The measurements of tablets are given in millimeters. The sequence is height by width by thickness.

The room numbers refer to Starr, *Nuzi*, vol. II, plans Nos. 13, 30, and 34. (Cf. Harvard Semitic Series, vol. XIV, pp. xix-xx)

The abbreviation S.I. stands for "seal impression."

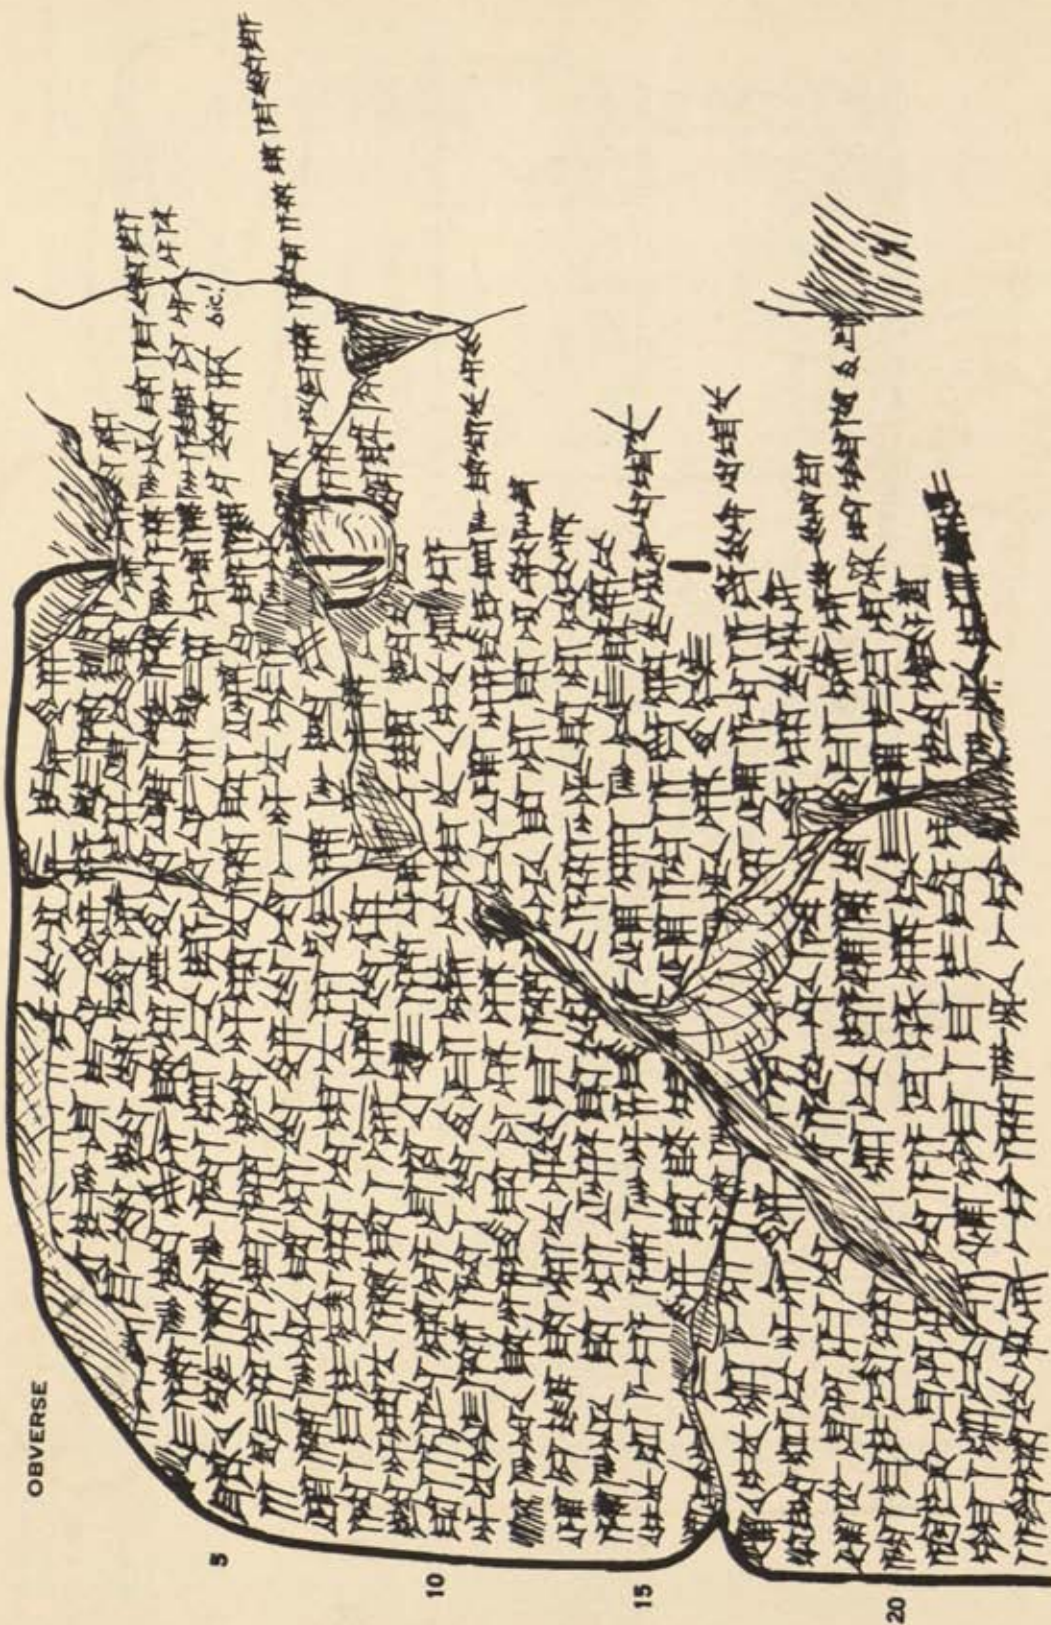

As was the case for the preceding volumes (cf. Harvard Semitic Series, vol. XIV, p. v), these texts have been copied through the course of many years. Improvements in the technique of copying have been made. The difficulty mentioned in Harvard Semitic Series, vol. XIV, p. v, was not completely solved even then. Many "reverse overlaps" were missed in volumes XIV and XV. To a large extent the main difficulty was due to the fact that nobody besides me collated the copies with the originals. The fact that the tablets were photographed in six different positions also contributed greatly to the omission of some "overlaps." Ten years ago I began experimenting with latex molds. Accidentally I discovered that the latex mold could be slightly stretched flat on a board (as one stretches an animal skin for drying). From this I was able to make a flat plaster cast. Thus it was possible to take a single photograph of the whole document. The result was that nothing could be omitted in tracing the signs on the photograph. The distortion due to stretching the latex mold was so small (an average of one percent of the width and height) as to be hardly noticeable to the naked eye. Texts Nos. 27, 29, 30, etc., were copied this way.

The same kind of "gummed stickers" were used to indicate the various parts of the texts as in previous volumes. An abbreviated style is used, but its meaning should be plain to all assyriologists. The notation "sic!" has been used only in the extreme forms of scribal mistakes; other strange "graphies" speak for themselves.
