidence, that so many wild and whimsical systems of faith, and of religion, have been fabricated and set up. There may be many systems of religion, that so far from being morally bad, are in many respects morally good: but there can be but ONE that is true; and that one necessarily must, as it ever will, be in all things consistent with the ever existing word of God that we behold in his works. But such is the strange construction of the Christian system of faith, that every evidence the Heavens afford to man, either directly contradicts it, or renders it absurd.

It is possible to believe, and I always feel pleasure in encouraging myself to believe it, that there have been men in the world, who persuade

themselves that, what is called a *pious fraud*, might at least under particular circumstances, be productive of some good. But the fraud being once established, could not afterwards be explained; for it is with a pious fraud as with a bad action, it begets a calamitous necessity of going on.

The persons who first preached the Christian system of faith, and in some measure combined it with the morality preached by Jesus Christ, might persuade themselves that it was better than the heathen mythology that then prevailed. From the first preachers the fraud went on to the second, and to the third, till the idea of its being a pious fraud became lost in the belief of its being true; and that belief became again encouraged by the interests of those who made a livelihood by preaching it.

But though such a belief might, by such means, be rendered almost general among the laity, it is next to impossible to account for the continual persecution carried on by the church, for several hundred years, against the sciences, and against the professors of sciences, if the church had not some record or tradition, that it was originally no other than a pious fraud, or did not foresee, that it could not be maintained against the evidence that the structure of the universe afforded.

Having thus shown the irreconcilable inconsistencies between the real word of God existing in the universe and that which is called *the word of God*, as shown to us in a printed book that any man might make, I proceed to speak of the three principal means that have been employed in all ages, and perhaps in all countries, to impose upon mankind.

Those three means are Mystery, Miracle, and Prophecy. The two first are incompatible with true religion, and the third ought always to be suspected.

With respect to mystery, every thing we behold is, in one sense, a mystery to us. Our own existence is a mystery; the whole vegetable world is a mystery. We cannot account how it is that an acorn, when put into the ground, is made to develope itself, and become an oak. We know not how it is that the seed we sow unfolds and multiplies itself, and returns to us such an abundant interest for so small a capital.

The fact, however, as distinct from the operating cause, is not a mystery, because we see it; and we know also the means we are to use, which is no other than putting seed in the ground.—We know, therefore, as much as is necessary for us to know; and that part of the operation that we do not know, and which if we did we could not perform, the Creator takes upon himself and performs it for us. We are, therefore, better off than if we had been let into the secret, and left to do it for ourselves.

But though every created thing is, in this sense, a mystery, the word

mystery cannot be applied to *moral truth*, any more than obscurity can be applied to light. The God in whom we believe is a God of moral truth, and not a God of mystery or obscurity. Mystery is the antagonist of truth. It is a fog of human invention, that obscures truth, and represents it in distortion. Truth never envelopes *itself* in mystery; and the mystery in which it is at any time enveloped, is the work of its antagonist, and never of itself.

Religion, therefore, being the belief of a God, and the practice of moral truth, cannot have connection with mystery. The belief of a God, so far from having any thing of mystery in it, is of all beliefs the most easy, because it arises to us, as is before observed, out of necessity. And the practice of moral truth, or, in other words, a practical imitation of the moral goodness of God, is no other than our acting towards each other as he acts benignly towards all. We cannot *serve* God in the manner we serve those who cannot do without such service; and, therefore, the only idea we can have of serving God, is that of contributing to the happiness of the living creation that God has made. This cannot be done by retiring ourselves from the society of the world, and spending a recluse life in selfish devotion.

The very nature and design of religion, if I may so express it, prove, even to demonstration, that it must be free from every thing of mystery, and unincumbered with every thing that is mysterious. Religion, considered as a duty, is incumbent upon every living soul alike, and, therefore, must be on a level to the understanding and comprehension of all. Man does not learn religion as he learns the secrets and mysteries of a trade. He learns the theory of religion by reflection. It arises out of the action of his own mind upon the things which he sees, or upon what he may happen to hear or to read, and the practice joins itself thereto.

When men, whether from policy or pious fraud, set up systems of religion incompatible with the word or works of God in the creation, and not only above, but repugnant to human comprehension, they were under the necessity of inventing or adopting a word that should serve as a bar to all questions, inquiries and speculations. The word *mystery* answered this purpose; and thus it has happened that religion, which is in itself without mystery, has been corrupted into a fog of mysteries.

As *mystery* answered all general purposes, *miracle* followed as an occasional auxiliary. The former served to bewilder the mind; the latter to puzzle the senses. The one was the lingo, the other the legerdemain.

But before going further into this subject, it will be proper to inquire what is to be understood by a miracle.

In the same sense that every thing may be said to be a mystery, so also may it be said that every thing is a miracle, and that no one thing is a greater miracle than another. The elephant, though larger, is not a greater miracle than a mite; nor a mountain a greater miracle than an atom. To an almighty power, it is no more difficult to make the one than the other; and no more difficult to make a million of worlds than to make one. Every thing, therefore, is a miracle, in one sense, whilst in the other sense, there is no such thing as a miracle. It is a miracle when compared to our power, and to our comprehension; it is not a miracle compared to the power that performs it; but as nothing in this description conveys the idea that is affixed to the word miracle, it is necessary to carry the inquiry further.

Mankind have conceived to themselves certain laws, by which what they call nature is supposed to act; and that a miracle is something contrary to the operation and effect of those laws, but unless we know the whole extent of those laws, and of what are commonly called the powers of nature, we are not able to judge whether any thing that may appear to us wonderful or miraculous, be within, or be beyond, or be contrary to, her natural power of acting.

The ascension of a man several miles high into the air, would have every thing in it that constitutes the idea of a miracle, if it were not known that a species of air can be generated several times lighter than the common atmospheric air, and yet possess elasticity enough to prevent the balloon, in which that light air is enclosed, from being compressed into as many times less bulk, by the common air that surrounds it. In like manner, extracting flames or sparks of fire from the human body, as visible as from a steel struck with a flint, and causing iron or steel to move without any visible agent, would also give the idea of a miracle, if we were not acquainted with electricity and magnetism; so also would many other experiments in natural philosophy, to those who are not acquainted with the subject. The restoring persons to life, who are to appearance dead, as is practised upon drowned persons, would also be a miracle, if it were not known that animation is capable of being suspended without being extinct.

Besides these, there are performances by slight of hand, and by persons acting in concert, that have a miraculous appearance, which, when known, are thought nothing of. And, besides these, there are mechanical and optical deceptions. There is now an exhibition in Paris of ghosts or spectres, which, though it is not imposed upon the spectators as a fact, has an astonishing appearance. As, therefore, we know not the extent to

which either nature or art can go, there is no criterion to determine what a miracle is; and mankind, in giving credit to appearances, under the idea of their being miracles, are subject to be continually imposed upon.

Since then appearances are so capable of deceiving, and things not real have a strong resemblance to things that are, nothing can be more inconsistent than to suppose that the Almighty would make use of means, such as are called miracles, that would subject the person who performed them to the suspicion of being an impostor, and the person who related them to be suspected of lying, and the doctrine intended to be supported thereby to be suspected as a fabulous invention.

Of all the modes of evidence that ever were intended to obtain belief to any system or opinion to which the name of religion has been given, that of miracle, however successful the imposition may have been, is the most inconsistent. For, in the first place, whenever recourse is had to show, for the purpose of procuring that belief, (for a miracle, under any idea of the word, is a show,) it implies a lameness or weakness in the doctrine that is preached. And, in the second place, it is degrading the Almighty into the character of a show-man, playing tricks to amuse and make the people stare and wonder. It is also the most equivocal sort of evidence that can be set up; for the belief is not to depend upon the thing called a miracle, but upon the credit of the reporter, who says that he saw it; and, therefore, the thing, were it true, would have no better chance of being believed than if it were a lie.

Suppose I were to say, that when I sat down to write this book, a hand presented itself in the air, took up the pen and wrote every word that is herein written; would any body believe me? Certainly they would not. Would they believe me a whit the more if the thing had been a fact; certainly they would not. Since then a real miracle, were it to happen, would be subject to the same fate as the falsehood, the inconsistency becomes the greater, of supposing the Almighty would make use of means that would not answer the purpose for which they were intended, even if they were real.

If we are to suppose a miracle to be something so entirely out of the course of what is called nature, that she must go out of that course to accomplish it, and we see an account given of such miracle by the person who said he saw it, it raises a question in the mind very easily decided, which is, is it more probable that nature should go out of her course, or that a man should tell a lie? We have never seen, in our time, nature go out of her course; but we have good reason to believe that millions of lies

have been told in the same time; it is, therefore, at least millions to one, that the reporter of a miracle tells a lie.

The story of the whale swallowing Jonah, though a whale is large enough to do it, borders greatly on the marvellous; but it would have approached nearer to the idea of miracle, if Jonah had swallowed the whale. In this, which may serve for all cases of miracles, the matter would decide itself, as before stated, namely, is it more probable that a man should have swallowed a whale or told a lie.

But supposing that Jonah had really swallowed the whale, and gone with it in his belly to Ninevah, and to convince the people that it was true, have cast it up in their sight, of the full length and size of a whale, would they not have believed him to have been the devil, instead of a prophet? or, if the whale had carried Jonah to Ninevah, and cast him up in the same public manner, would they not have believed the whale to have been the devil, and Jonah one of his imps.

The most extraordinary of all the things called miracles, related in the New Testament, is that of the devil flying away with Jesus Christ, and carrying him to the top of a high mountain; and to the top of the highest pinnacle of the temple, and showing him and promising to him *all the kingdoms of the world*. How happened it that he did not discover America; or is it only with *kingdoms* that his sooty highness has any interest?

I have too much respect for the moral character of Christ, to believe that he told this whale of a miracle himself: neither is it easy to account for what purpose it could have been fabricated, unless it were to impose upon the connoisseurs of miracles, as is sometimes practised upon the connoisseurs of Queen Anne's far things, and collectors of relics and antiquities; or to render the belief of miracles, ridiculous, by outdoing miracles, as Don Quixotte outdid chivalry; or to embarrass the belief of miracles, by making it doubtful by what power, whether of God or the Devil, any thing called a miracle was performed. It requires, however, a great deal of faith in the devil to believe this miracle.

In every point of view in which those things called miracles can be placed and considered, the reality of them is improbable, and their existence unnecessary. They would not, as before observed, answer any useful purpose, even if they were true; for it is more difficult to obtain belief to a miracle, than to a principle evidently moral, without any miracle. Moral principle speaks universally for itself. Miracle could be but a thing of the moment, and seen but by a few; after this it requires a transfer of faith from God to man to believe a miracle upon man's report. Instead,

therefore, of admitting the recitals of miracles as evidence of any system of religion being true, they ought to be considered as symptoms of its being fabulous. It is necessary to the full and upright character of truth that it rejects the crutch; and it is consistent with the character of fable, to seek the aid that truth rejects. Thus much for mystery and miracle.

As mystery and miracle took charge of the past and the present, prophesy took charge of the future, and rounded the tenses of faith. It was not sufficient to know what had been done, but what would be done. The supposed prophet was the supposed historian of times to come; and if he happened, in shooting with a long bow of a thousand years, to strike within a thousand miles of a mark, the ingenuity of posterity could make it point-blank; and if he happened to be directly wrong, it was only to suppose, as in the case of Jonah and Ninevah, that God had repented himself and changed his mind. What a fool do fabulous systems make of man!

It has been shown, in a former part of this work, that the original meaning of the words *prophet* and *prophesying* has been changed, and that a prophet, in the sense of the word as now used, is a creature of modern invention; and it is owing to this change in the meaning of the words, that the flights and metaphors of the Jewish poets, and phrases and expressions now rendered obscure, by our not being acquainted with the local circumstances to which they applied at the time they were used, have been erected into prophecies, and made to bend to explanations, at the will and whimsical conceits of sectaries, expounders and commentators. Every thing unintelligible was prophetic, and every thing insignificant was typical. A blunder would have served as a prophecy; and a dish-clout for a type.

If by a prophet we are to suppose a man, to whom the Almighty communicated some event that would take place in future, either there were such men, or there were not. If there were, it is consistent to believe that the event so communicated, would be told in terms that could be understood; and not related in such a loose and obscure manner as to be out of the comprehensions of those that heard it, and so equivocal as to fit almost any circumstance that might happen afterwards. It is conceiving very irreverently of the Almighty, to suppose he would deal in this jesting manner with mankind; yet all the things called prophecies in the book called the Bible, come under this description.

But it is with prophecy as it is with miracle; it could not answer the purpose even if it were real. Those to whom a prophecy should be told, could not tell whether the man prophesied or lied, or whether it had been

revealed to him, or whether he conceited it; and if the thing that he prophesied, or intended to prophecy, should happen, or something like it, among the multitude of things that are daily happening, nobody could again know whether he foreknew it, or guessed at it, or whether it was accidental. A prophet, therefore, is a character useless and unnecessary; and the safe side of the case is, to guard against being imposed upon by not giving credit to such relations.

Upon the whole, mystery, miracle, and prophecy, are appendages that belong to fabulous and not to true religion. They are the means by which so many *Lo heres!* and *Lo theres!* have been spread about the world, and religion been made into a trade. The success of one imposter gave encouragement to another, and the quieting salvo of doing *some good* by keeping up a *pious fraud* protected them from remorse.

Having now extended the subject to a greater length than I first intended, I shall bring it to a close by abstracting a summary from the whole.

First—That the idea or belief of a word of God existing in print, or in writing, or in speech, is inconsistent in itself for reasons already assigned. These reasons, among many others, are the want of an universal language; the mutability of language; the errors to which translations are subject; the possibility of totally suppressing such a word; the probability of altering it, or of fabricating the whole, and imposing it upon the world.

Secondly—That the Creation we behold is the real and ever existing word of God, in which we cannot be deceived. It proclaims his power, it demonstrates his wisdom, it manifests his goodness and beneficence.

Thirdly—That the moral duty of man consists in imitating the moral goodness and beneficence of God manifested in the creation towards all his creatures. That seeing as we daily do the goodness of God to all men, it is an example calling upon all men to practise the same towards each other; and, consequently, that every thing of persecution and revenge between man and man, and every thing of cruelty to animals, is a violation of moral duty.

I trouble not myself about the manner of future existence. I content myself with believing, even to positive conviction, that the power that gave me existence is able to continue it, in any form and manner he pleases, either with or without this body; and it appears more probable to me that I shall continue to exist hereafter, than that I should have had existence, as I now have, before that existence began.

It is certain that, in one point, all nations of the earth and all religions

agree; all believe in a God; the things in which they disagree, are the redundancies annexed to that belief; and, therefore, if ever an universal religion should prevail, it will not be believing any thing new, but in getting rid of redundancies, and believing as man believed at first. Adam, if ever there was such a man, was created a Deist; but in the mean time, let every man follow, as he has a right to do, the religion and the worship he prefers.

Paine, shortly after his release from prison, wrote a second part to *The Age of Reason*. In this, he adds little to the searching moral inquiry of the first part, and his dissection of the Bible has only an antique interest today. Only the first part is included here, and it should be noted that it is the first part which is usually referred to when one speaks of *The Age of Reason*.

❖ FIVE ❖

Letter to Washington

IN presenting Paine's *Letter to Washington*, it pays to speculate once more on how different his career would have been had he remained in America and played his part in the great struggle for democracy and against the Hamiltonians that Jefferson led. Had he done so, he would have understood, as Jefferson so well did, how innocent Washington was of any complicity in the Federalist plot to destroy the republic; he would have recognized, along with Jefferson, the lonely and rather forlorn devotion of the President to the United States. And he would have known, as Jefferson knew so well, how the Federalist plotters, led by Alexander Hamilton and Aaron Burr and John Adams, traduced and falsified, for America, the nature of the revolution in France.

But Paine was not in America, and only distance, ill-fortune, and his sufferings in prison can explain his headlong attack upon George Washington. Remember that Paine adored Washington; that during the revolution they were comrades in arms; that again and again Paine proclaimed his immense esteem of the commander-in-chief. Remember that Paine dedicated *Rights of Man* to Washington. But remember this, too, that after the American Constitutional Convention, the Federalists, a thoroughly unprincipled and reactionary group of men, gained control of the country, swindling the old soldiers, attacking the patriots, using the Supreme Court as the first step to set up a dictatorship, dealing illegally with foreign governments, plotting, buying, selling, working so fervently to wreck the American Republic that a second revolution was needed to drive them to their holes.

And remember that Paine saw this from France. When America could have supported France whole-heartedly and perhaps changed the future bloody history of Europe, Paine saw America, under the Federalists, betray France and abandon her. It would have taken a Paine as objective as the man he had been a decade before to separate Washington from the men around him; and Paine was not the same man he had been once. Moreover when, during his long imprisonment, Paine appealed again and again for help to the country he had once served, he was as often refused, and allowed to languish, fall sick, and join the list of victims for whom the guillotine waited. This was actually the doing of Gouverneur Morris, an old personal enemy of Paine. Washington was in no way involved, nor is it likely that he knew the truth of Paine's imprisonment; but Paine, after all his suffering, could not believe that Washington had not deliberately deserted him.

Keep all of that in mind as you read Paine's letter to Washington. Accept the clear and damning indictment of the Federalists, for that was the old Paine, mourning the rise of reaction in a country he had once fought for; but understand that when he speaks of Washington, Tom Paine is an old and sickly man, who, abandoned by all, turned on a great good man who was once his comrade.

TO GEORGE WASHINGTON,
PRESIDENT OF THE UNITED STATES.

Paris, September 20, 1795.

SIR,

I had written you a letter by Mr. Letombe, French consul, but, at the request of Mr. Monroe, I withdrew it, and the letter is still by me. I was the more easily prevailed upon to do this, as it was then my intention to have returned to America the latter end of the present year (1795;) but the illness I now suffer prevents me. In case I had come, I should have applied to you for such parts of your official letters (and your private ones, if you had chosen to give them) as contained any instructions or directions either to Mr. Monroe, to Mr. Morris, or to any other person, respecting me; for after you were informed of my imprisonment in France, it was incumbent on you to have made some enquiry into the cause, as you might very well conclude that I had not the opportunity of

informing you of it. I cannot understand your silence upon this subject upon any other ground, than as connivance at my imprisonment; and this is the manner it is understood here, and will be understood in America, unless you will give me authority for contradicting it. I therefore write you this letter, to propose to you to send me copies of any letters you have written, that I may remove this suspicion. In the preface to the Second Part of the *Age of Reason*, I have given a memorandum from the hand-writing of Robespierre, in which he proposed a degree of accusation against me, "*for the interest of America as well as of France.*" He could have no cause for putting America in the case, but by interpreting the silence of the American government into connivance and consent. I was imprisoned on the ground of being born in England; and your silence in not enquiring the cause of that imprisonment, and reclaiming me against it, was tacitly giving me up. I ought not to have suspected you of treachery; but whether I recover from the illness I now suffer, or not, I shall continue to think you treacherous, till you give me cause to think otherwise. I am sure you would have found yourself more at your ease, had you acted by me as you ought; for whether your desertion of me was intended to gratify the English government, or to let me fall into destruction in France, that you might exclaim the louder against the French revolution; or whether you hoped by my extinction to meet with less opposition in mounting up the American government; either of these will involve you in reproach you will not easily shake off.

THOMAS PAINE.

Here follows the letter above alluded to, which had been withdrawn:

TO GEORGE WASHINGTON,
PRESIDENT OF THE UNITED STATES.

Paris, February 22, 1795.

SIR,

As it is always painful to reproach those one would wish to respect, it is not without some difficulty that I have taken the resolution to write to you. The danger to which I have been exposed cannot have been unknown to you, and the guarded silence you have observed upon that circumstance, is what I ought not to have expected from you, either as a friend or as President of the United States.

"You knew enough of my character, to be assured that I could not have deserved imprisonment in France; and, without knowing any thing more

than this, you had sufficient ground to have taken some interest for my safety. Every motive arising from recollection ought to have suggested to you the consistency of such a measure. But I cannot find that you have so much as directed an enquiry to be made whether I was in prison or at liberty, dead or alive; what the cause of that imprisonment was, or whether there was any service or assistance you could render. Is this what I ought to have expected from America, after the part I have acted towards her? Or will it redound to her honor or to your's that I tell the story? I do not hesitate to say, that you have not served America with more fidelity, or greater zeal, or more disinterestedness, than myself, and perhaps not with better effect. After the revolution of America had been established, you rested at home to partake its advantages, and I ventured into new scenes of difficulty to extend the principles which that revolution had produced. In the progress of events, you beheld yourself a president in America, and me a prisoner in France; you folded your arms, forgot your friend, and became silent.

"As every thing I have been doing in Europe was connected with my wishes for the prosperity of America, I ought to be the more surprised at this conduct on the part of her government. It leaves me but one mode of explanation, which is, *that every thing is not as it ought to be amongst you*, and that the presence of a man who might disapprove, and who had credit enough with the country to be heard and believed, was not wished for. This was the operating motive with the despotic faction that imprisoned me in France, (though the pretence was, that I was a foreigner,) and those that have been silent and inactive towards me in America, appear to me to have acted from the same motive. It is impossible for me to discover any other.

"After the part I have taken in the revolution of America, it is natural that I feel interested in whatever relates to her character and prosperity. Though I am not on the spot to see what is immediately acting there, I see some part of what she is acting in Europe. For your own sake, as well as for that of America, I was both surprised and concerned at the appointment of Gouverneur Morris, to be Minister to France. His conduct has proved, that the opinion I had formed of that appointment was well founded. I wrote that opinion to Mr. Jefferson at the time, and I was frank enough to say the same thing to Morris, that *it was an unfortunate appointment*. His prating, insignificant pomposity rendered him at once offensive, suspected, and ridiculous; and his total neglect of all business, had so disgusted the Americans, that they proposed drawing up a protest against him. He carried this neglect to such an extreme, that it was neces-

sary to inform him of it; and I asked him one day, *if he did not feel himself ashamed to take the money of the country, and do nothing for it?* But Morris is so fond of profit and voluptuousness, that he cares nothing about character. Had he not been removed at the time he was, I think his conduct would have precipitated the two countries into a rupture; and in this case, hated *systematically* as America is, and ever will be, by the British government, and at the same time suspected by France, the commerce of America would have fallen a prey to both.

If the inconsistent conduct of Morris exposed the interest of America to some hazard in France, the pusillanimous conduct of Mr. Jay in England has rendered the American government contemptible in Europe. Is it possible that any man, who has contributed to the independence of America, and to free her from the tyranny and injustice of the British government, can read without shame and indignation the note of Jay to Grenville? It is a satire upon the Declaration of Independence, and an encouragement to the British government to treat America with contempt. At the time this minister of petitions was acting this miserable part, he had every means in his hands to enable him to have done his business as he ought. The success or failure of his mission depended upon the success or failure of the French arms. Had France failed, Mr. Jay might have put his humble petition in his pocket, and gone home. The case happened to be otherwise, and he has sacrificed the honor, and perhaps the advantage of it, by turning petitioner. I take it for granted, that he was sent over to demand indemnification for the captured property; and, in this case, if he thought he wanted a preamble to his demand, he might have said, "That, though the government of England might suppose itself under the necessity of seizing American property bound to France, yet that supposed necessity could not preclude indemnification to the proprietors, who, acting under the authority of their own government, were not accountable to any other." But Mr. Jay sets out with an implied recognition of the right of the British government to seize and condemn: for he enters his complaint against the *irregularity* of the seizures, and the condemnation, as if they were reprehensible only by not being conformable to the terms of the proclamation under which they were seized. Instead of being the envoy of a government, he goes over like a lawyer to demand a new trial. I can hardly help thinking that Grenville wrote that note himself, and Jay signed it; for the style of it is domestic and not diplomatic. The term, *his Majesty*, used without any descriptive epithet, always signifies the King whom the minister represents. If this sinking of the demand into a petition was a juggle between Grenville and

Jay to cover the indemnification, I think it will end in another juggle, that of never paying the money; and be made use of afterwards to preclude the right of demanding it: for Mr. Jay has virtually disowned the right by appealing to the *magnanimity of his Majesty against the capturers*. He has made this magnanimous Majesty the umpire in the case, and the government of the United States must abide by the decision. If, Sir, I turn some part of this business into ridicule, it is to avoid the unpleasant sensation of serious indignation.

"Among other things which I confess I do not understand, is your proclamation of neutrality. This has always appeared to me as an assumption on the part of the executive. But passing this over, as a disputable case, and considering it only as political, the consequence has been that of sustaining the losses of war, without the balance of reprisals. When the profession of neutrality, on the part of America, was answered by hostilities on the part of Britain, the object and intention of that neutrality existed no longer; and to maintain it after this, was not only to encourage farther insults and depredations, but was an informal breach of neutrality towards France, by passively contributing to the aid of her enemy. That the government of England considered the American government as pusillanimous, is evident from the increasing insolence of the conduct of the former towards the latter, till the affair of General Wayne. She then saw that it might be possible to kick a government into some degree of spirit. So far as the proclamation of neutrality was intended to prevent a dissolute spirit of privateering in America under foreign colors, it was undoubtedly laudable; but to continue it as a government neutrality, after the commerce of America was made war upon, was submission and not neutrality. I have heard so much about this thing called neutrality, that I know not if the ungenerous and dishonorable silence (for I must call it such,) that has been observed by your part of the government towards me, during my imprisonment, has not in some measure arisen from that policy.

"Though I have written you this letter, you ought not to suppose it has been an agreeable undertaking to me. On the contrary, I assure you, it has caused me some disquietude. I am sorry you have given me cause to do it; for, as I have always remembered your former friendship with pleasure, I suffer a loss by your depriving me of that sentiment.

THOMAS PAINE.

❖ SIX ❖

Tom Paine: an Estimate

WHEN all is said and done, how are we to assess Thomas Paine? As a writer, for clarity, for forceful prose, and for the straight-forward and reasonable statement of an idea, he had few if any contemporary equals. Not even Jefferson could phrase an abstraction so well in words the average person would understand.

Paine broke with the writing traditions of his day and struck out in a bold and homely style; yet in conjunction with the content, from which it cannot be separated, he bears comparison with any writer of his times. He wrote for the people, deliberately, and thereby created works that have long outlived those of writers who scorned a broad audience. What he lacked in grace, he made up for with his tremendous sincerity. He was a writer who loved people, and that love comes through his words.

As a political thinker, Paine worked with the ideas of his time, activating theories which existed rather than setting out to discover new ones. His greatest personal contribution was the plan for social security which he proposed in *Rights of Man*. But he was more interested in taking the democratic method out of the vault and airing it in full view than in discovering new philosophies. The tremendous circulation of his political writing indicates that he influenced more people than any of those writers upon whom he drew.

As a pamphleteer, he has had no equal. There is no other case in history of a great people's movement finding its voice in one man, and finding it so clearly and decisively. There is no other case where one man created so large a proportion of the fighting slogans

of a revolution. There is no other case where a whole nation rallied to a single book, and united on the basis of its plea.

Paine has that rare historical distinction of being unique; there are no comparisons, because there has been no one, before him or since, quite like him. He had the fortune to arrive in the right place at the right time, and once there, he accepted history instead of attempting to avoid it.

As a man, Paine was more than most men, less than some. Tall, powerful, a pair of wide, sloping shoulders, a hooked nose, slanting brown eyes—he was the very opposite of the “dirty little atheist” Theodore Roosevelt once called him without ever having read *The Age of Reason*. Paine was driven by a flame inside him; on issues he believed in, he was absolutely unequivocal, and perhaps his greatest failing was his inability to compromise. He was more than generous; money meant nothing to him. He never refused an appeal for help, and he neither admired nor envied the ability to create a fortune.

In later life, seeing that his much-dreamed-of utopia and brotherhood of man would not be realized for perhaps many, many generations, he fell back upon a somewhat mystical conception of the omnipresence and goodness of God, but until then his materialistic objectivity was amazing for his time. Even at the very end, tortured upon his deathbed by bigots who begged him to recant—though God knows what he had to recant—he held firm. Death had no terrors for him.

To the very end, he clung to his conception of a world that changes constantly, an evolution of society—not a haphazard evolution, but an evolution proposed and forwarded by working individuals.

He had that wonderful grasp of history in perspective that is granted to so few men. He summed up historic situations in terms of their dynamic factors, not in terms of silly platitudes—as so many so-called statesmen do today. And always, in all he wrote, was the concept of forces aligned against each other, of movement and change.

He was a good man and a great man—one who will be remembered long after those who attacked and slandered him are dead and forgotten.
